osophical or historical teaching of a

tian sparrows, convinced henceforth, even more than the pagans, of the futility of this stone-throwing sacred elequence in the pursuit of political and social problems."

Still monther phase of the matter is taken up by the Messaggere, which insunates that the protesting bishops and Catholics have no standing before parliament since they refuse to participate in the parliamentary elections.—Translations made for THE LITERAY DIGEST.

#### THE CASE OF DOCTOR SPAHN.

THE case of Dr. Spahn is one that has aroused a sharp debate in Germany, and one that has important political, religious, and educational bearings. The facts of the case, which have already appeared in foreign despatches to this country, are thus stated in the London Times.

"The appointment of Dr. Spahn to the chair of history at Strasbourg University, a selection which was avowedly influenced by the fact that Professor Spahn is a Roman Catholic, has drawn forth a visor

"Revite one another all you please, only obey

"Revite one another all you please, only obey orders." — Der Wahre Jakob (Siutigari).

professor belonging to another religious denomination. A Roman Catholic statement of the case is made by Monsignor A. Kannengieser in the Correspondant (Paris):

"Some months ago Mr. Varrentrapp, professor of modern history at the University of Strasbourg, left Alsace to fill a similar chair at the University of Marburg. The faculty of philosophy, in virtue of the right of presentation which it had exercised from the beginning, proposed to the Government the following list of four names: Marcks, Schäfer, Meinecke, Rachfahl. It was from these caudidates that the governor of the imperial territory was to choose Mr. Varrentrapp's successor. Thus precedent inclined. But toward the end of the vacations an unexpected piece of news astonished the university nuthorities of Strasbourg. The Government named Mr. Meinecke, it is true, who is a Protestant, but at the same time it created a second chair of modern history, and this it gave to Dr. Spahn, who is a Catholic, Spahn's nomination greatly irritated the professors of the Alsatian University. Was it because they are all Protestants-with one exception-in a province where four-fifths of the population profess Catholicism? Did the presence of this introder constitute a menace in their eyes? At any rate, they resolved to defend themselves energetically against everybody and everything."

The controversy over the case, which has become quite acrimonious, has had a teudency, according to the Frankfurter Zeitung, to crystallize around the expression "investigation without presumptions" (voraussetzungslose Forschung), which the great historian Momnisen made use of in his protest. On this point the Nation (Berlin) says.

"The listory of the continuous development of mankind is a mirrored picture of the development of human investigation, and every restraint upon free investigation means an impediment to human development."

The remonstratics of one German university after another against the manuer of Dr. Spalm's appointment have caused prolonged editorial debate, the secular press generally condemning it and the Roman Catholic papers defending it. The Paris Temps brings out a neglected aspect of the whole subject thus:

"Dr. Spahn was chosen against the wishes of his future colleagues for the purpose of giving Abstuan Catholics a satisfaction that they are too patriotic, too much attached to the cause of protest and to the French academic tradition to accept,"—Translations made for The LITERARY PROSES.

# THE GERMAN PRESS ON THE BOER PEACE FIASCO.

GERMAN newspapers are dealing severely with Eugland because of her rebuff to Holland when that small Power tried to get peace for the Boers. The clerical Germania (Berlin) says:

"There was no illusion on the part of the Boers with reference to the prospect of success of the Dutch intervention. Now that absolute certainty on the subject has been arrived at, the Boers, will cling more frimly than ever to the conviction that the fierce struggle must be kept up without compromise, seeing that a satstactory solution can be reached only in this way."

"So the war must go on," says the Deutsches Tages-Zeitung (Berlin), adding:

"But we will learn very little about it. Lord Kitchener mainstains schene concerning everything that takes place on the scool of war; at least as much as possible is suppressed. In this arts of silence he will have become a master by the time King Edward puts on the coronation role. Then, some morning, the war will be declared at an end. The Buers will in the field will be turn-

BRITANNIA: "Is i) peace?"

["A communication was received late on Saturday night, January 95, from the Dutch
Government, which is now under consideration."]

—Plunch (London).

claimed bandits and King Edward will have himself hailed as a prince of peace. If only the wicked Boers refrain from firing too powerful a salute on coronation day!"

There is still a faint hope that peace will result from the Dutch effort, according to the somewhat oracularly expressed opinion of the Vessische Zeitung (Berlin). A generally untirendly attitude is assumed by the Isamburger Na. hrichten, and the Kreuz Zeitung (Berlin) expresses itself in a way to be expected from that uncompromising opponent of England and all things English. A paper friendly to England, the Kölnische Zeitung, savs:

"The inference is inevitable from the tone of the published notes, that the English Government is not displeased at the Dutch action. This action may lead before very long to peace overtures from the fighting Boers in Africa."—Translations madel for Tile Literary Dieses.

# PROGRESS OF THE POLITICAL CAMPAIGN IN FRANCE.

A TERSE summing up of the outlook of the impending great struggle in France is thus presented by the London

"The French general elections are now understood to be fixed ro April 27, while the second ballots will be held on May 11. The success of the present Government depends entirely upon the attitude of the great towns. Parts, which is now overwhelmingly Nationalist, is notoriously changeable in its vote, and it is said, with what accuracy we can not determine, that the increase of rates under the new town councils may affect the decision of the opping in the optimization of the principal factors of the election will be the activity of registration and the percentage of absentions."

Another non-French view, that of the Frankfurter Zeitung, is to the effect that the clericals will fight desperately because the Waldeck-Rousseau ministry, if successful, tutends to revolutionize the school system:

"In clerical reactionary circles there is the clearest perception of the vital importance of the coming elections to their own inter-

ests. Once clericalism loses the French schools, it might as well give France up for lost, so far as clericalism is concerned. Hence the strenuous activity of the clericals in the contest."

"As the date of the election draws nearer, it seems that most of the political parties have no other aim thin to emphasize their intolerance," says the Journal des Dibats (Paria), which attacks the Radicals fercely. The Radicals, by combining with the Socialists, give the Waldeck-Ronsseau ministry its majority. Hence the significance attached by the clerical Correspondant (Paris) to the defeat just sustained by the Socialists in the municipal electrons at Roubaux, their strongholds.

"We have just seen at Roubsix what can be accomplished by a minou of good citizens. Through the persevering effort of an association whose name alone was an appeal to bonest men of all association whose tunne alone was an appeal to bonest men of an association whose tunne alone was an appeal to bonest men of all butter. The moderates have ejected the collectivist municipal Moute, the moderates have ejected the collectivist municipal was read of good men everywhere! May this union, so well named 'social and patriotic,' be formed in all the departments and exercise the same energy in winning the same victories! Musical excitation was alone which may be alone to the same through the same than the same through through the same through through the same through through the same through the same throu

The Temps: (Paris), (avorable to the moderate Republicans (a group not represented in the Waldeck-Ronsseau majority of the montent), calls attention to another Socialist defeat in a local election at Carvin, and infers that the ministry is in a perious position.—Translations made for THE LITERARY DIOSING.

#### PRINCE HENRY AND THE MODERN SPIRIT.

N OT one of the predecessors of William II. would have dreamed of sanctioning the visit of Prince Henry to these shores, according to German editorial opinion. Says the Berlin Nation:

"Dynastie prejudices, feelings of antipathy against the repubrussian monarchs from taking such a step. Many as are the eriticisms of the present governing power [Emperor William], it contains, nevertheless, an element of free modern spirit, and this

-Prom L'Illustration (Paris).

element asserts itself again and ågain. Thus we advance by fits and starts. It would be both desirable and advantageous if this astonishing episode became characteristic of our government policy."

The Hamburger Nachrichten, which is spokenman for the papers which express themselves as displacead with Price Henry's trip, calls attention to English statements that the visit was forced on President Roosevelt. It asks that the official papers deny this. The Kreuz Zeitung (Berlin,) nitra-monarchical and conservatively agrarian, says:

"In Germany nothing is known of the alleged displeasure at Prince Henry's journey to America. But the Jewish agents and newspapers assert that this displeasure, which they themselves have discovered, has made a product impression nop nubble opinion in North Americat. "Why should the Agrarians be displeased at Prince Henry's trip to America? . . . It is preisely in North Americat that the actomishing success of a strong protection policy will stare him in the face. The facts speak so loud in this regard that even the North American financial and industrial magnates can not blink them in the event of their meeting Prince Henry, as is designed, on the occasion of a ban-

The same paper takes the Reviner Tageblatt sternly to take for saying that Prince Henry, by thus coming in contact with leading Americans, will "learn everything worth knowing about America." Does the Reviner Tageblatt, asks the Kreuz Zeitung, think Prince Henry will come home as a friend of trusts, corners, and stock-jobbing? The Pester-Lioyd (Budapest) adduces facts to show that Prussia always sympathized with American ideas.

"An anecdote relates that Frederick the Great sent to George Washington, the winner of American independence, a sword inscribed: 'The oldent general to the greatest.' The story may be true or not. It shows, however, that Germany, that Frussia, icid from the very beginning hearty sympathy for the American Joine. This is shown more clearly by fact than by assection. The shown that the shown that the short of the short o

#### HOODWINKING THE REICHSTAG INTO BUILD-ING A NAVY.

The charge that the German Government deceived the Recibstag in connection with the movement to build up a great imperial navy is made by the Social-Demoratic Vorwarts (Berlin). The disclosures have made a sensation, for they are to the effect that when the present shiphuilding program expires in 1904, a new bill, containing the clauses of the bill of 1900, which were rejected by the Reichstag, will be introduced. Verendrit saws.

"In order to deceive the representatives of the people, the real naval program was kept secret, as was done in its Mill the large of the program was kept secret, as was done in its Mill the large of the program was the program with the long-planned but Jesutically concealed "corganization" of the home service, the Government demands an increase of the foreign fleet. This increase was demanded as far back as 1900, but the carrying out of that program was not to begin until 1906."

The denial by Admiral von Tripits, the secretary of the admiralty, of any intention to deceive the Reichstag, and his allegation that Vorwarts got its information from stolen documents, have caused a warm press discussion. Says the Hamburger Nachrickher,

"The outry of the Vorwarfs over 'the fearful picture of moral depravity presented by the Machiavellian naval absolutism in its dealings with the Reichstag and with the people, 'is based upon untruth, if no upon hypoersy, and is designed merely to deep public opinion. But even if the Government land kept its plans secret, there would have been no occasion to reproach it."

"The members of the Reichstag have to deal with the voters and with their political opponents," declares the Deutische Zeittung, "and this fact fully justifies the Government in refraing from imparting its plans to every passing breeze." This paper adds:

"Furthermore, the Government may have secret political reassons for the amplification of its original demands. These reasons need not be known to more than twenty-eight individuals in all the land, unless there is absolute necessity for it. Bismarck disclosed his ends only step by step. As long as politics remains oplitics, there will be no except from these conditions. For the future let nothing distingenuous be undertaken, but let discretion and the secrecy of politics be maintained better than ever."

The Radical and Socialist papers denounce what they term the dishonesty of these dealings. The Germania, organ of the Roman Catholic Center party, says "an unpleasant feeling has resulted from the acknowledgment that the admiralty deceived the Reichstag through apprehension lest its plan fail."—Translations made for The LITERAS DIGEST.

#### THE ENGLISH REMOUNT SCANDAL,

THE origin of the charges against British officers involving them in alleged dishonest purchases of horses for use in the Boer war is thus stated in The Standard (London):

"In June of last year, Sir Blundell Maple asked for a committee of inquiry into what be described as 'the swindles that are taking place in South Africa in connection with the horses purchased in Budapest and Vienna. 'The hon, member asserted, from his place in the House of Commons, that the difference in the price at which these horses were purchased and the price at which they were sold to the Government left, as much as Zioor Zao per horse, which was divided among those who purchased them.' The horses, he added, were 'the worst that could be picked np off the streets,' and the use of such inferior horses and 'resulted in the death of hundreds and thousands of our men.' Sir Blundell Maple based his demand for an inquiry on the ground that 'it was insinuated that certain officers in his Majesty's service were mixed up in the swindle.'

The report of the investigating committee, recently issued, is thus summed up by the same paper:

"We bought horses in a panic, and had to pay; we sent inspecting others who could not speak the language of the country—and had to pay; we sent a staff inadequate for the work of dealing rapidly with a large number of borses—and had to pay. That is the whole story as disclosed in this disheartening report,"

The manner in which the investigation committee has done its work displeases the Liberal Daily News (London) which says:

"We wish to speak as kindly as possible of the British officers involved. But we can not help renembering that the poor engine-driver who goes to sleep at his post is severely punished. What, then, about the officers whose neglect and carelessness have not only cost the treasury many thousands of pounds, but have probably led to the loss of many brave lives in South Adrica? We do not wish to advancte excessive severity. But it seems to ns imperative that the whole matter should be probed to the very bottom, and that the persons responsible should at least be removed from their posts. . . But the present House of Commons seems content with any lame excuse for inefficiency, and tho conjeletify outpaced in argument. Mr. Brødrick scored is not quite the same thing as a victory over the Boars. For that purpose good remounts might be more useful.

"If there has been any avoidable cause for the prolongation of the war far beyond what any one imagined possible when it commenced, it has been the powerlessness of our mounted troops to overtake the enemy," declares The St. James's Gazette (London), adding:

"How often have we had to deplore the escape of De Wet, or some other disappointment cansed by our lack of horses or the inferior quality of those we possessed? The committee severely and justly censures the government remount department for an inefficiency and dilatoriness that amply explain the whole long series of complaints on this head."

#### NOTABLE BOOKS OF THE DAY.

#### A NOVELIZED PLAY.

IF I WENE KING. By Justin Huntly McCarthy. Cloth, 156 x 85 in., 160 pp. Price, \$1.50. R. 11. Russell.

N the dear dead days beyond recall, when a man had written a successful play, he set to work to write a better one. These days he spends his time turning his play into a novel,

The reviewer is naturally prejudiced against such a book as this at the outset. The turning of a play into a novel is necessarily a mechani-

cal operation: the motive can only be a commercial one, and the result is not likely to have any interest as literature. That prejudice, as it happens, is amply sustained by the read-ing of "If I Were King." What Mr. McCarthy has done is simply to take the play and pad it out with the necessary description and parrative, all of it conventional and some of it tawdry. This is a sample :

PUSTEN H. MACARTHY.

grown more authoritative. He has

lost some of his buoyancy of manner,

his utterances have become those of

a man who is sure of his audience, confident that those who listen to him

must be interested, and consequently

at less pains to interest them. Mr.

Birrell has always stood among the handful of Anglo-Saxon writers who

can compare, not very favorably it is

true, with the present school of French

essavists and critics. "Essavs and

Addresses " causes one to alter one's

estimate of him. In the first place it

is curiously insular in the topics that it treats of. The reader would have

to be an Englishman, and a church-

man interested in the dormas of the

The play and the play-structure are, of course, obvious through the book. The stage photographs with their bald realism contribute still more to the effect, and some bad wash-drawings do not help the mat-

There is generally a commercial atmosphere about the volume. The reader is probably familiar with the play, which Mr. Sothern recently made a success. It is the familiar historical romance, the hero in this case being the unhappy poet Villon. There is the usual atmosphere of mystery and intrigue, the usual sword-play and love-making, and plenty of "yea sires" and "your majestys."

#### A BOOK ABOUT BOOKS.

ESSAYS AND ADDRESSES. By Augustine Birrell. Cloth, 4% x7 in., soo pp. Price, \$1 oo. Charles Scribner's Sons.

T is now many years since Mr. Augustine Birrell first "found the notion of being read in America fragrant and delightful." Those readers who have followed his work from "Obiter Dieta" through the series of "very little books," will have observed a steady change in the tone of Mr. Birreil's works, which culminates in the last book of his "Essays and Addresses. ' With the passing of the years, Mr. Birrell has

AUGUSTINE AIRRELL.

Church of England, to be interested in two of the essays : " What Then Did Happen at the Reformation?" and "The Christian Evidences." "The Ideal University," "The House of Commons," " Is it Possible to tell a Good Book from a Bad One?" give as nothing new. Suggestiveness is the keynote of the successful essay. It should start a train of thought, and the gist of its own argument be poignant enough to remain with us for a time. In all five of these essays one is conscious of a series of well-balanced sentences. Technically they are so well done that one is only moderately bored by them. But hold the attention closely or compel thought, they do not. The other five essays and addresses are about people and hooks, -John Wesley, Bagehot, Froude, Browning, Sir Robert Peel. These are the work of the Augustine Birrell whom we know. He was always a bravo reader; the sight of an author's collected works, in forty odd volumes, or a single book of some seventeen fat quartos, never for a moment daunted him, as they do less courageous and feebler minds. He even professed to have read many volumes of the writings of Hannah More. But he was younger then, and perhaps the exaggerations of youth lineered around him. He could read any ponderous work and then discourse about it as pithily and as briefly as the book itself was ponderous and diffuse. These five essays are in his old style. They show, perhaps, deeper insight than much of his former work, and the manner in which they are written has a tone a bit more serious than formerly.

#### A BADLY HANDLED MOTIF.

LUKE DELMEGE. By Rev P. A. Sheeban. Cloth, 5% x 8 in., 580 pp. Price, \$1.50. Longmans, Green & Co.

FEARS ago, Maliock conceived an excellent idea for a work of fiction. "Let us take a woman," said he, " who shall have Marie Bashkirtseff's propensity for exposing her inner self to the public, but who shall have interesting things to reveal." He thereupon wrote "A Human Document," a sorry failure, by no means as interesting as the conceited outpourings of the young Russian girl.

The author of "Luke Delmege " has made much the same mistake, and has "gone wrong" elaborately, since he gives the pith of his novel in an "Introductory," and doesn't provide as much mental pabulum la

ali the following pages-nearly 600 in number-a length for a work of fiction of to-day that requires ample justifi-

Father Sheehan, the author, whose first book, "My New Curate," struck clearly and with humorous resonance a new chord, viviscets rather tediously the character of a young priest, he presents this young man as a reserved being, so worn with the problem of life that he greets its solution in his premature death from an accident with an Alleluis of relief. But when the good Father closely follows the career of Luke Dolmeye, the reader feels that it is neither entertaining edifying, nor profitable. Bref, it is the story of a young priest, graduated a "First of First" at Maynooth, who

BAY D A SHEEMAN

goes forth into the world and makes a botch of things. The Roman be either stronger or weaker to admire in this young man, who should Catholic reader will find little to make the long drawn-out portrayal of his career touch the heart.

Father Sheehan is a chauvinist, and his patriotic love of Ireland and the Irish crops out strongly in these pages. This is no ground for censure, but it is a sin in construction to make his hero the buffer for the author's worship of country. Delmege is quite impressed by his own importance after his scholastic triumph at the university, as many a young man would be. But for such a powerful intellect, he has an un-intelligible lack of character and "horse sense." He is a square peg in a round hole almost everywhere, and uitimately, his pride crushed and humllity ground into him, dies in a small benefice, having achieved nothing worth while. "He had found peace by abstracting himself from passing and fading things and fixing his thoughts on the unfading and eternal." He should have started with the corner-stone of such peace in his soul when he accepted consecration as the minister of God to the needs of the laity.

Where the author yields to his strong sense of humor, he is delightful. He presents the Irish character with singular and vivid veracity. There are also some strong episodes in the novel ; notably the eviction of Luke's father from his house, and the ten years' effacement of the pure Barbara Wilson in a House of the Good Shepherd, under the habit of a repentant Magdalen. Her brother, who is wasting away through the opium habit, escapes from her guarding care. In seeking him through London at night, she offers this sacrifice of herself to God if He will give her brother a Christian death. She becomes a saint in her convent, and Luke Delmege, who discovers her there by accident, ten years later, is made an humbie man by her lowhness as contrasted with his pride.

#### CALIFORNIA IN TRANSITION.

IN THE FOOTPRINTS OF THE PADRIS. By Charles Warren Stoddard. Hustrated. Parchment, 5 x 7% in., 335 pp. Price, \$1.50, net. A. M. Rubertson, San Francisco.

ALIFORNIA during the period of its passage from the old form to the new furnishes the theme of this little volume. It is not a record of travel, it is hardly biographical, nor is it a mere bunch of descriptive essays hung together on a thread of personal experience; and yet it suggests something of all these, with a quality of its own that

gives it, an air of uncommon distinction. The book has charm, a claimthat emanates less from the things which the auther has to reliablecating as many of these are—than from his manner of regarding them, his halth of thought, so to space. His skyle is that of the born libraobserver taking a reminissent holiday among the seenes that made up his early lowes and have long shore passed into his mental life.

These observations begin with the year 1855, when San Francisco was six years old and Mr. Stoddard twelve, at which age he removed

CHARLES W. STOPDARD.

with his family from Rochester, N.Y., to join his father in California. The California of that period has been often described; Mr. Stoddard seeks rather to illumine it An ardent Catholle, the warmt of his religious enthusiasm contributes, no doubt, to brighten the achievements of the friars of the order of St. Francis Assisi; yet the figures he gives of their wealth from 1776, when they begun work, to 1825-less than fifty yearswhen the Mexican Government Interfered with them, shows that even from a material point their achievements were remarkable. The wealth was created entirely out of mission industries and the training of Indians to self-supporting trades. In 1846, when interference with them began, the

mission wealth in live-stock, as here set down, was surprising, and besides this there was \$15,000 worth of other merchandise and \$55,000 is specie,

Within one year from the time the Indians were thrust out from mission guardianship, "they went to the dogs and the mission fund ran dry" says the author.

cry, says the author.

The Padres were again requested to take charge of their flocks, but results were never again the .ame. The Mexican Congress began burrowing money from the friars, till in 1831 they lowed them in borrowed money \$1.000,000, and in 1834 the missions were absolutely benniless.

money \$150,000, and in 1845 the missions were absolutely penmiess.

Mr. Stoddard gives a touchingly interesting picture, with photograph,
of the ruined old Mission Dolores, under which sleep all that remains of

of the runed old Mission Diolores, under which sleep all that remains of More interesting doubless to many readers than the story of the Dadres will be the author's pictures, from first-hand knowledge, of popular staffs, granting, etc., in [all motion. After seeing so much of this peculiar life from the viewpoint of newspaper sensation, it is worth the property of the property of

thetic observer, the many reminders of notable people the author has met on what to him is evidently the charmed ground of the Pacific Slope. Among these, considerable space rs given to the story, and also a personal description, of Theresa Longwurth—the Him. Mrs. and the famous description of Theresa Longwurth—the Him. Mrs. and the famous defense of the validity of her marriage, pleaded even before the Ilouse of Lords. Altogether the book is of unusual interest.

#### A STRONG MAN OF THE NORTH WOODS.

THE STRENGTH OF THE HILLS. By Florence Wilkinson. Cloth, 5% x 7% inches, 396 pp. Harper Brothers.

HERE is an American novel, with the smell of the soil clinging to it. Small wonder, for it has been "taken alive" by a trapper of heart and brain, who is furrowing a virgin fancy, if prognosities do not lie. The setting is the North Woods with a dash of New York.

FLORENCE WILKINSON

Miss Wilkinson herself is strong with the strength of the hills. Her portraiture of the Adirondack rcgion is rich and comprehensive. With a delicate sensibility to the "sermons in stones, books in the running brooks, and good in everything." which leads her to dwell with a poet's lingering on the grace of wood and mountain, her more dominating tendency is to analysis of human beings. Her characters are like stone cameus, sharply excised from hard and precious material.

The book is a love-story, but the interest of the reader is equally held by the subordinate episodes and the environment. Miss Wilkinson's artistic instinct is as yet in excess of her technique. Not infrequently

she repeats the same word in a clause or sentence, and irritatingly coins a word when the language has an excellent one in use. In one instance

she maken a positive mistake, saying "alternatively," when the sense evidently demands "alternatively." There are no such words to sense the Standard Dictionary as "hierograph" (p. 16), "fluty" (p. 64), "ecertage" (p. 17), or "sitiess" (p. 396). Again, it is not prateful to the ear to have 'scarross respond "harmonically" (p. 27), to have fackloss modely "stantly" (p. 57). Weet's \* Intrinsic & 1.1 Thirt specific toom smodely "stantly" (p. 57). Weet's \* Intrinsic & 1.1 Thirt specific Miss Wilkinson does not consider the New York \* Mersial building as \*Mersia \* Architecture ! Yet sies speaks op p. 34, of the "Moorrish res-

paper building at Herald Square."

This is too much space to give to trafes, but the book is too fine and strong to make endurance of such valigar slips easy. Her claracters to the strong to make endurance of such valigar slips easy. Her claracters was to the strong the strong to the build. The humanity is narrow in his religious excitations, and with all his inescorable insistence on right is full of human exclanesses. He loves a woman who is another man's wife, and after she has confessed to him that her love for her husband is dead, and his recording to the tranging with passion for her, he kesses her on the recording his her dropping with passion for her, he kesses her on the

After the husband is killed by a failing tree, and the lady is free, the final chapter shows Enoch climbing to the top of an unknown mountain because he has had a dream that he found Alison at the top. He actually finds only the resy Dawn, and he "spoke with great humbleness: Who shall ascend into the hill of the Lord? He that hath clean hands and a clean beart."

In which mystic blur of pure nature, religious aspiration and doubtful aim, the book ends. Truly, in writing a novel, it is not the first step that costs. It is the last.

In conclusion, it is only justice to Miss Wilkinson to accord hearty praise to a novel which takes its place descreedly among the distinguished ones of the last year. She will achieve yet stronger work.

# ANOTHER GLITTERING ROMANCE OF HENRY OF NAVARRE.

THE RÖLE OF THE UNCONQUERD. A Romance of the Courtship of Henry of Navarre and Maria de Medici. By Test Dalton. Cloth, 5½ x 7½ in., 3x7 pp. Price, 41-50. G. W. Dillingham Company.

M. R. DALTON, it is understood, is a very young man, and this, his first book, gives evidence that he is a bright and elever one. His cleverness, indeed, confronts one before the book is opened, for its wrapper reveals that he has had the wit to secure a verdiet from there of his literary friends, all men widely known in letters—General

Lew Wallace, James Whitcomb Riley, and Booth Tarkington. All three commend the story, yet the critical eye will readily perceive that neither of these gentlemen utters a really critical opinion of its merits as a

One has only to open the book anywhere and glance down one of its pages in order to agree with Mr. Wallace that the story is "animated, carefully arranged, dramatic, and unusually interesting"; or with Mr. Riley that "it is an unusually entertaining work"; or with Mr. Booth Tarkington that it is "like sitting at a good old-fashioned drama where all's

"well that ends well."

Yet all this does not imply that
Mr. Test Dalton has achieved a great

TEST DALTON.

work of fetion. There is dash rather than fulness of life or portrayal of character. Nobody in the story is stupid or dull or of every day mould. Whether the speaker be Henry of Navarre, bis court jester, or his minister of state, the villalismos blue of Fascoy, or the Grand Duke of Tuscany, uncle of Maria de Medici, they one and all exchange there is the state of th

In the construction of his story, too, Mr. Dalton appears to disclain versimilitaties in the muvenents of his people. He throws his whole strength into incessant action. From the opening of the story on a May-day in 1920, when Henry, his jester, and his prime minister talk together on the heights of Vallambrosa, while the French army lay enamped behind them along the Apenines, and throughout all the subsequent meeting and masqueradings among friends and foes. Henry were audi seems as impossible as any one of Duma's impossible reviews and seems as impossible as any one of Duma's impossible for the property of the pr

The inhuman villainles of the Duke of Savoy, suitor for the hand of Maria de Medici, and the manner in which he is invariably foiled, become, ere the end is reached, ludicrous. The story fairly scintillates, but when all is done, and the reader seeks to retain its substance, he will be apt to feel that it has somehow evaporated.

# THE OLD WAY >-

N/C. the days of Tabal Cain, up to a few years ago, it was necessary to protitute the strongers partie of instal work by hammering. #### CURRENT POETRY. The Poet.

#### By PAUL LAURENCE DUNBAR.

He sang of life, serenely sweet With, now and then, a deeper note, From some high peak, nigh yet remote, He volced the world's absorbing beat.

He sang of love when earth was young, And Love itself was in his lays. But ab, the world, it turned to praise A jingle in a broken tongue.

-la Pebruary Cosmopolitan.

#### Transition.

By FLORENCE RARLE COATES. Aweke, my soul!

Thou shalt not creep and crew!-An earth-bound creature, pitiful and small, Whose weak ambition knows no higher goal !-Thou wistful soul!

When morning sings.

Forgetful of the night, Bathe all thy restless being in the light Till 'neath the mesh that close about thee clings

Thou feel thy wings.

Then find life's door,-To soar and soar !

Trusting the instinct true That points to Ifeaven and the serial bine A winged thing, impelled for evermore

# How to Paint a House Cheap

And Have it Guaranteed to Look Better, Wear Longer and Cost Less Than the Best White Lead Paints.

Rever Fades, Cracks, Chalks, Peels or Blisters, and is Not Affected by Gases.

Fifty Sample Colors Prepaid to Any Address Absolutely Free

The cost of painting the house and barn, outbuildings and fences is a heavy burden. Cheap painta soon fade, peel or scale off, and white lead and oil costs so much and has to be replaced so often that it is a constant expense to keep the bright, clean ap-pearance so desirable in the conv cottage home or

The Waldorf-Astoria, New York City, one of the Most Magnificent Hotels in the World, is Painted Entirely with the World-Famous Carrera Paint.

the elegant mansion. To meet the needs of the small purse and at the same time give the rich, insting, protecting effect of a first-class paint caused the manufacture of Carrara Paint, and it is the best paint for house, barn or fence; for interior or ex-terior work it has no equal. It is smoother, covers more surface, brightens and preserves colors, is used on wood, iron, tin, brick, stone or tile, and never cracks, peels, blisters or chalks : it does not fade ; it putlasts the best white lead or any mixed paint, and it covers so much more surface to the gallon that it is aper in the first costs than most cheap paints. The following are a few of the large users of Carrara Paint

#### The Paths of Death

B. WARRIST DRESCOUT SPOTTORD There are two folds upon the bill, And one is lone and very still-Only the rustle of a leaf Gives bappy sound of life and stir, And warbles bubbling bright and brief Where the hird skims with fearless whire. Or a bee rifling on his way The honey from a wild-rose spray. Sometimes a soft and summer shower Drops gentle music hour by hour Or a long breath of wandering air Makes melancholy murmur there. And all is calm and full of peace There where the dead have sweet surcease

The wild rains fall, the wild wind raves -In every dusky alley met Sad ghosts, who best an aching breast With anguished longing and regret, Remember that they once were blest. The heart gone out of them, the soul Fled on ward to some nuknown goal. For them no glad and further year. Ashes the rose, and beauty sere, Without a wish except to fill Their eyes with dust-the dead who will With ruined hope and joyless mirth Go to and fro upon the earth !

-In January Scribner's Magazine

#### My Task

By MAUDE LOUISE RAY.

To love some one more dearly ev'ry day. To help a wand'ring child to find his way. To ponder o'er a noble thought, and pray, And smile when evening falis

To follow truth as blind men long for light. To do my best from down of day till night. To keep my heart fit for His boly sight, And answer when He calls.

-In January Harper's Magazine.

#### Individuation

By WILLIAM H. HAYNE.

Each man, a world-to other worlds half known-Turns on a tiny axis of his own His full life or bit is a pathway dim

To brother planets that revolve with him

### -In January McClure's Magdaine,

#### PERSONALS.

Mrs. Leslie Carter and the White Horse,-During a rehearsal of "Du Barry " in Baltimore, a few weeks are a white horse was brought on to be used to draw the unfortunate heroine's tum-

brol through the streets of Paris to the guillutine. Mrs. Carter objected because of its color. Thu rest of the story is told to McCall's Magazine as follows:

"The horse's disposition was perfect : nothing could disturb his equanimity, and no matter how loudly the mob of supers foared and surged around him be never moved an eyelash. Bight

A Perfect Shoe Polish in Paste Form. applied, a little rubbing with a dry cloth gives a bestiful pollsh. Keeps the leather soft and pluble. I can't spill it. Omnic Demical Co., Dept. L. Brockson. M. equine actors had been tried before him and found wanting-they had kicked and shied and 'cut up' generally when they heard the shouts of the Revolutionists, he alone was letter perfect.

"Mrs. Carter's intensely red bair, it will be remembered, is her crowning glory. Now she had no sooner climbed into the tumbrel and noticed the horse than she suddenly stopped short in her speech and brought the rehearsal to an abrunt

"' Mr. Belasco,' she called out across the footlights, 'won't you please get another horse? This

one won't do at all! "' But, Mrs. C-, he's a bully old nag, cried Belascu. 'He's as quiet as the grave.'

"'i can't help it,' replied the actress. 'This scene is the most crucial point of the play. 1 can't afford to take any chances. I have no obections to the horse personally, but he's white, and in a tragic scene like this I can't afford to give any fool out in the frent a chance to make a joke out of the red-headed girl and the white horse If my head was already off it might be all right but you must remember that in this part of the scene it is still on "

#### MORE OR LESS PUNCENT.

His Way .- A musician, brought to despair by the poor playing of a lady in a room above his own, meets her one day in the hall with her threeyear-old child, and says, in a most friendly manner : "Your little one plays quite well for her age I hear her practise every day."-Tit-Bits.

Not the Cause.-The provincial barber remarked the sparsity of his customer's hair. "Have yon ever tried our special hair wash?" he said, expectantly.

"Oh, no, it wasn't that that did it," was the customer's crushing reply. - Td. Bitt.

Thrift !- MAREL (who has just enneluded a bargain for a fowly: "Then I'll tell mother you ll kill it and send it up to-night." MES. MACFARLANE: "Na. na. I'll no kill it till the morn. I'm tninkin' it's goin' to lay an egg this evenin'!"—Landon Punch.

His Observation .- "lie say I should call between vun and two,

"Well, if you'll wait a few minutes-he's just gone to lunch-"Ah! In zat case I suppose he vill be back at vance. In America time ees of more importance zan digestion !"- Puck.

Rlind !- GENTLEMAN (to yokel): "Well, John did you give the marquis my note?" YOKEL: "Yes, sir; but it's no use writing letters to him. He can't see to read them. He's blind-blind as a bat!"

GENILEMAN: "Blind?" Yoket : "Yes, sir, blind. Twice he asked me where my hat was, and I had it on my head all the time " Tit. Rute

A Graphic Account. LITTLE MONTAGUE, "I was awake when Santo Claus came, liad!" FATHER: "Were you? And what was he like.

LATTER MONTAGUE: "Oh, I couldn't see him-it was dark, you know. But when he bumped himself on the washstand he said-FATHER (hastily): "There, that'll do, Monty, Run away and play!"- London Punch

### INCOME-INCREASING INVESTMENT 7 PER CENT, TO 20 PER CENT.

An Unusual Opportunity of Absolute Merit. Investigation Will Cost You Only a Postage Stamp

### DIVIDENDS PAYABLE SEMI-ANNUALLY

A very limited amount of the PREFERRED PARTICIPATING CUMULATIVE TREA-SURY Capital Stock of a close corporation is offered at par FOR ADDITIONAL CAPITAL with which to handle RAPIDLY INCREASING BUSINESS

### INVESTMENT: NOT SPECIFIATION

The business is not an experiment, but is old and well established. It is organized on sound, logical, business principles, and is managed by business men of high standing and great experience.

great experience.

BASIS OF VALUE
The Capital Stock is based on—VALUABLE REAL ESTATE; LARGE MODERN
machinery equipment; a RARE and VALUABLE PRODUCT; an UNLIMITED SURROUNDING MARKET; the MOST FAVORABLE LOCATION in THE WORLD; CHEAP-ROUNDING MARKET: the MUST FAVORABLE LOCATION IN THE WOOLD, GITCHEST and MOST CONVENIENT transportation; a great present and an increasingly greater future, ALL WITHIN 13 MILES OF NEW YORK CITY HALL.

The permanent increasing success of this business will be but a logical and natural result of the unusually favorable natural conditions in which it is founded

In these times of constantly diminishing interest rates PERSONS OF MODERATE
MEANS MUST LOOK FOR ADEQUATE INCOME TO SUCCESSFUL BUSINESS ENTERPRISES

In the most natural course of events this stock now offered at par should not only produce constantly increasing large dividend returns, but should soon become worth several times its par value.

Mearly 1/2 of the Price Saved Digest Readers on a Choice Library Set

### Regular \$5 Special to \$3.50 Taine's History of

**English Literature** 

EVERY page glows with animated and vivid narrative as absorbing as romance. Here is no mere summary of facts, for the masterly author goes behind the facts and gives the reader a searching and richly in-structive explanation of the reasons and conditions for every important event. Taine gives his readers the psychology of the Eng-lish people as interpreted in their life and literature since the earliest days.

"His style is vivid, picturesque and ani-mated. He combines brilliancy with costatic spirit."—Larousse's Encyclopedia.

The regular price of this edition is \$5.00. We offer it to I sensor readers for only \$3.50, and payable \$1.00 down and \$1.00 a month till paid for.

A. WESSELS COMPANY, Publishers, 7 & S W, 18th St., New York City.

worthy to be one of the uppopents of the American player Morphy during the latter's memorable visit to London in 1858. He played a series of four games with that youthful genius, winning one; but in a subsequent series of five games, Morphy conceding the odds of Pawn and move, Mr. Owen drew two but did not win a game. In the famous British Chess-Association Tournament in Burmingham, in 1852, he won the first twn rounds, but lost in the final round to Lowenthai. In 1860 he made even games with the renowned Austrian expert, Kulish, each winning four games. Owen was a type of the sturdy Englishman of the old school, and will always be remembered as an er-

#### dent devotee of the game and a chivalrous opponent - The Sun, New York. The Monte Carlo Tourney

The scoring of Draws in the Monte Carlo Tourney is es follows: For the first Draw each player is scored % of a point. The game is then replayed for the other 1/2 point, and if the accord game is drawn, each player wins an additional V point, making the score for that game % point each; but if one player wins when the drawn game is replayed, the win is acored the remaining % point, making his total score for that game % and his opponent %.

Philadelphia (a) A variation introduced by Mr. A. K. Robinson, of Philadelphia The play is quite satisfactory, and has been repeatedly adopted by Chammon Lasker.

(b) Herdly good. Castles at once, or P-Q Kt 3 and B-Kt 2 would have been in order.

erly selects this move to prevent his opponent from getting his Queen to the King's side (d) Kt-Q 2, followed eventually by Kt x B, might have saved the game. The move selected

gives White a speedy win. (e) B-B a would have been answered with Kt-Kt 5, while Kt-B 3 would not have been satisfacory on occount of P-Q 5 and Kt-Kt 5, or B-K 4 and Kt-Kt s. The play selected is answered brilliantiv with B x Kt P, to be followed by O x P ch and Kt-Kt 3, Black being placed into a mating position.

All sorts of people use it, all sorts of stores sell the famous English complexion soap, Established 1789.

Sold all over the world. Beaders of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

### FRIED ONIONS

### Indirectly Caused the Death of the World's Greatest General.

It has matter of history that Nameleon was a Fourmand, an inordinate lover of the good things of the table, and history further records that his favorite dish was fried onlons; his death from career of stomach it is, claimed also, was probably caused from is excessive induigence of this fondaras for the odorous vegetable

The onion is undoubtedly a wholesome article of food, in fact has many medicinal qualities of value, but it would be difficult to find a more indigestible article than fried onions, and to many people they are simply points, but the onion does not stand alone in this respect. Any article of food that is not thuroughly digested becomes a source of disease and disconfort whether it be fried onlone or beefstenk

The reason why any wholesome food is not promptly digested is because the stomach lacks some unportant element of digestion, some stomachs lack peptone, others are deficient in gastric juice, still others lack hydrochioric acid.

The nne thing necessary to do in any case of poor direction is to supply those elements of direction which the stomach lacks, and nothing does this so thoroughly and safely as Stuart's Dyspepsia Tablets. Dr. Richardson in writing a lhesis on treatment of dyspepsia and indigestion, closes his remarks by saying, "for those suffering from acid dyspepsia, shown by sour, watery risings, or for flatulent dyspepsia shown by gas no stomach, causing heart trouble and difficult breathing, as well as for all other forms of stomach trouble, the safest treatment is to take one or two of Stuart's Dyspepsia Tablets after each meal. I advise them because they contain no harm-

ful drugs, but are composed of valuable digestives. which act promptly upon the food eaten. I pever which ack primply spot he root essent, here a case of indigestion or even chronic dyapepais which Stuart's Tableta would not reach."

Cheap cathartic medicines claiming to cure dyapepais and indigestion can have no effect whatever in actively digesting the food, and to call any cathartic medicine a cure for indigestion is a mis-

nomer.

Every druggist in the United States and Canada sells Stuart's hypopsaia Tableta, and they are not only the safest and most successful, but the most scientific of any treatment for Indigestion and stomach troubles.

The work sells regularly at \$30. To Literary Digest readers who accept this offer within thirty days, the set will be sent prepaid on payment of 50 cents and the balance will be payable in sixteen monthly payments of \$1 each. In addition we will send (to the first 500 accepting this offer), entirely free of charge, the Portfolio of 25 beautiful Photogravures of our Presidents. Books can be returned within ten days and money refunded if not found satisfactory.

New 1902 Imperial Edition

ve Superb Royal Octavo Volumes Bound in Elegant Half C.

To this vivid, animated story of our country's life from the earliest times down to the present, 350 pages have been added, treating fully of the McKinley Administration to the Death of President McKinley, and the opening of President Roosevelt's Administration down to January 1, 1902.

### FREE TO FIRST 500 DIGEST SUBSCRIBERS

The first 500 subscribers who send their orders for this Matchless Set of Books, together with the cash payment of 50 cents, will receive absolutely free a l'ortfolio containing 25 Photogravures of the most authentic portraits of all the Presidents. These Photogravures are 11 x 14 inches, and cannot be purchased in the stores at less than 50 cents each, or \$12.50 for the set. This offer is only made to introduce the New 1902 Edition, and only the first 500 subscribers gel lt.

erten and the Committee of Courress at Valley Forms

### PROFUSELY ILLUSTRATED SUMPTUOUSLY MADE

It is illustrated with too Photogravures and Half-tone Etchings of famous historical paintings by Trumbull, Chappel and other great artists, making the most valuable collection of historical illustrations ever produced. It is superbly bound in half calf, gilt tops, etc. The type is large and clear; the paper of the highest quality, vellum-finished. The work is provided with chronological chart, instructive historical maps, and a thorough index.

HIS remarkable work is the most fascinating and accurate history of the United States ever published. The narrative is so brilliant and dramatic that it leaves an ineffaceable impression on the mind of the reader. All the stirring scenes of our national history are presented with the vividness and charm of a Shakespearian play. With wonderful scope all the vital facts of many exhaustive histories are given, and into these facts animation and keen interest are instilled to a degree unknown in other works. Its glowing chapters tell the story of our country from the days of the early Norsemen down to and including the death of President McKinley, The work has received the highest indorsement from leading educators and scholars throughout the country, and over 500,000 sets have been sold up to the present time. No other historical work has ever had such a great sale in the world, and this shows conclusively the wonderful merit of the work.

Every American should know this Country's history. Every family should have in its Library a Standard History of the United States. Every parent should see to it that his children know thoroughly the history of their own country.

"All Americans who are proud of their country and its sublime record, should purchase Dr. John Clark Ridpath's History of the United States." - The Critic-

### Enthusiastic Commendation from the Highest Critics From John L. Stoddard, Historian and

From the Late President Wm. McKinley. | From Emil G. Hirsh, Rabbi of Sinai | l am familiar with the writings of Dr. Ridpath and commend his History of the United States to the scholar as well as to the plain people generally.

From Gen. Lew Wallace, Indianapolis, Ind. I have not words to sufficiently recom

mend Professor Ridpath's "History," and am delighted to hear that a reduction of the in contemplation, as the effect will be to bring the great work within the means of every reader.

thoroughly, symmetrically, masterfully rounded and completed.

I rejoice that such a work has been produced to meet a long-felt need, and to bring

the history of our race to the easy grasp and comprehension of our busy millions. From U. S. Senator John B. Foraker.

Ridpath's "History" is really a great pro-

duction. The author has done his work in the most thorough and interesting manner. No library is complete without it.

MAIL THIS COUPON TO-DAY.

Lecturer, Boston.

### ADD THIS ENDURING WORK TO YOUR LIBRARY

The sterling merits of Dr. Ridpath's historical writings are now recoged wherever the English language is spoken. It is the Popular History of the United States that gave him his reputation. The book has gained immeasurably in the recent revision. In its new dress and enlargement of matter the work is destined to add another quarter of a million of readers to those who in the last decade have perused its fascinating pages. Only 50 cents with the coupon secures the set for examination,

HENRY G. ALLEN & CO., Publishers, 150 Fifth Ave., New York,

HENRY G. ALLEN & CO. 150 Fifth Ave., New York: I accept your Special Offer to Discay Readers of Ridgath's History of the United States, and enclose so cents as initial pay-ment. Send full particulars, and, if astisfactory, will order the set, otherwise the 50 cents is to be returned to me.

on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent two weeks prior to the date they are ta go into effect. The exact post-office address to which we

are directing paper at time of writing must always be given.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

### TOPICS OF THE DAY.

### HOME VIEWS OF TILLMAN AND MCLAURIN.

N O more severe condomnation of the South Carolina Senators appears anywhere than that to be found in the papers of their own State and of their own parry. Both me considered worthy of the censure administered to them by the Senate; but Senator Tillman is given most of the blame. Every move he has made in the affair has seemed to make his case worse. The

fight itself was considered a disgrace to the State, but Scnator Tillman's explanation of it in a newspaper interview is regarded in South Carolina as making him ridiculous. His apology to the Senate aroused still further the wrath of the South Carolina papers, and his handling of the White House dinner incident is regarded as putting him completely in the wrong. The account of the fight and the causes

SENATOR THEMAN

unms last week. After the Senate had adjudged the twis-fennators in contempt for their conduct, the President conveyed information to Senator Tillman, by another Democratic Senator, that it would be desirable for Tillman, under the eircumstances, to withdraw his acceptance of the invitation. The Senator declined to do so, and the President thereupon withdrew the invitation. Senator Tillman's nephew, licutenant-governor of South Carolina, then withdrew an invitation previously sent the President to officiate at the presentation of a sword to a cavalry major in South Carolina. The major, in his turn, resents the action of the licutenant-governor, and declines now to accept the sword.

that led up to it was

Senator Tillman, it will be recalled, accused Senator NcLauiri of trading his ved for the Philippine treaty in return for the federal patronage in South Carolina. Senator McLaurin declared that the charge was "as wifni, malicious, and deliberate lio," and then Senator Tillman attacked his colleague. "South Carolina." Sources

the Columbia Mate,

match upon the floor
of the most dignified

legislative body on earth." The same

paner remarks:

"There are two things about this Senate 'scrap' that we do not understand: The first is why Senator Mc-Laurin should turn 'pale to the lips' and 'tremble with emo-

BENATOR MCLAURIN.

tion and denounce on the floor of an august Senate as 'a wilful and deliberate lie' a charge which has been made against him so often on the free forum of his own State and among a somewhat pugnicious populace without his receiving it in any such manner. The second is why Senator Tillman should develop a 'tiger-like ferocity' in the Senate at being called a liar when in time past he has repeatedly secepted that epithet on the South Carolina stump with the gentle meckness of a lamb or the lofty, serene repose of a statesman. Surely Senator McLaurin knows that his colleague has repeatedly charged him in South Carolina with selling out to the Republican party for the federal patronage-yet he now treats that charge as if it were a new and sudden affront to be resented instantly, even to the destruction of the dignity of the Senate, And surely Senator Tillman remembers-to tempt his memory no farther-that when he was from twelve to fourteen years younger and when the blood ran more hotly in his veins he failed to jump with the ferocity of a tiger on the two newspaper men who to his face called him a liar-one at Blackville in 1888 and the other at Marion in 1800. What is there in the atmosphere of the United States Senate that inspires our Senators to a sensitiveness and an aggressiveness not natural to them at home?"

In his defense in a newspaper interview, referred to abovo, Senator Tillman saki he nettel under "the old Anglo-Saxon rule of considering the he direct as the first blow," and he declared further that "no man could hold up his head in decent society should he, being mear enough to answer the lie with a blow, not give it." The State recalls to the Senator's mind the occasions when he has not followed this rule, and hints that if the White House dinner to Prince Henry was "decent society," then the Senator burred himself out by his own attempt at justification, The Charleston Pest says of the dunner incident.

"It is very clear that Tillman has lost his head in this whole affair. His action in the matter of the invitation was a serious

blunder in whatever light it may be regarded, aside from the consideration of decency, which probably will not concern him much. Had he allowed the President to remove his name from the invitation link without protest, the whole incident might have excepted public notice, or, if he had wished to, he might have exploited it and made some rude equitad of it among his uncount followers. He could have said that the President had been discources to him and that he was glod this had relieved him of the necessity which his position placed upon him of disting at the same table which had served Boster Washington and with the same table which had served Boster Washington and with the world was the same table which had served Boster Washington and with the world with the same table where the distribution of the control of the cont

like most of the loudest ranters against royalty and its ways, be 'dearly loves a lord,' and would have been in a heaven of happiness to dine with the Hohensollern prince. And in like engrences he pushed his desire so hard that he will not be able to tell his constituents that he was glad to be relieved of the disagree able duty of dining at the White House, and some of them may ask him how it is he was so anxious to eat with the President and the Prince'.

And his apology is considered still worse. The Charleston News and Courier handles it as follows:

"Senator Tillman's 'apology' to the Senate on Saturday for his disgraceful conduct was even worse than his offense against all decency and good order. His plea that 'I have never had any legislative experience when I came here, and my previous

service as governor of South Carolina for four years had unfitted me in a measure to enter this angust assembly with that dignity and regard, proper regard I will say, for its traditions and habits and rules that is desirable, "was a reflection upon the traditions and habits and rules of the people of this State. There is nothing in the office of governor of South Carolina to encourage the manuers of the prize ring, and we hope the better sentiment of the country will acquit the people of his Sitate of any sympathy with the brutal exhibition made by the senior Senator from South Carolina and his colleague on Saturday. The State can not escape responsibility, of course, for the miserable affair, but it can at least express sincere regret that it should have been so disgraced by its representatives and hope that the rest of the world will pity if it can not forgive."

### The same paper says of Schator McLaurin:

"The conduct of Senator McLaurin was utterly without excuse. His lenguage in the Senate was an insult to that body and disgraceful to himself. He must have known that it would make a 'sensation' at least, if it did not result in a resort to violence; and common respect for himself, for his State, and for the Senate should have influenced him not to give occasion of offense. It would be better for the State and for public decency if the country could be spared the humiliation of being represented by men who can not control themselves.

"No punishment that the Senate could inflict upon the South Carolina Senators would be too severe for their outrageous con-

The other papers of the South handle the two Senators in much the same fashion. The Radieph News and Observer thinks that "both should resign," and Mr. Watterson, editor of the Louisville Courier-Jearnal, asys in an interview: "If I were in the Senate I would vote to throw both of them out." The Nashville News calls the behavior of the Senators "deplorable," and the New Orleans Picayana calls it "raffianly." The New Orleans States says the affairs "has shocked and shamed the whole country." The Houston Past-calls the two men 'brawlers and bullies," and the St. Louis Past-Dispatch calls them "hoodlums." "There can be invented no explanation," believes the New Orleans Times Democrat, "that will even in the least degree extennate the unbecoming behavior of either of the offenders."

In spite of the charge that Senator McLaurin has turned traitor to his party, the Democratic papers of the South, in discussing this matter, do not appear to give much weight or attention to that phase of it. There is not only no disposition to blame McLaurin more than Tillman, but many papers show a disposition to confine their criticism to the latter. Says'the Memphis Commercial Appeal; "The responsibility for the recent fight in the Senate rests entirely with Senator Tillman. His claim that the lie was the first blow is entirely wrong. When he accused Senator McLaurin, in the latter's absence, of having been corruptly influenced in his vote on the Spanish-American treaty he delivered the first blow," And the Atlauta fournal says: "It must be admitted that the senior Senator from that State has by his unceasing bitter attacks on everything and everybody, but more especially upon his colleague McLaurin, invited some such treatment as was accorded him Saturday."

"He is a clown and a bully," thinks the Richmond Times, and the Raleigh Times regards him as "an absolute disgrace to the whole nation," and "a daily repreach to South Carolina with her glorious past." The Macon Telegraph says that his tirades "excite disgust," and he "ought to be expelled."

The Baltimore Sun says, however:

"It is not the slugging Senator who is a menace to our civilization. It is the Senator who obtains admission to that body by the the prolligate use of money; who delaucites the conscience of overers by bring political preferent. Men have held seats in the Senate against whom charges of bribery and corruption were shield. Men have been Senators who were charged with offensess who were the senator of the sen degree, and have been high in the counsels of their party. The critics of 'plantation manners' have fawend upon them and such do them. It is these products of nodern eiviliaation who and to undermine confidence in our institutions than the mea and to undermine confidence in our institutions than the mea with 'plantation manners' have done in accuracy and a owners."

#### GERMANY DRIFTING OUR WAY.

WOLF VON SCHIERBRAND, a German correspondent of American newspapers, who was expelled from Prinsia by the police not long ago for his writings, now credits the Emperor with the purpose of deserting the Triple Alliance and cultivating closer relations with Great Britain and the United States. "The

Kaiser's advances during the last few years both to this country and to England, of which the mission of his brother, Prince Henry, is but the latest and most striking illustra tion, "declares Von Schlerbrand in The North American Review. "clearly point out the direction which he means to give to Germany's foreign policy in the near future." Austria entered the

PORTRAIT OF THE GENTLEMAN WHO SAVED AMERICA FROM THE EUROPEAN COALITION IN 1898.

— The Militarites Journal.

Triple Alliance, it appears, for fear of Russia; Italy, for fear of France; but now Austria is more friendly to Russia than to Germany, and the good feeling between France and Italy is the talk of Europe. So "the Dreibund is crumbling before our very eyes." Mr, von Schierhrand goes on to say:

"Now, as to England, the anomaly is presented that, while the German Emperor and his Government are anxious to tighten the political affiliations with that country, and while, partienlarly, the Kaiser's strong sympathies and desires go out in that direction, the overwhelming public opinion of Germany is averse to this. . . . But, while all this is true, it does not mean that a foreign policy friendly to England is impossible in Germany. even at this moment, for the Kaiser practically shapes her foreign policy. The imperial chancellors since Bismarck's retirement have, virtually, merely carried out their imperial master's behests, and have vouchsafed only that measure of explanation to the Reichstag and Bundesrath, for the steps taken or decided upon in Germany's relations with other countries, which they saw fit and considered safe. It is idle to discuss here the question whether this is in strict consonance with the constitution of the empire. Certain it is, that such has been the unvarying practise since the Kaiser, twelve years ago, took hold of the helm himself and became, to use Bismarck's expression, his own chancelior. And that the Kaiser is strongly in favor of an Anglophile foreign policy there is not the shadow of a doubt.

"As to the United States, things in a neasure are similar, When the war with Spain broke out, in the spring of 1849, the German people violently, and almost altogether for sentimental reasons, sided with Spain. The German Government, however, took a consistently friendly attitude toward the United States—a fact which recent publications have brought out clearly, . The Kaiser is, after all, Bismarck's pupil, and as such a considerate concrete facts as of paramount importance, He quickly came to see that the United States was bound to be victorious, that Spain represented a lost cause, and that the

United States would emerge from the war much stronger and more ambitious than ever, and become a new and leading factor in the process of reshaping the world. He saw clearly that Germany's interests hade her remain the best of friends with the United States; and, once he had recognized this, he frankly and without reserve accepted the new situation, and shaped his policy accordingly. The relentless force of logic told him that the closer Germany's relations became with the great American republic the better

PRINCE HENRY ENJOYS THE PREEDOM OF THE CITY. - Harper's Weekly.

chance would there be for a friendly understanding with it at all those points where its new political or commercial interests might clash with these of Germany. His fore-sight has since been proven true in the settlement of the Samoa difficulty, in the acquisition of the Carolines, and

"In his political calculations he took into account the policy of expansion to which the dominant

party in this country stands committed, and he has since given adherence to the American definition of the Monroe Doctrine. Is be sincere in this? Has Germany absolutely relinquished those old, but never mere than half formed, designs upon West Indian and South American territory? Does Germany consider herself bound, under all circumstances, te abide by that interpretation of the Monroe Doctrine which rests, not so much upon the vigorous yet withal conservative enunciation quite recently made by President Roosevelt, as upon that somewhat hazy yet tangible and more far-reaching idea of it held by the larger half of the American people? Time alone will show. At any rate, neither the Kaiser nor the German Government, nor the even more important public opinion of Germany, any longer defines the Monroe Doctrine as Bismarck did in my hearing on May 26, 1898 (two months before his death), as 'a species of arrogance peculiarly American

and quite inexcusable.' True, the Pan-Germans and the colonial enthusiasts in Germany continue to rail against this 'species of arroyance ': and in a late issue of the leading German colonial organ, the Koloniale Zeitschrift, Dr. Rudolf Breitscheid declaims against it and against the alleged, unboly designs of the United States upon South and Central America, and calls upon Count von Bülow to quicken the pace of German colonization in South Brazil and Argentina. But he and his kind de not influence the German foreign policy. There is no manner of doubt that Germany-Kaiser, Government, and people-is at present honestly desirous of close and friendly relations with the United

### ENTERTAINING ROYALTY.

DRINCE HENRY'S career around the country has failed to bring out much in the newspapers except photographs and descriptive accounts. Very little of a controversial nature has appeared. The Irish World, which objects strengously to sending any representative to the coronation of a British king. expresses a hearty welcome to the German prince; and the New York Journal, which publishes a German edition, takes a similar attitude on both subjects. The gala concert at the Metropolitan Opera Heuse in New York City, it will be remembered, produced a lack of harmony among the box-holders, and its course was marked by discords until its close. The German artists were placed first on the program, but the Prince did not arrive until they had finished. He left before the concert was concluded, and one of the soleists in consequence refused to go on, thus making a break in the program; and when the orchestra reached the climax of "The Star-Spangled Banner," the house was almost empty. Te some minds, however, the concert was more important as a society, than as a musical, event; but even from this aspect, the metropolitan press present the most astonishing differences of opinion,

The Tribune, for instance, says that Mrs. Cornelius Vanderbilt, Ir., "wore a dress of white satin," The Times says she "was in light pink," and according to The Herald she were gray. Mrs. Mackay, we are told by The Times, was "without a single jewel," while The Journal found that her gown was "embroidered with diamends," Mrs. Orme Wilson was "in primrose," or wearing "a very delicate shade of blue satin," according to The Times and The Herald, respectively. In box to was either Mrs. Barby, Mrs. Barbey, or Mrs. Barney, and in box 20 was

CERVERA: "Who in blazes did lick me? Some one 414 - The Deutser Becatily as

THE ROUGH RIDER'S BEST SHOT

-The Detroit Journal

Mrs. Whitelaw Reid, who was in "rose color" when seen by The Times reporter, and in "Nile green" when seen by The Herald representative. Mrs. Rives's gown was mauve, maize, or lilac, and other gowns were the color of currants or roses, or simply red, according to the state of the reporter's vocabulary at the time. Mr. Hitchcock, who had objected at first to giving up his box to the Prince, was in the Adrian Iselin box. Mrs. Hitchcock wore white satin (Tribune and Journal) or canary-colored satin trimmed with black velvet (Herald), The Herald's representative seems to describe the whole situation when he says that the display was "bewildering almost beyond description." The collection of the jewelry statistics was also no light task. Confining our researches to The Herald's list, which makes no pretense at completeness, it appears that there were thirteen diamond necklaces present, ten diamond tiaras, six diamond collars, four crowns, three ropes of diamonds, one diamond stomacher, one mass of diamonds covering the front of a corsage, two brooches, one chain, one row of diamond stars, and twenty-two other diamond ornaments, besides diamond pendants galore. The diamonds worn by the ladies not mentioned in the list must be left to the imagination, and jewels of other kinds cut

The other entertainments, dinners, speeches, sight-seeing trips, etc., have been no less successful. A correspondent of the Very York Evening Post, however, expresses the opinion that Prince Henry, in all this whird of hospitality, will not see the real life of the American people, especially as experienced in the metropolis. He says:

"No vision of the beauty of Hoboken as seen from a ramshackle cab will burst upon Prince Henry's eyes at the moderate cost of five dollars to his hotel. Prince Henry will not be permitted to risk his life with the rest of us surging mortals at the Brooklyn Bridge, nor will be be jabbed in the ribs by a worn-out nervous street-car conductor, and told to 'step lively,' as he frantically makes his way amid a clinging, surging throng of women, children, Italian workmen, and colored washerwomen, hanging onto the straps, and swaving to and fro as the car stops to permit six more to squeeze onto the platform. Not for the Prince will be the true delight of a luncheon at a counter on American pie, nor will be be permitted to find his way along the street amid the expectorations of the common crowd. The true joy of standing all the way from Rector Street to Harlem on the elevated road is only thoroughly tasted by one who does so day after day, as the Prince can hardly be expected to do. What is even the likelihood of his becoming well acquainted with the hidconsly desolate waste of brick, unrelieved by any pretense of beauty or even common cleanliness, which men call Brooklyn? For him there will be none of the delights of a bargain sale at a great department store, with thousands of high-voiced, pushing women in the wildest adornment of extravagance without taste walking all over him as they rush the weary shop-girls for the things they do not buy.

"If the Prince is really to see America he ought to be induced to take a trip on a New England railroad without a parlor-car, He should get au idea of the comfort of American traveling as he creeps along from five o'clock in the morning until half-past two in the afternoon to cover one hundred and fifty-three miles without anything to eat. In such a car he would really see American life (and smell it). Books and papers would be piled up on his knees. Babies would cry, children spill water all down the aisle, as they helped themselves to the water and supplied their companions. The fragrance of oil, oranges, and peanuts would minister to his sense of smell, while the train 'hand' sweetly bawled the stations in his ear, and the conductor woke him whenever he napped to punch his ticket. These things, again alas! Prince Henry will not see, but they are a large part of American life. He will only gaze upon environment prepared for him. The glitter of our gilded 'four bundred' will dazzle his eyes. The barbaric splendor of the feudalism of wealth will be unfolded before him. But he will not really see America. Indeed, there are Americans who have really never seen their own land, and some of these are the very ones who will try to persuade Prince Henry that he is really examining our life and our land while he is among us."

### THE PROPOSED CONCESSION TO CUBA.

Tille daily papers that have been advocating tarif favors for Cuba show anything but pleasure at the ways and mean committee's plan for a twenty-per-cent, cut in duties. The New York Non says the cut is "manifestly insufficient," and the New York Timer calls it "mean and niggardly." The proposed inceasure provides that the President and Senate conclude a reciprocity treaty with the new Cuban Government upon a basis of a twenty-

per-cent, tariff reduction on all products passing between the two countries. Cuba. meanwhile toadont the immigration laws of this Government. "The inmigration clause," explains the Pittsburg Dispatch, "is designed to prevent the Cuban planters from using coolie labor, and thus, through cheapened production, underselling the American competitors." Some of the press think that if the House indorses this

H. T. OXNARD, Chief Advocate of the Beet Sugar Interests, and Opponent of Reciprocity with Cuba,

plan, the Senate will increase the tariff concession and send the measure back for revision, as in the ease of the Philippine tariff bill, in which it reduced the rates from the full Dingley schedule to seventy-five per cent, of it.

"It can not be believed," says the New York Tribune, "that such a program is the best the United States Congress can do for the honor of this nation and for the material welfare of this country and of Cuba." "There is no reasonable excuse for giving so grudgingly," declares the Chicago Record-Herald, and the Chicago Evening Post thinks that the reduction "is little more than half what this country should concede "-" seventy-five per cent. would be nearest the mark," thinks the Boston Herald. "Such a 'concession' is entirely characteristic of a body of men whose first impulse was to do nothing for Cuba," is the opinion of the Philadelphia Times, and the Pittsburg Disputch declares that the proposition "is either crass stupidity or worse." The Boston Transcript calls it "a plece of emphasized meanness," and adds: "To deny everything would be no more brutal, and it would be entitled to quite as much respect because making no hypocritical attempt to conceal the brutality. Such a measure as is proposed would merely accentuate the distress of the islands. It would only tantalize them by bringing the hoped-for deliverance a little nearer, but not near enough for them to reach." Some of the beet-sugar advocates in Congress think that a twenty-percent, reduction is too much, but the Denver Republican says; "No one need fear on account of the proposed reduction to engage in the manufacture of beet sugar in this State. Factories may with safety be erected in all the different places where their erection has been under consideration, and our people may look forward with confidence to a great development of this industry."

On the other side the San Francisco Chemicle says: "This mush about 'starving Cubans' is likely to get us into a pretty mess in the end if followed up. It will necessarily lead to concessions to other countries, the driving of our sugar-growing farmers out of business, and the reduction of our laboring men to a ration of black bread." The proposition of the committee

"is a liberal, one and it represents the maximum that ought to be accorded," is what the Philadelphia *Inquirer* believes; and the New York *Press* says:

"It is not merely on the relief of the present distress of Cuban industries that Congress has to vote. It is as to whether the future of the American sugar market is to be in American or Cuban hands, whether an annual sum total of \$100,000,000 is to

IT MAKES A DIFFERENCE WHEN ONE IS ON THE SEAT.

PORTO RICO: "Hadn't you better whip behind, uncle?"

- The Minneapolis Journal.

reach American or Cuban pockets. It is as to whether a great and growing American industry is to be extinguished, as it as suredly will be by a permanent concession, or whether a Cuban industry is to be transferred to other fields by a grant of temporary assistance."

#### LUKBAN A CAPTIVE.

GENERAL FREDERICK SMITH'S reconcentrade system in Samar (described in these columns February 8) seems to have scored one in the columns February 8) seems to have scored one int in the capture of General Lukban, who after Againalch's capture, was considered the most dangerous Filipino in the field. As the Pittsburg Chroniche Telegraph says, "with Lukban a capture it may be safely assumed that the backbone of the rebellion is broken." Says the Pittsburg Times.

"The taking of Lukban presuges the collapse of the resistance to American authority in Sanar; just as a that of Aguinaldo was followed by the pacification of all but a very small portion of Lucon. Samar is only about one-tent the area of Lucon, and the taking of Lukban ought to have even a greater effect in that island than had that of Aguinaldo in the larger one. Recent word from the disturbed district in Luzon is also encouraging. The last insurgent band operating near Calamba has been taken, and only a few days ago another important capture was an experienced and the state of the

#### The New York Evening Post says:

"Should Lukhan's capture mean the termination of hostilities In Smarr, General Chaffee will be relieved of one of his greatest anxieties, and several regiments will be freed for service cise-where. As Inspector-General Brechirridge pointed out on his arrival at San Francisco yesterday, the rainy sesson makes military movements impossible at present. But the general is confident that the next dry season will see the end of the fighting.

It is earnestly to be hoped that his sanguine view of the situation is correct. There have been enough Filipinos killed to satisfy the most bloodthirsty, and with peace at hand the future of the archipelago can be discussed in many quarters with more sanity and reason than has been possible hitherty.

### WHAT THE GERMANS HAVE DONE FOR AMERICA.

THE general interest awakened in the visit of Prince Henry of Prussia and the semi-political significance detected in it by many European Journals make timely the question, What does America owe to Germany and to the Germans? The New York Times, in an editorial retrospect showing how the German has figured in America's development, says that to official Germany we owe nothing, and that it is necessary to draw a sharp-distinction between the German states and the German popular states and the German power.

In 1958, the Lutherans of the Palatinate, following the example of the Higueunts of the preceding generation, began to take refuge abroad, and in that and the following few years 30,000 of them had crossed over to New York, Pennsylvania, and South Carolina. In 1709, 3,000 or more came over and settled on both sides of the Hudson River. This was the beginning of the German emicration to America

During the Revolution, Prussia was the first Power, after France, to Precognize the independence of the United States. The war was largely fought, on the British side, bowever, by German mercenaries, the "Hessians," as they were called, who bore the brant of the fighting on the land. At the outbreak of the war the British available force, it was stated, was 15,000, and the supply of German mercenaries was 29,166. Of these, 11,553 were among the killed, wounded, and missing at the close of the war, and 17,313 were returned in "apparent good order." Many of the missing, it was believed, were deserters who afterward settled down and helped build up the new nation. The Times continues:

"But the German natives of the first and second generations from the exiles of the Palatinate showed as great an affection for their new country as the corresponding German immigrants of eighty-five years later. Probably it was only the immigrants, the Americans of the first generation, who were enrolled as Germans at all. The 'German battalion,' of four companies from Maryland and four from Pennsylvania, did good service throughout the war, while there were no fewer than four German battalions, so-called by the historian of the Germans in America, raised by the efforts of Herkimer and his associates in the 'Schoharie Valley ' or what was then Tryon County. The description is misleading, but it at least shows that the colonists of German descent were not behind those of British descent in devotion totheir adopted country. It was this force that had to take the brunt of the fierce fighting against the British, Hessians, and Indians that marked the period of the Revolution ou 'The Old New York Frontier.

"The American cause was also heavily indebted to those Ger-"The American cause was also heavily to cast in their lot with that of the struggling colonies. Along with the names of Lafayette and Kosensko and Pulaski, the names of Stenben and Do Kalb deserve to be placed."

When the Civil War broke out, a far greater proportion of American residents or citizens of German descent, we are told, were native Americans than at the beginning of the Revolution. It was only the German-born and German-speaking Americans whose services in the Givil War can ple distinguished and separated from those rendered by the great body of patriotic Americans. "Blenker's Division" was one of the first of the German bodies to be formed. Then followed the Eleventh Corps, which was afterward known as the "German Corps"; and the "Frémont Hussars" and the "Benton Hussars" were chiefly of German birth. The most distinguished individual among the Germans was Franz Sigel,

In art and education we owe a further debt to the Germans. At the beginning of the nineteenth century London was the artistic Mecca of Americans with a turn for art, as Paris was at its close. The principal art school of America in the middle decade of the century, however, was the Düsseldorf school. Among the German painters of this school was Emmanuel Leutze, noted for his scenes of the American Revolution. The Times says

"It is small praise to say that his representations of Revolutionary scenes are more plausible and satisfactory than the authentic but wooden 'documents' of Trambull. In fact, no American child has for two or three generations doubted that 'Washington Crossing the Delaware' and 'Washington at Monmouth' occurred exactly as Leutze has painted them. And it was noder the influence of this school and on its traditions that a whole generation of our painters were reared, so that the obligations of American to German pictorial art can not be omitted from any view of this kind."

In music we depend not only upon German composers, but even more upon German performers. The German love for music has been a "social beneficence" to America, and we almost say of the Americans before the coming of the Germans us Addison said of the British of his day, that they "knew not how to be till and innocent."

"Read Mrs. Trollope on the awful pleasure of the inhabitants of Cincinnati in her time and comparet with the pleasures available to Cincinnati of to-day, which are those of every American too town with a large German element. To do this to confess that every German heer-garden which is also a music-garden is a center of civilization, and that at no point is the influence of or German population more strikingly and unmixedly au influence for good,"

In education Germany has had a great and still increasing influence upon America. "The advantage of Berlin," asys some one who has been there, "is that if you are the only man in the world who wants to know something you can go there and find somebody to teach it to you." American students have enjoyed this advantage since the beginning of the last century, but of late in greatly increased numbers, and, what is more significant, American universities have been constituting or reconstituting themselves on German lines.

In citizenship the German seems to play as prominent a part as he has played in other respects. Since 1820, 5,009,280 German emigrants have come to the United States. This is almost exactly 25 per cent, of our total immigration, aitho less than the combined immigration from Great Britain and Ireland. The Times concludes:

"The German who comes to the United States a teacher in so many things comes in these things us a learner. In so far as he fails to learn that we have nothing to take in these things, but everything to give, in so far he is not yet a good American citi-

"The irritated patriot ought to remember that the irritant immigrant is so transient; that his children will redeem his defective Americanism. And the native should think of the valuable, the invaluable qualities that may go with a dvivided allegiance. He should think of the German uprightness, the German honesty, the German good-fellowship. He should consider that the easy, the German good-fellowship. He should consider that the property of the should be should

are unmixed obligations, that in our citizenship the German element has done us no harm to counterbalance the great good it has done us, the enormous national benefits it has conferred mon the United States.

A Town Without Lawsuits.—It may not be surprising in this "wireless," "chainless," and "boneless" era to learn of "lawsuitless" imagistrates, but at any rate they are, as yet, rate. William A. Taylor, a Columbus (Ohio) writer, tells in Norfal Service (New York) of such a magistrate who held sway for eighteen years in a township in Champáign County, Ohio. He says

"Six times in succession he was elected to the office for terms of three years each, and during all that time never tried according to or entered one on his docket, although the township was thickly populated by a prosperous agricultural people of mixed nationalization untact by a prosperous agricultural people of mixed nationalization and religious, and finally induced his constituents to foregol little gation and live in peace without the aid of courts and lawyers.

"When the first plaintiff appeared before him to bring an action against a neighbor for \$25 damages for trespassing live stock, the squire fixed the day and hour for him to call again with reference to the action. When he appeared, he found the defendant there, not in response to a summons, but an invitation

"In a plain, matter-of-fact way the magistrate drew from the two men all the facts connected with the controversy, and in substance that the plaintiff's enclosures, with his knowledge, were in bad repair, and that the defendant's cattle were of a trespassing disposition,

"Presenting the two lines of facts to his neighbors, he suggested that it would be an easy matter for them to adjust their differences without his interference, but if not, he would suggest a basis of adjustment.

"To this boll agreed, and the arbitrator found for and against both parties. The plaintiff's neglect of list fences was held lessen his claim ten dollars, while the evil disposition of the plaintiff's calle increased his liability in an equal amount, beducing the decreased chaim of the one from the increased liability of the other left fifteen dollars due the lealantiff.

"This was promptly paid, and the parties who had been literally quarreling for months, went home in company, with their old-time friendly relations fully restored,

"Each of the parties,' said Mr. Chance [Mr. Taylor's informant], saved anywhere from \$25 to \$100 in lawyers' fees, and the loser, whicheve he might have been, escaped the payment of possibly \$200 court costs, for had the case come to a trial half the township would have been called as witnesses.

"The country magistrate's action not only attracted the attention and secured the approval of liss neighbors, but readily padthe way to the elimination of local lawsnits for a long series of years, and made it noe of the most desirable communities in that section of the State, which it still maintains, altho the magistrate's successors do not fully follow his example.

### LETTERS AND ART.

#### WHAT BOOKS DO CHILDREN READ?

A GOOD deal has been written on the literature that children read, but the best of all authorities on this subject—the children themselves—have seldom been heard from. Prof. A. E. Bestrick, choif of the circulation department of the New York. Public Library, who has been investigating the question of juvenile fiction, recently gaintered some interesting material at first hand. Ten of the leading children's authors, representative of what is regarded as "trashy" as well as of standard fiction, were sedered, namely: Finley, Alger, Optic, Fosdick, Stratensyer, Munroe, Trowbridge, Alout, Meade, and Clarke. On the basis of these names alts of questions was drafted, as follows: (1) Which of these have you read? (2) Which ones do you like best? (4) Why? (5) Name your favorite author not on this list. (6) From which do you learn the most? (2) Which do you Which do you learn the most? (2) Which do you Which do you learn the most?

The questions were asked of ten children—five boys and five girts—in each of the thirteen branches of the New York Public Library. It was believed that these 132 children thus questioned were fairly typical of those that use public libraries. The answers received to all the questions except Nos. 4 and 5 are tabulated as follows (in the New York Times Saturday Review, February 13).

Authora.	(Have Read.)			9.	z. (Like )		3. (Like Best.)			6. (Learn Mort.)			7. (Best English.)		
	Girla.	Total.	Hoys.	Girls.	Total.	Hovs.	(sirls.	Total.	Boys	Girls.	Total.	Boys.	Girls.	Total.	
Finley	8	41 32	49	37	98 87	98 54		10	10	13	11	11	1	12	13
Optic	52 50	14	90 66 58	110	7 9	29 25	5 16	i	5	7	÷	8	3	3	4
tratemeyer	40 50	10	57 66	35 31	7 9	42 40	15	.:	17	19	5	17	11		11
rowbridge	43 21	18	79	18	40	53	1	20	21		14	14	5	27	22
Meade	7	49	57 56	1 9	37	47	::	18	18		3	3		7 2	7

The answers to question 5 show great catholicity of taste. Some of the chief favorites are: Henty, 24 votes; Richards, 14; Ellis, 13; Burnett, 10; Dickens, 8; Deland, 6; Sidney, 6. No less than 22 other authors are mentioned in this connection, in cluding Shakespeare, Scott, Hawthorne, Stevenson, Dumas, Hugo, Ireng, Tinakeray, and Verne.

It was a difficult task to tabulate the replies to question 4, in the children were asked to give the reasons why they liked their favorite author. "With a little stretching," however, as Professor Bostwick explains, the following classification in tabular form was unde.

			R	FASO2	15.						
	Human Element		Inter- esting.		Realis-		tn. structive.		Style or Expression		
	Boys,	Girls.	Boys.	Girls	Boys.	Girls.	Roys.	Girls.	Hoys.	Guzé	
Pinley	8 8	3	10	3	::	:	3	-1	ï	9	
osdick itratemeyer Munroe Fruwbridge	1	=	9	1	2 2 1	::	3	1		'	
lcott	::	9	::	6 10 6		7		,		,	
Total	15	19	37	30	- 5	7	12	4 .	1	5	
Grand total	34		67		12			16	6		

Of this table Professor Bostwick says

those reasons that seem to be based on the recognition of a personal bond between author and reader, placing the former in the relation of friend or mentor. Thus when a writer is stated to be a favorite because he is 'so sympathetic' or because he 'teaches be kind to our sisters,' or because he tella a story that appeals to the reader by its similarity to the conditions of his daily life, the vote has been recorded in this column. Writers reported to to be morally instructive have thus been placed here instead in its column four, which has been restricted to intellectual instructiveness. This 'human element' runs more or less through the lift has asswers given, but only those in which it is especially promiment have a place in the first column.

"The second column bent is stoom, any those writers specifically.

"The second column bent is the part interesting, but also those writers preferred because they are interesting, but also those writers preferred because they write on some specific subject, in which the reader is presumably interested. In case, however, this subject is one generally included in a school curriculum, the vote has been recorded in column four. In column three are placed those cases where a writer is preferred because he is 'so can attural,' or because his is hardcarters are 'giust like the ones we know.' When a writer is preferred for two or more reasons all have been recorded."

Commenting on the first table presented, in which is shown the extent to which the ten authors mentioned are read by boys and girls, Professor Bostwick notes that "not one of the ten anthors has been read by all those questioned." He continues:

"Alger and Alcott come the nearest to it. As we should expect, the boys' authors are Alger, Optic, Posidick, Strateneyer, Munroe, and Trowbridge, and the grist' authors Flialey, Alcott, Meade, and Clarke. The most popular boys' writer with the girls is Alger, and the most popular boys' writer with the boys is Alcott. The quality of the author seems to play small part determining the degree to which he is read. Optic and Munroe have each been read by 56 persons; 20 like Munroe, and only 20 Optic, but 64 like Alger, and the mean of the two 'trashy' authors

"Comparisons like this are, of course, of luttle value when the number of data is so small, but it is at any rate large enough to show that children neither shun nor approve an author on account of his 'trashliness.' The smallness of the totals under Question 1 is noteworthy. It is usually assumed that most children have read all the usual authors and are hungering for something new: but here, out of 130 children, we have 64—nearly non-half—who have not read a line of Murroe, 66 who do not indicates that there is still room for a good deal of work in familiarizing children with their best writers."

Probably the most interesting and characteristic answers received, because showing most intimately the literary taste of the children concerned, are those in which the reasons for personal preferences are given. "One of the most refreshing things," remarks Professor Bostwick, "is the popularity of Alcott." Miss Alcort is much liked for her naturalness. "Her boys and girls are more like real boys and girls," says one answer. L. T. Meade's books are especially liked "because they are a little sad." "It is not at all musual," observes the writer, "for assistants to be asked at the desk for a 'sad story,' and these appear to furnish the requisite quality of gentle melancholy for lorn maidens of ten to thirteen." Among the boys Horatio Alger is enormously popular. One boy remarks that "some people say the Alger books are trash, but I don't care-they are interesting " -a point of view not confined to this reader by any means. Henty is voted for as the most instructive writer by thirteen boys and two girls. "Had his name been on the list," oliserves Professor Bostwick, "he would undoubtedly have ranked much higher." The writer concludes:

"I must confess that the results of this investigation, partial and innodequate as it is, seem to tend toward giving children a very wide range of choice in narrative literature and letting them work out their own salvation, not excluding, of course, judicious advice and guidance."

lic anthurities

### BELGIUM'S ART CRUSADE.

NE of the most far-reaching and remarkable artistic crusers agades of recent years was imaggarated in Relgium about seven years ago by a young Brussels artist, named Engene Broewerman. This movement, which started without money or influence, has succeeded in winning the cooperation of Belgian eabinet ministers, and is now national in its scope. It finds expression in almost countless channels, is altering the aspect of the Belgian eities, and is restoring to their modern environment something of the beauty of the ancient Flemish art. The society which has accomplished such notable results within so short a space of time is known as "L'Œuvre Nationale de l'Art appliqué à la Rue," and its declared objects are:

"To create an emulation among artists, by discovering a practical way in which their works may be inspired with general interests.

"To clothe in an artistic form all that progress has made useful in the public life.

"To transform the streets into picturesque museums comprising various elements of education for the people.

sing various elements of education for the people.

"To restore to art its one-time social mission, by applying it
to the modern idea in all the departments controlled by the pub-

Writing of the early work of the society in Harper's Magazing (February), Mr. Charles Mulford Robinson says:

"L'Œuve's first net, after the early publication of its principles, was a formal announcement in 1894, that it intended to show its faith by its works, 'in at once conducting open contexts, for the most beautiful constructions on a new street of Brussels, the Rue Joseph Stevens, and for various objects of public utility. 'These latter were to include street foundains, electric lightly, 'Interest the properties of the street foundains, electric lightly, obles, flagstaffs, newspaper-kiosks, etc. So in the first year there was promised an immediate starting of that work now so widely known, and of the example, which Paris has lately followed, of prizes for the most artistic bouse-frouts on new streets. The society knew, long before its definite organization had been completed, precisely what its work should be.

"In its second year, 1895, L'Guvre arranged an exposition of artistic signs, ancient and modern—held at the Museum of Brussle; organized (t) a competition for plans, and (t) a competition for plans, and (t) a competition for signs that had been executed. These were really the first undertakings of the society by Itself, and the subject was chosen with the special purpose of indicating the practical usufulness of its teaching, and to comhat 'the widely current but false idea that art is incompatible with economy and the necessities of trade.' . . . There is no pretense that these signs are now the best to be seen in Belgium, but it is claimed that they were the best at that time, and that the improvement which has since taken place must be largely the to the impetts of competitions."

In the next year, 1896, "L'Œnvre" gave its attention to the decorative quality of apparatus for public lighting, with the result that a single candelabrum, designed for the Place de la Monanic in Brusseks, has been reproduced in a great number of other cities. Prizes were also offered for a poster for the Brussels Fair and for the poster of a beel-extract company; and competitions were instituted for designs of postage-stamps to commemorate the Brussels Exposition and for designs for the new national coinage. The writer continues:

"The fourth year of L'Œnvre's existence, 1897, was notable in Brunsels for the holding of a world's fair, and the sweiey declede to bend its energies that year to the fitting up at the expisition of a Department of Public Art, in which it might give a careful and, it hoped, an inspiring, demonstration of its work and aims, and of the ancient glory of civic act in Belgium. On account of the latter purpose the exhibit was largely historical, and Antwerp, Liege, Ghent, Bruges, Namur, and many other cities joined with the enthusiasts of the city of Brussels to make it both interesting and valuable.

"Each city sent exhibits, in original or reproduction, of its own treasures of public art in whatever sphere. These, carefully classified, were arranged in seven sections, as follows: (1) Monumental and decorative façades with their details; (2) monu-

PULES FOR ELECTRIC STREET MAILWAY,

CANDELABRUM, PLACE DE LE MONNAIE, BRUSSELS, Courtesy of Harper's Montaly Magazine.

OLD AND NEW SIGNS, DRUSSELS.

ments commemorative, etc.; (1) signs; (4) apparatus for public lighting and decorations; (5) fountains, wells, pumps, etc.; (7) monumental applications of painting and sculpture; (7) decoration for public ficts. The whole made a showing of which elgium had reason to be prond, and whence its ambition might be fed."

So great was the general interest that the society fell encouraged to call a national and, there, an international conference for the consideration of the decorative arts. The latter gathering owns attended by two hundred delegates, including representatives from England, Prance, the United States, Sweden, Norway, Holland, and Hungary. As one result of the convention the movement is beginning to take root in other countries. Says Mr. Robinson.

"Paris has founded a public society in likeness to L'Garver, cities of Italy, led to dream of their lovely past, have followed the Belgian example in an organized effort to reclaim it. The dictum that there is no essential reason why cities should be ingly, why the centres which are gathering to themselves an ever-larger proportion of civilized mankind should not be built with a beauty worthy of their high postrom, that the artistic in public work is as chean as the hideous and far more to be desired, is rineary mechallenced through many thoughtful rations.

"Art dans la rue 'has of late years become a rallyingery that reaches farther than Belgium", little cities; but the movement has found in them its strongest organization, gains confidence in the thought of their proud history, finds inspiration in the loyalty to tradition of the earnesteness of their present effort to reclaim it. There is no art eudeavor of the day that is as interesting as that of L'Guvre Nationale Belge to fuster art in municipal undertakings, to bring beauty into the familiar phases of city life, and thus to raise its common level that has lately been so low."

### ANDREW LANG ON TENNYSON.

A NDREW LANG, the English man of letters, who signs so much printed matter during the year that, to quote the words of the New York Critic, it almost seems as if he "must

write with both his hands at once," is the author of a recently published biographical and critical monograph on Alfred Tennyson. In it he treats Tennyson's career as an example of "the normal type of what, in eirenmstances as fortunate as mortals may expect, the life and work of a modern poet ought to be," That is to say, Tennyson was the type of the poet who lives his life apart, taking no prominent part in politics, war, or the multifarious activities of existance. Says Mr. Lang:

"If we agree with a not unpopular opinion, the poet ought to be a kind of 'l'itanic' force wrecking himself on his own passious and on the nature of things, as did Byron, Burns, Marlowe, and Musset. But Tennyson's career followed lines really more normal, the lines of the life of Wordsworth wisdom and self-control directing the course of a long, sane, sound, and fortunate existence. The great physical strength which is commonly the basis of great mental vivor was not ruined in Tennyson by poverty and passion, as in the case of Burns, nor in forced literary labor, as in those of Scott and Dickens. For long he was poor, like Wordsworth and Southey, but never destitute. He made his early effort; he had his time of great sorrow and trial and apparent failure. With practical wisdom he conquered circumstances; he became eminent; he outlived reaction against his genius; he died in the fulness of a happy age and of renown, The full-orbed life, with not a few years of sorrow and stress, is what nature seems to intend for the career of a divine minstrel. If Tennyson missed the 'one crowded hour of glorious life,' he had not to be content in 'an age without a name. Taine, the French critic, has written somewhat contemptu-

Taine, the French critic, has written somewhat contemptionsly of Tennyson's "respectability" and of his placid life. The poet must have strong passions, said the Frenchman, or how can be sing of them? He must be tossed and whiteld in the stress of things, like Shelley's autumn leaves, "ghosts from an enchanter fleeling," or how can he voice such moods? Mr. Lang says on this joint:

"This is almost a hoyish idea, this idea that the true poet is the slave of the passions, and that the post who dominates them has some, the state of the passions, and that the post who dominates them has some, the surface and the passions of the common, as somebody has written about Wordsworth, tainly "Tennyson's was no "passionless perfection." He, tike others, was tempted to bear with ineffectual wings, against the inscrutable nature of life. He, too, had his dark hour, and was a subject to temptation as they who yielded to stress and died, or became unhappy waifs, 'young men with a splending hast." He must have known, no less than Musset, the artifactions of many a paradis artificted, with its bright visions, its houris, its others of oblivious of pain. "He had the look of one who had suffered greatly," Mr. Palgrave writes in his record of their first meeting in 182a. But he, like Goethe, Scott, and Victor Hugo, had strength as well as passion and emotion; he came unsecrebed through the fire that has burned away the wings of

so many other great poets. This was no less fortunate for the world than for himself. Of his prolonged dark hour we know little in detail, but we have seen that from the first he resisted the Tempter; 'Ulysses' is his 'Ketro Sathanas'."

Mr. Lang does not attempt to determine Tennyson's precise rank in the great roll of the poets of England. He says:

"We do not, or should not, ask whether Vergil or Lucretius, whether Æschylus or Sophocles, is the greater poet. The consent of mankind seems to place Homer and Shakespeare and Dante high above all. For the rest no prizelist can be settled. If influence among aliens is the test, Byron probably takes, among our poets, the

ANDREW LANG.

next rank after Shakespeare. But probably there is no possible test. In certain respects Shelley, in many respects Milton, in some Coleridge, in some Burns, in the opinion of a number of persons. Browning, are greater poets than Teunyson. But for ex-

quisite variety and varied exquisiteness Temyson is not readily to be surpassed. At one moment he pleases the un critical mass of readers, in another mond he wins the vertilet of the raffint. It is a success which scarce any poet but Shakespeare has excelled. His faults have rarely, if ever, been those of flat-Goued, 'thickandled' diblesses, of rhetoris, and the district of the contraction of the

Mr. Lang is so much of a controversialist that he could not refrain, even in a book on Tennyson, from indulging in a few dissertations of a polemic nature. He makes "The Princess" the text for a philippic against the "advanced" woman's movement and its "disputants, inevitably shrill," This last epithet draws an indignant reply from Mrs. Elia W. Peattie, of Boston, who writes an article in The Evening Transcript of that city under the title "A. Lang-Misocynist." Mr. Lang has also succeeded in exciting the ire of Mr. Frederic Harrison, and quite a passage of arms has taken place between the two in the English papers. Mr. Harrison says in one place: "Of course the merry-andrew of the reviews can not write a book without indulging in some of

those japes which, with or without his name, he loves to shower around the press. "The great Positivist also speaks of Mr. Lang's "incorrightle trick of sniggering,"—a phrase which, in the opinion of the Philadelphia Erst, "descrees to live long, because it is not only funus, but is also the embodiment of truth."

### THE RUSKIN CROSS AT CONISTON.

R USKIN once wrote that the best way to show respect for the dead was "not by great monuments to them which we build with our hands, but by letting the monuments stand which they built with their own." This expression of opinion, however, has not deterred his friends from creating two memorials of his life and work. One is a bronze medallion, unveiled in Westminster Abbey a few days ago by his consin, Mrs. Arthur Severn, in the presence of a distinguished assembly. The other is a Celtic cross, erected over his grave in the village churchyard of Coniston, the North Lancashire village in which he lived. "It was fitting," observes a writer in The Churchman (New York), "that the headstone to his grave should be a memorial of his affection for this North Country craftsmanship of the old time, when the spiritual life of the craftsman was intensely real, like his own. It was fitting, too, that this cross should be cut from stone quarried in the dale where he made his home, and carved by a local sculptor, once his own pupil, who should cover it with allusions to the life-work of that master, and with the says of the faith in which he died."

From the same paper is taken the following account of the

THE RUSKIN CROSS IN CONISTON CHURCHVARD.

details of the monnment and of the symbolsm that characterizes it:

The cross is of a single piece cut from the Mossrigg quarries, and is the same hard green stone or volcame ash that in other varieties makes the famous green slate of the Lake District. It rises seven and a half feet above the base. On the east side, which taces the grave, for the body is laid according to custom with feet toward the East, are inscribed the name and the dates of birth and death. Above and below are carved designs symbolic of the stages of Ruskin's career. First there is the figure with the lute, laurel-crowned - this is the young Ruskin, the versewriter. He has not yet found his great vocation as the master of rhythmic prosc. He sits at the foot of the stone. The inspiration here is classical. It suggests no profound passion, and one is not surprised to find it necessary to pass through a tangled mesh of interlacing lines, suggestive of varied experience, before the eye rests upon the medallion typifying the next stage of his career. That is the rising sun, his own device on the cover of early editions of 'Modern Painters,' and, as students of his painting know, his favorite effect in landscape. The mountain lines in this medallion may suggest, to those fumiliar with Ruskin's life, his association with what he called 'his true mother-town

of Geneva," and the pines also have particular application to that period. The medallions above this, the Lion of St. Mark, and the candelabrum, refer too obviously to 'The Stones of Venice' and

The Seven Lamps of Architecture\* to eall for comment. . . . . . . . "Passing now to the south side, we find a panel filled by a floral scroll with animals among the branches of a sort of conventionalized tree, symbolic, of course, of the charch as the Tree of Life, or the Vine, and particularly appropriate here for the sangestion of Raskins\* interest in natural bistory, for among the animals are three of his, especial favorites—the squirrel, the king-fisher and the robin.

"On the western side tie latter half of Ruskin's life, filled with his campaign against the modern commercial spirit, is typified. First there is a conventional representation of the laborers in the vineyard, which Ruskin took, as it were, for the text of his 'L'int This Lost'."

"Then there is an altegorical suggestion of 'Sesame and Lilies'; then the central figure, the Angel of Destiny, Pros Clavigers with the club, the key, and the nail, symbolizing strength, patience, and law, Above this, matching the oval of the lilies and the grain, is the 'Crown of Wild Olives' bound by a ribbon, whose interfacing pattern recalls once more the mystery of like whose interfacing pattern recalls once more the mystery of like and the state of t

"The northern side of the shaft has an interlaced pattern without other ornament. By these lines intertwining without appareut purpose the artist means to typify those sad closing years of weak and weary waiting for the etornal reward. This, too, is a symbol of the mystery of life,"

#### RISTORI ON THE PRESENT THEATER.

A LL Italy recently observed the eightieth anniversary of the birthday of the retired tragedienne, Adelaide Ristori. Gala performances were given in many cities in her honor, and kings, princes, and other notabilities sent her gifts and messages of regard and affection. Ristori has lived in retirement for over

ABELAIDE RISLORI.

fifteen years, the she has occasionally taken part in representations for charitable or othor public purposes. She has, however, retained her intense interest in things dramatic and theatrical. and has followed the developments of the stage since the days of her sway and artistic reign. The correspondent of the St. Petershurg Novoye I'remya has lately "interviewed" ber, and sends to his paper an interesting account of his visit to and conversation with the great actress.

Ristori has no sympathy with present theatrical tendencies. She regards the plays now given to the public as devoid of beauty, vital significance, and artistic merit. The theater is decadent, in her view, and the actors are to be pitied. There is no opportunity for genuine talent in the modern repertory, and hence the disappearance of great neting. There is plenty of yeuius in the world, but it can not reveal itself, being fettered, confined, misdirected, and put to unworthy uses. To quote the Russian correspondent's account of Mme. Ristori's remarks:

"Dramatic literature to-day differs radically from that which it was my privilege to represent and interpret. In fact, it is like looking at two worlds. We used to play Shakespeare and the classics, and all our efforts were directed toward realizing the concentions of the great masters, to whom we owe so many splended images and characters. To-day the stage is something wholly different. The classical repertory has suffered fatally from the changed demands of the public. In obedience to these demands playwrights now produce pieces that are by no means badly constructed, but which, broadly speaking, are trivial, reflecting the prosaic and seamy side of the routine of life. The absence of mighty works, on the other hand, may be due to the absence of great artists, capable of moving audiences to sincere grief or sin, cere joy "

What of Salvini, Bernhardt, Duse? Mme, Ristori was asked-Her answer was that Salvini was one of the passing generation of actors and could not be cited in defense of contemporary acting. Bernhardt was a great actress of an extraordinarily manysided talent, but she too is of the old school. Of Duse, the representative of the "new" acting and of "naturalism." Mrne. Ristori said:

"At the beginning of her career Duse astonished me by the sincerity and warmth of her art. I thought that nature had dowered her with a rich gift, and I hoped to see her in heroic parts. With her talents she seemed capable of so much that it was a shock to me to see her devote herself to the peculiar repertory of D'Annunzio. I fear that, thanks to such plays as 'Francesca da Rimini, her art is gone. Some years ago I expressed the opinion that she had entered upon a dangerous path, and I was not mistaken, since she has achieved nothing from that time forth, and has created no new character. How unfortunate and deplorable this is, and how I pity her!

Ristori does not object to realism in the sense of fidelity to nature, but what now passes for realism she finds superficial, external, drab, and banal. In her days, she says, artists studied detail with great care, and she herself never created any part without long and arduous preparation, visiting the scenes reproduced whenever possible and living in the atmosphere of the play. She dwells upon the efforts which she spent on the somnambulism of Lady Macbeth and on the realization of Queen Elizabeth in "Mary Stuart." But the detail in her days did not. she says, obscure the essential humanity, the vital truth of the grand masterpieces. The drama must reflect real life, but trivial and minute things are not the whole of life. The great joys and the great sorrows, the deep emotions, must be treated by the dramatist and actor as the real content of life. And these have been banished from the contemporary theater.-Translation made for THE LITERARY DIGEST.

### NOTES

MR. HALL CAINE is now engaged upon a play which will occupy him for me time. His nest important literary project will be his long promised "Life of Christ"

Frw recent books of fiction have attained the phenomenal popularity of "David Harum," which is still selling briskly three years after its publica Measts. D. Appleton & Co., its publishers, announce that the sales of the book have reached a total of 650,500 copies.

ALBERT BIFESTADT, who died in New York a few days ago, was one of the foremost American landscape painters. He studied for some years under Lessing in Düsseldorf, Germany, and introduced into this country what is known as the "Düsseldorfian" manner of landscape. In his tours in the West and in the Rocky Mountains he gathered material for many interesting subjects, the some of his most important pictures were painted on Switzerland and Italy.

M. SULLY-PRUDROMME, of Paris, the winner of the Nobel prize of \$40,000 for Idealism in literature, aunonnees his intention of devoting this sum to the good of his fellow craftsmen in the literary field. With it he has estab-Inhed a fund to provide for the publication of the works of deserving poets. "This gracious act," says Hurper's Weekly, "is deserving of the highes praise, and we trust that in its results we may find work that is wurthy of the venerous hand that passed along to others the good fortune that came within its grasp."

DR. A. CONAN DOYLE has sent to the London Times an Interesting account of the steps which have been taken for the distribution of transla-tions of his bunklet on "The War! Its Came and Conduct." Dr. Doyle believes that the book will vindicate both the British policy and the conduct of the British army in South Africa. He has accepted no reminneration for his work, and it is his purpose to send a copy of the book to the public men of every country in the world. In furtherance of his aims Dr. Doyle has received subscriptions varying from fifty pounds from Lord Rosebery to sixpence from a schoolboy. Arrangements have already been made for translating the book into German, French, Scandinavian, Italian, Spanish, Russia, Hungarian, and Portuguese.

### SCIENCE AND INVENTION.

### THE STANDING OF AMERICAN SCIENTISTS.

XIE printed recently in this department a description of America's inferior place in the scientific world as given by Carl Snyder. This is followed in The North American Review (February) by an explanation of the conditions that discourage scientific work in this country, from the pen of Simon Newcomb, the greatest American astronomer. While maintainlng that Mr. Snyder's article hardly does justice to American science as it exists to-day. Professor Newcomb acknowledges that we are just beginning to rise above the state therein described, and that conditions here are decidedly discouraging to pure scientific work. The principal reason for this, as he views it, is the general attitude taken toward such work by Americans. We look on "science" as a sort of profession, whereas, as Professor Newcomb points out, when work begins to be professional it ceases to be scientific in the strict sense. But the worker in pure scientific research has thus no standing before the public in comparison with the professional or business man, and public honors are not for him. Among many illustrations of this, we select Professor Newcomb's comparison of our National Academy of Sciences with the similar bodies in European countries. After describing the status of the Royal Academy of London, the academies of sciences in Paris, St. Petersburg, and Berlin. the palaces in which they are housed, the social position of their members, the closeness of the bond between them and their respective governments, he reminds us that our own National Academy was chartered specially as an adviser of our Government in matters relating to literature, science, and art, and that it has performed notable public service along these lines, particularly in the establishment of the Geological Survey and the present forestry system. He goes on to say :

"Looking at what foreign governments have done for their academies, the question uaturally arrases: What has our Government done for our own? The answer is: Absolutely nothing. Its condition as an academy of sciences is bumilating. It has no local habitation. It must pay its expenses, clerical and otherwise, of every kind, by the contributions of its members. In the very of foreign academies it is the official representative of our growing bedien. When it comes to doing anything in a representative capacity to upbeld that rank, the expense must come out of the pockets of its members.

"Nor is there a prospect of anything better in the future. Instead of increasing in influence, it seems almost to have passed out of recollection as a factor in our progress. Its last and greatest work for the Government, that of devising a forestry system. marked its disappearance from the public view. It would be interesting to know how many men in Congress know what it is or are even aware of its existence. Whether a census would show one in ten or one in fifty, no one can say. One hardly knows where to look for a spectacle less befitting our civilization than that of such a body of men searching through Washington to find a suitable place for their meeting; debating where they shall put the publications presented them by similar bodies abroad; grateful to one of their officers when he has a spare corner in which to keep their records; wondering what shall be done with an invitation from a foreign organization to send a delegate to a celebration or an international conference.

"If the picture needs any additional touch, it is given by the fact that the Academy is required by its charter to give its services to the Government gratuitously. Those of its members who spent their time in devising the two administrative systems which I have described could never receive a dollar for what they did; and cloady the Academy may be said to exist and live in the hope that, at some time in the near or distant future, the Government may feel some need for its gratuitous services as an anthority on the multifarious sclentific problems with which public administration is confronted.

"The founders of the Academy believed that the spectacle of

a body of the ablest scientific investigators giving their services without reward to promote the public weal would act as an inspiring example, impress the public with a high sense of the dignity of science, and elevate learning in the eyes of our political leaders.

"A cynic might reply that this only shows how slight was the knowledge of the world possessed by these men. Congress has no way of measuring the value of services lying outsale the usual range of its experience except by their cost. When one works for nothing the value set upon his services will naturally be expressed by the mathematical zero. The idea that Congress would ever supply a place of meeting or a clerk to such men would never have been entertained by menof practical sagacity.

would never have been entertained by men of practical sagacity.

"Between these views, I leave it to the reader to determine where the truth lies. I do not think any close observer of the operations of government during the past thirty years will contest the following proposition: If Congress, when it chartered the National Academy of Sciences, had supplied it with a fine building for its meetings, records, and collections, had pad the expenses of overy member who attended its meetings, had supplied it with the necessary assistance to enable it to conduct business continuously, and had provided that no appropriation should be made for any scientific object until it had been referred to and recommended by the Academy, the outlay would have proved, from a purely sordid point of view, a good paying investment."

This state of things is ascribed by Professor Newcomb to a, "want of touch between our academic and political classes," which, he says, is at the same time the cause and the effect of the imperfections in the apprehension of things scientific by our public men. He adds:

"It is clearly abnormal. If a statesman can not be expected to have a close acquaintance with the principles of science with should at least be able to appreciate the special relation of each other according to the public welfare, and should know when or to whom to go for light ou the relation of a scientific subject to the Government."

#### WIRELESS TELEPHONY BY ARC-LIGHT.

THE objectionable character of the word "wireless" as applied to telegraphy and telephony by ether waves is brought again to notice by the invention of a new telephonic method to which this term is applied by the Revue Stientifyew (February S). The method certainly employs no wires, but it is simply an adaptation of the photophone of Graham Bell. Says the writer:

"It is well known that an arc-lamp fed with a continuous current makes a peculiar noise, of considerable intensity, when, in the neighborhood of the corresponding electrical conductors and parallel to the current that traverses them, circulates a second current, feeble and intermittent, like that of a telephonic installation. If we speak into a telephone arranged in this way all the sounds are fearly neuroduced in the arra-lived in

"In reality the vibrations thus obtained correspond to variations of leat and of luminous intensity in the are. From this demonstration came the idea of wireless telephony. In this telephone the transmitter is combined with a reflector that directs the rays emitted by the arc-light toward a receiver, placed at a great distance, and consisting of a parabolic mirror, of a plate of selenium placed, at its ceuter, on a telephonic circuit with battery, and of a microphone placed behind the parabolic mirror.

"Selenium has the property of changing its electric conductivity under the influence of variations of light. The luminous waves of variable intensity that strike the receiving-mirror, when any one speaks before the microphone, have the effect of varying the conductibility of the selenium and consequently influence the current of the telephonic receiver, which thus reproduces the sounds emitted. Thus we have a wireless telephone.

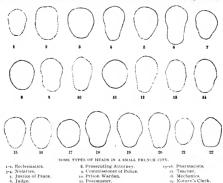

"This arrangement can also be utilized for the reception of despatches and their indefinite reproduction, as in a phonograph. The despatch may be registered by moving at high speed, before the luminous source or before the receiving-mirror, a photographic film, on which the varying intensities of the light are thus inscribed. To reproduce the corresponding sounds the film thus treated is passed again at the same speed between the concentrated rays of a source of light and the solenium plate; the more of less clear of darkened parts of the film absorb a variable quantity of light, determining variations of conductibility in the selenium and corresponding emission of sound by the microplone. The inventor of this arrangement for the indefinite reproduction of sounds obtained by luminous nethods, M. Rulmer, proposes for his arparatus the name of "photographone," by analogy with the telegraphone of Poulsen.

"The applications of this new system of wireless telephony would seem at present to be rather limited. The most interesting is the oral communication of ships with one another or with the shore."—Translation made for The LITERARY DIGEST.

### APTITUDES AND THE SHAPE OF THE HEAD.

IF there is any relation between the outside and the inside of the skull—between the shape of the head and the character of the brain—we might well expect that persons having the same aptitudes would resemble each other in the contour of the craminm. Scientific measurement of the skull has not shown this

to be the case, we are told by Paul Combes in Cosmos (lanuary 4). He gives an interesting account of an attempt to supplement scientific measurement by mensurement undertaken for a much more prosaic purpose. namely. the making and fitting of hats. The machine used by hatters to give the contour of the head furnishes us with excellent data, and M. Combes gives us some records from a small French city which confirm his assertion that the shape and size of the head is a

12. Tax Collector.

13. Appraiser,

natter of race, not of occupation or aptitude. M. Combes first describes the latter's measuring or fitting apparatus. This apparatus atus is a sort of mechanical hat whose interior is formed of a series of narrow articulations that exactly fit the contours of the head. When the device is in place a series of incelles corresponding to the articulations mark on a sheet of paper the outline of the head, reduced one-third. From a series of these reductions, further reduced, have been selected the diagrams that accompany this article.

2. Lawyer.

The indications of the instrument, we are told, furnish the most unexpected results and the most disconcerting surprises:

"They show clearly, in all cases, that no material correlation exists between the exterior conformation of a man's head and his special aptitudes, the qualities of his mind, his Intellectual and moral worth, his work or his favorite occupations.

"Our figures result from the examination of 570 diagrams taken . . . from a hatter in a small city in Normandy. They thus come from a common and restricted source and can be profitably compared from all standpoints.

"That which strikes one at first is the surprising diversity of heads among the dwellers in the same region—a region where difference of-races is less marked than in a large city. If we go into details, the surprises are multiplied and accentuated.

"Notice in the first place the two diagrams of ecclesiastics, Figs. 1 and 2, of regular form, but very different both in size and contour.

"Figs. 3 and 4 represent the cephalic diagrams of two notaries, the first clearly brachycephatic (short-skulled) and the second no less clearly dolichocephalic (long-skulled).

"The justice of the peace of Fig. 5 and the lawyer of Fig. 7 have tendencies to brachycephaly, but the judge of Fig. 6 is an accentuated dolichocephalic.

"The prosecuting attorney, Fig. 8, is brachycephalic, but not in the same way as the notary of Fig. 3. The head of the comissary of police, in Fig. 9, presents some analogies with that of the notary in Fig. 4 and the judge in Fig. 6; but they have characteristic differences.

"As to the prison warder, Fig. 10, his dissymetric head presents straight lateral contours that are different from all the preceding,

"In the case of the postmaster, Fig. 11, we find the round head of brachycephaly still more perfectly than in the types of Figs. 3 and 8. The tax-collector, Fig. 12, is a dolichocephalic compar-

able, but not exactly similar, to the preceding,

"The appraiser, Fig. 13, shows a yet different form of dolichocephaly, with median lateral protuberances which we find again in the veterinary. Fig. 14; but in this case accompanied by much more regular posterior and anterior curves.

"Next come two druggists, Figs. 15 and 16. The first resembles the justice of the peace, without being precisely similar. The second has a new type of curve, absolutely dis-

tinct.
"The teacher is a brachycephalic, Fig. 17. The mechanic, Fig. 18, is a modified dolicho-

n modified dolichocephalic whose cephalic curve is posteriorly regular and harmonions. The notary's clerk, Fig. 19, constitutes an intermediate

20, 21, 22. Tauners.

"Finally, we have three tamers who deserve our attention, since tanners—in France-may be called to the highest destines, . . . . which of the three types of tanners, whose diagrams are shown in Figs. 20, 21, and 22, bears in the conformation of his head the indication of the future favors of fortune? Is it the dolichocephalic of Fig. 20, who might well have been, judging from his explaine curve, the teacher of Fig. 12 or the notary of Fig. 4? Is it the small-headed tanner of Fig. 21, who recalls by dimension, if not by regularity, the exclessinate of Fig. 12 Is it the square-headed tanner of Fig. 22, the straight sides of whose diagram recall those of the prison-warden of Fig. 10?

"The point can not be too strongly insisted upon, that there is decidedly no relation between the form of the head and the intellectual faculties. These are found to the same degree in an infinite variety of cranial conformations. The general form of skull depends especially on the race and varies with it. It is a matter of origins and no to datitudes.

"Thus, in Europe, the peoples of Cymric origin, the dwellers

on the shores of the Mediterranean, the North Germans, the Swedes, and the Norse are all dolichocephalic. On the other hand, the peoples of Celtic origin, the South Germans, the Austrians, the Hungarians, the Swiss, the Irish, and the Gauls are brachvechalic.

"But even here there is nothing definite. What is exact in theory becomes inexact in reality, because of the incessant migrations and the resulting mixture of race. These migrations began as long ago as the Quaternary period, and we may imagine the intermarriages, the mixture of blood, and the resulting complex modifications that have been going on since that far-off time.

"Prudence in deduction should then be considered a capital virtue of craniologists. Let us wish them plenty of it—without expecting too much!"—Translation made for THE LITERARY DIGEST.

#### ANCESTRY OF THE AMERICAN INDIAN.

THAT the racial problem of the Western hemisphere has now been practically solved is asserted by Charles Hallock, who contributes an article on the subject to The American Antiquarian (January-February). This solution, he says, clears up not only "the origin of the American Indigenes (miscalled Indians), but approximately the antiquity of their progenitors whose rained and silent cities, like those of Asia Minor, long since passed out of history, and whose massive pyramids, temples, and palaces vie with those of the Old World, and are inferentially not only coeyal with them but closely related." Mr. Hallock believes that these mined cities of Central America were built by immigrants from Korea, and that they were subsequently wrecked by great disturbances of the earth's crust. Their inhabitants scattered in every direction and became the ancestors of all the present Indian tribes, who are therefore degenerate descendants of a people far advanced in civilization. Says Mr. Hallock :

"It is believed that the progenitors of the ancestors of the Mexicans were an Asiatic colony from Korea, which was at that time tributary to the Chinese empire, a fact which accounts for coincidence of dates in the first half of the sixth century, and this opinion is confirmed by Chinese manuscripts as well as by striking similarities of appearance, language, and customs, and a proficiency in the arts and architecture. Their writing was in hieroglyphics exclusively, and this medium of communication is spread all over the continent. History shows that the Koreans migrated to escape tyranny, undertaking a sea voyage of nine weeks to the northeast. No matter who first peopled Central America, the Koreans certainly were in communication with America as far back as the second year of the dynasty of Tsin, Emperor of China, who declared war against Korea. Migrants were able to maintain the high civilization of their forebears as long as their basic relation and environment remained unchanged, a postulate which is abundantly attested by archeological evidence, as well as by the enduring testimony of the petroglyphs. But finally came those stupendous terrestrial dislocations, upheavals, emergencies, droughts, denudations, and associated dynamic phenomena, which punctuated the lapse of geological time and changed the contour of the continent. By the same great cataclysm which broke up the 'foundatious of the great deep,' according to the Scripture, and inundated so large a part of the globe and its antediluvian fauna and flora, the fructifying rivers of Central America were engulfed, and the acequias, aqueducts, and irrigating canals were destroyed or rendered useless. Some disjointed records of this overwhelming catastrophe are inscribed upon pyramids, temple walls, monoliths, and portices of those massive ruins which attest to their extinguished greatness, while oral traditions, next in historical value to the libraries which Cortez and his fanatical priests destroyed, have been transmitted down the centuries, even to Southwestern Indians of the present day. Drought, famine, malignant diseases, persistent internecine wars, and ultimate depopulation supervened, and after persistent efforts to maintain themselves on the home sites, the discomfited survivors scattered, even to far-off Alaska, and up the eastern slope of the continental ridge to the mouth of the Mackenzie River, leaving traces of their successive occupations all along the Pacific coast and the mid-continental route, not only in memorials of massive masonry and exquisite pottery, but in linguistic similarities, religious practises, mortuary rites, superstitions, social habits, oral traditions, and physical resemblances of a marked character. For many centuries large communities tarried in Mexico. New Mexico, and Arizona, sections of which were populous up to the arrival of Coronado in, 1540; but finally aridity of the soil, caused in large part by forest denudation, frequent tidal waves, the deflection of surface waters into subterranean rock fissures, the merciless raids of the Spaniards, and internecine wars, scattered them over the lava beds and alkaline wastes of sage-brush and cactus, to eke out a precarious livelihood with their starveling flocks. The remnants ultimately betook themselves to the cliffs and mesas, which they fortified, and attempted to subsist on crops which they forced from scantily irrigated gardens on the arid plains below. This for a distressful period, and then northward again to more peaceful and fertile localities in Eastern Colorado, where melting snows from the unlifted continental divide afforded perennial moisture. Here they maintained a long-protracted status as agriculturists and shepherds, establishing thrifty towns and villages, of which a few remain to this day as 'pueblos.' Records of their vicissitudes and dire extremity are necked upon many a neighboring rock-of the continued attacks and defenses and how the cliff-dwellers-were finally cut off by their enemies, and how few escaped. . . . . .

"The advent of the Spaniards and their ruthless quest for gold broke into the bucoich life of the Pueblos. Many were exterminated, while others, harassed and impoverished, abandoned agriculture in despuir and took to the chase for a livelihood. From that to semi-savagery the lapse was easy; a condition which was aggravated by the religious superstitions which they retained, involving human sacrifice, self-torture, immolation of war prisoners, and sundry barbarous eremonies which date back to carriest times, and obtain even now in bolated parts of North sun worship of Chichen-tra and Pern, with its attendant crudits. All the Indian tribes burned their captives on occasion—a survival of ancient rites.

"Untold and uncalculated years it took for the Central American migration to reach the western verge of the Great Plains. which had emerged and grown to grass during the interval since it was the quaternary floor of the sea. For nearly four centuries their polyglot descendants, who were dubbed aborigines by European explorers, have been an ethnological puzzle to the world: but time seems to have solved the problem. The hypothesis of the reversion is easy. Their progenitors, like all pioneers, unquestionably took with them all necessary 'store clothes,' tools, seeds, mechanical appliances, and domestic utensils; but after they were isolated from the parent stock and base of supplies, they learned to substitute makeshifts for whatever was worn out or lost. Dresses of skins, furs, and plaited grasses replaced their home garments, and implements of stone, horn, bone, shell, and ivery took the place of their original tools of iron, bronze, and copper. Some of the more intelligent and energetic discovered mines of various ores, and worked them in a rude fashion for a while, like those at Lake Superior, but the industry was finally abandoned because it was easier and cheaper to use what was handlest. Metal ornaments, pottery, baskets, footgear, and woven fabrics were retained the longest, because they were indispensable. The manufacture of these was an art that could not be lost. Reversion is not necessarily a slow process. It depends largely upon the environment. Intercourse brightens intellect. Isolation clogs it, and will sometimes hanish it. There are to-day among the sea islands of South Carolina the grandchildren of ante-bellum negroes whose inane articulations are unintelligible to any but their own kin-a lapse of less than half a century."

According to Mr. Hallock, the Indians may be divided into two great classes, the forest tribes and the hunting or horse tribes. Between these there speedily grew up eamity. The Chippewas may be taken as a typical example of the first class and the Siouz of the second, and the last great battle between these two was fought as recently as 1837. Mr. Hallock believes that the great series of Western mounds had their origin in these

interminable wars between the sedentary woodsmen and the fierce plainsmen. Some are entrenchments, displaying "much military engineering skill." while others are "great tumuli. where hosts of the slain are buried." Others still were used for "sacrificial purposes, for dykes, as sites for temples and dwellings, as refuges from inundations, as amphitheaters for ball games, and for ornamental purposes, as in public parks and gardens of the present day. Many in the semblance of elephants, leopards, turtles, rats, snakes, deer, and the like were copied from the Aztec and Toltec gardens, and from others extant in the Zuni and Mohave country. They were reproduced just as we copy patterns from the Old World," Mr. Hallock thus agrees with the best modern authorities that there was no race of vanished "mound-builders." but that the mounds were the work of the immediate ancestors of the Iudians of to-day. In conclusion, the writer asserts again that "every new archeological discovery adds to the analogs which go to make up testimony to establish the more than hypothetical origin of our American aborigines, and the close relations between their ancestors of Central America and the peoples of Egypt and Asia."

If it be true that a race far enough advanced in civilization to construct the clitics whose ruins are the wonder of Central American travelers has degenerated into the wild Indian tribus of today, that fact is certainly provocative of thought. We are customed to assume that our descendants must advance in civilization no mainter what their environment may be. After all, we can reassure ourselves by remembering that, according to this theory, the "aboriginal" races of this continent were Asiatise. Perhaps Caucasians would not have deteriorated under the same conditions."

### THE FLIGHT OF A HAILSTONE.

THE formation and growth of hallstones during their flight from cloud to earth is described in Knowledge (February), by Arthur H. Bell. Ite describes a hallstone as "an aggregate of tiny crystals disposed in concentric rings or sones"; and these sones tell the story of the hallstone's journey to the earth. He writes:

"At the heart of every hailstone is a tiny atom of dust, which may be considered to be the very foundation of the whole icy structure. These atoms of dust pervade every part of the atmosphere. Not only are they found in the lower strata of the air. but the winds carry them far above the highest mountains, and no matter whether samples of air obtained by balloonists or by mountain travelers are examined, minute particles of dust are always everywhere to be found. Indeed, it is becoming understood that without an atom of dust upon which the moisture of the air could settle there would be no rain-drops, no snow, no fog, dew, clouds, or hail. Without these minute platforms, as they may be called, upon which the poisture as it condenses could alight, rain would be continually pouring down upon the earth, and it is these motes that keep the moisture broved up in the atmosphere until such times as circumstances compel them to yield up the aqueous supplies which they so industriously collect. Supposing, then, that a little vapor should happen to condense on a particle of dust floating aimlessly through the air. there is a beginning made of what, under favorable conditions, may ultimately grow to a full-sized bailstone. . . . Imagining now the journey to be well started, it will at once be realized that the traveling hailstone will pass through strata of air that differ very much as regards temperature and moisture. Some of the air will be above the freezing-point and other layers will be below it; while it will be no uncommon episode for the dropping hailstone to plunge sheer through a cloud that may be many thousands of feet thick. The hailstone itself, with its heart of ice, is always below the freezing-point, so that any moisture that settles on it is promptly frozen and forms a girdle of ice around the central nucleus. An examination, indeed, of any hailstone shows that these icy girdles are its most characteristic feature. It will also be observed that these girdles or zones are of two kinds, and that they are alternately clear and opaque. It is these zones that tell the most concerning the incidents of a wonderful journey, for they are produced by the different strata of air through which the halistone passed, each country, as it were, over which the journey was made impressing Its characteristics on the flying traveler."

Effect of High Aititudes on the Blood.-Professor Gaule, of Znrich, who, accompanied by his wife and the aeronaut, Spelterini, recently made a balloon ascension for the purpose of making microscopical examinations of the human blood at high altitudes, has just published an account of the trip in the Neue Zuericher Zeitung. The result of the investigation was very eurious. Before starting, Gaule had examined specimens of Spelterini's, his own, and his wife's blood and recorded the number of corpuscles, the depth of color, and the density. At a height between 4,400 and 4,700 meters [14,500 and 15,600 feet] specimens were drawn for comparative examination. In all three persons it was found that the number of corpuscles had increased greatly, the only a few hours had elapsed between the two sets of observations. The increase was greatest in the case of Frau Gaule, amounting to 40 per cent. In his own blood at this great elevation Professor Gaule found 8,800,000 corpuscles to the cubic millimeter, which he thinks is the largest number ever found in human blood. A second ascension gave similar results. "We determined," says Professor Ganle, "the depth of color as well as the number of corpuscles. This should have eliminated errors, as two distinct sets of apparatus were used. And if the result were the direct effect of atmospheric pressure, both of these characteristics should increase or diminish together.
"But the color fell off while the number of corpuscles increased.

"But the color (ell off while the number of corpuscles licreased. This can be explained only by supposing that the pressure acts are active and susceptible of rapid change. The blood-cells, are active and susceptible of rapid change. The blood-cells, therefore, are not constant, as has been hitherto supposed, but exceedingly variable. . . . Probably these changes in the blood cells, the constant of the constant

#### SCIENCE BREVITIES.

"At the meeting of the Connecticut Academy of Sciences on February," rays, 200000, "Priof. As, Everill exhibited several remarkable photomatic process, invented by Mr. A. Hyatt Verrill, of New Haven. One these photographs was a Bermuda landscape in which the beautiful root the water, etc., were well brought out. Three other plates were copies of graphic reproduction of these showed accurately all the delicate shades of green, blue, pink, purple, yellow, and orange. The intense red colors apdonts this will most be remerched by further aperliments now in progress.

Is discussing the trans-istumian canal, Engineering, New ways (February 2001, "As for the rative merits of the two routes, we can add nothing to what we have already said, except that those who all present argue for the property of the pr

A CURIOUS fact has been ascertained during the recent survey of India, namely, that the northerly deflection of the plumb-line ascribed to attraction by the great mass of the Himalaya and the Tibetan upland is reversed along a comparatively narrow belt between 22° and 24° latitude crossing fadia from east to west for one thousand miles. "Here." says The Tables (London), "the deflection is southerly, while the northerly deflection reasserts itself farther south, and is continued so far as ss north latitude. The sone, so strangely exempted from what has been supposed to be a general law, runs across central India from the delta of the Ganges to that of the Indus, but well to the south of the great Gangetic plain." These facts are discussed by Major Burrow's theory is that before the Royal Astronomical Society. Major Burrow's theory is that the phenomenn "follows the axis of what he callx a subtertanean chain of mountains causing the greater density of the earth's crust in this partico The hypothetical range would, we are at liberty to conjecture, either have innudered bodily in some great catastrophe, or subsided gradually and been submerged under allovium and silt. The fact opens up an interesting subject for the discussion of geologists."

### THE RELIGIOUS WORLD.

### WAS DANTE A ROMAN CATHOLIC?

N interesting point raised in Dante's "Divine Comedy." and one about which some of its most profound interpreters have differed, relates to the religious views of its author, Was he a schismatic, or a pagan, or a Papist? Or was he, as has been suggested, a combination of all three? As is well known, Dante consigns several of the popes of his day to his hell, and in more than one passage of his poem he challenges the doctrine of the "temporal power" of the Pope. Rossetti went so far as to say that the allegorieal meaning of the whole poem hinged upon the political opinion of Dante on Papal sovereignty. According to this interpretation, the "Divine Comedy" was intended to show that temporal dominion was the bane of the Papacy and the world; the Ghibelline party was the party of love, of life, of light, of salvation; the Gnelph party was naught but darkness, hate, and perdition; Rome was hell and the Pone was Satan.

In the opinion of an Italian critic, Poscoio, Dante's purpose was to reconcile Christianity with paganism and to restore to a place of honor the old mythology and the doctrines of ancient philosophy. This purpose, however, he artfully concealed beneath the allegories of the "Divine Comedy," because he feared religious persecution and political violence.

Still other interpreters, including Francowitz, Dn Plessis-Mornay, and Landino, claim to have discovered a cipher sy which it is conclusively shown that Dante was the prophet of the Reformation and announced the very date (1327) in which Littler was to begin to preach his heretical doctrines. They hail Dante as the precursor of Protestantism, and point out that he dubbed the Papacy the "had woman of the Apocalypse," and in this apparent detestation of the Papacy put himself in almony with the most pronounced anti-Cathoics who were to follow him.

Against all these views a protest is entered by an American Roman Catholic student of Dante's life and work-the Rev. E. L. Rivard, of St. Viateur's College, Bourbonnais, Ill., who contributes a paper to Mosher's Magazine (New York, January). in which he endeavors to clear Dante's memory from what he regards as the aspersions made upon it. Rossetti's interpretation he regards as "untenable, pay, as an outrageous calumny," "Is it possible," he asks, "that a man with a mind so luminous [as Dante's] and a heart so passionately fond of justice and truth could or would stoop to conventional tricks and wretched artifices of language, to a poetry of prize puzzles devised to conceal truth? Dante would then himself become the most insoluble of enigmas," Foscojo's theory, too, Father Rivard considers hardly worthy of serious notice. "In introducing mythology into his poem," declares the writer, "Dante makes no profession of paganism; he simply avails himself of a liberty generally granted to poets and other artists. . . , Dante's acknowledgment of and admiration for the splendid natural endowments of pagan scholars like Vergil, Homer, Aristotle, Plato, Cato, and others, is the noble tribute of high-born genius to other genius. Ever and far above them does he place the Christian sages and saints." Father Rivard continues:

"There remains the third interpretation, which would make Dante a very poor Catholic, one whose orthodoxy was so shaky, whose allegiance to the Papacy was so doubtful, that Protestants can claim him as their glorious predecessor. It is true that once Dante was summoned to appear before the Inquisitor, who somehow or other has become the veritable bogyman of the Protestant mind. That happened this way: Certain Franciscan friars, being offended because Dante land represented their order as not sending any more representatives to beaven, took him to task for

٠

it and demanded that be appear before the tribunal of the Inquisition to give satisfactory evidence of the completeness and genuineness of his faith. Dante asked and was granted the night, during which he draw up in most charming verse a profession of his Catholic beined. This he submitted to the twelve grave Judges, who were astonished and delighted at the beauty of the expression and the unexceptionable orthodoxy of the doctrine which the poet professed. That the inquisitor dismissed Dante with warm congratulations and laughed at the rather suspicious friars is evidence that the Inquisition was not, as it is often represented, the extinguisher of sciences or the hinderer of genius."

With regard to Dante's attitude toward the Papacy the writer says:

"Dante professes the highest regard for and pays the highest tribute of veneration to the Papacy, which he considers as the holiest of institutions. . . . That he hated some of the Popes on holiest of institutions. . . That he hated some of the Popes on the Papacy and the Papacy and the Papacy all the menchis would not suffer such a holy and dignified office to be thus lowered and disgraced. Indignation, especially when it is conscious of being righteous, is no sin. It is not heresy for you or ne to believe the Pope capable of various crimes. The Pope, tho infailible, is not impeccable. Dante thought he had sufficient evidence to convict certain Popes of certain sins and hence he evidence to convict certain Popes of certain sins and hence he thorough a hater of these Popes as he is a faithful lover of the Papacy."

Dante, then, so far from being an enemy of Roman Catholicism, "stands out from among the many splendors of philosophical and theological doctrine in the 'Diviue Contedy' as a grand exponent of Catholic verity." Father Rivard concludes:

"The interpretations we have been considering rob. Dante himself of all his giory, the glory of a great and noble conception so spiendidly executed. This grand conception suffers violence at the hands of those who trim it to fit their small views of the world and its institutions. These interpretations, hastly, would not the church of the glory which she rightly claims of having nutrured and inspired such a genius, of having brought forth a son capable of so sweetly and so strongly singing the exalted beanty and sanctity of her doctrines. As Catholic students jeal—least—or all those who would rob m of him in the broad day-light of his radiant Catholicity, we say emphatically and peremptorily: Hands off!"

#### A CHRISTIAN ESTIMATE OF MOSLEMISM.

THE study of Oriental peoples and religions by the scholarship of the Christian Occident has resulted, among other things, in a revision of the opinions entertained traditionally by the friends of Christian missions on the merits of the Mohammedan system of religions teachings. The most significant utterance recently made in this direction is from the pen of the well-known German missionary and traveler. Sir Pastor W. Faber, a leading pupil of Delitsach, a traveier in Mosiem lands, and especially a student of Bahism. In his quarterly pamphlets, "Briefblätter," published in Berlin, he expresses these views:

Everybody who for the first time reads the Koran and comes into personal counter with Molammedanium is astonished and then simply amazed to see how nearly the Molammedan way of thinking agrees with the Christian. It now pertains to Christian cuture in general to have read the Koran, and the reading of this book shows how wonderfully much Mohammed has taken from the Bible and how much more closely Islam is related to Christianity than it is to Judaism or to Buddhism. On the other hand, a careful reader will not fail to recognize the significant fact that the central doctrine of the Christian systems, namely, atonement through the blood of Christ, has been entirely excluded from the Mohammedan doctrines. This explains,

also, why that liberal class of Christians who have themselves given up this central doctrine fail to see any substantial disagreement between the two great creeds. Honesty, however, compels every candid student to acknowledge that the old views formerly eatertained in Christian circles concerning Mohammedanism, according to which the teachines of the great Arabian prophot are nothing but devil's doctrines and dogmas, is altogether incorrect. In reality, Mohammedanism is nothing but a rationalistic type of Christianity in the form of a most unfortunato state religioa. The times are passed when sculding about the Moslem creed as the production of the devil will satisfy, and tho struggle against Islam on these premises is a failure. Practically all of the mission literature that in the sixteenth, seventeenth, and eighteenth centuries was written against Mohammedanism is uscless. Indeed, its danger is now of an over-estimation of that creed; and some of our orientalists have begun to place Mohammedanism above Christianity. It should be remembered bowever, that the introduction of the study of Arabic into European universities was owing originally to the zeal for mission work among the Moslems. This is especially true of Bologna, Paris, and Oxford. We ourselves believe that the old saving is substantially correct, that "The best thing in the world is to be a Christian; the next best is to be a Mohammedan." For it is certain that Mohammedanism is infinitely superior to any form of heathenism and superior also to Buddhism, and without a doubt is nearer to Christianity than Rabbinic Indaism, calling Jesus even the ruch alla, or the "Soul of God,

Whether it will be possible to win the Moslem world for Christianity is a great question, but a beginning is being made, especially in China, where there are fifteen nillion adherents of this creed, and where the government does not antagenize Christian work among them and favors the Moslems in many ways.— Translations made for The LITERANY DIOSAL.

### ARE THE BIBLE HEROES BASED UPON ASTRAL MYTHS?

FREETHINKERS have long maintained that the existence of many of the leading characters of the Bible is open to doubt. It is somewhat startling, however, to find this point of view championed by one of the leading English Biblical schol-

PROF. T. K. CHEYNE.

Cheyne, caaon of Rochester and Oriel professor of Scripture at Oxford University, who takes the view that Abraham, Isaac, Jacob, Joseph, Saul, David, Jonathan, and many others of the leading characters of the Old Testament are purely legendary and were evolved from astral myths. This theory is worked out at some length in "Geschichte Israels," a recently published work on Old-Testament criticism

by Hugo Winckler,

ars. Prof. T. K.

the German Assyriologist and historian, than whom, dechares Professor Cheyne, "no scholar has more fully realized the problems before us and contributed on a larger scale to their solution." The English professor contributes to The Nonetenth Century and After [January) an article in which he attempts to clinicidate Winckler's reasoning and conclusions, and in which he suggests that "the Bablyolain amp of the starry leaven is the most trustworthy guide through the intricate paths of mythology and legead" in the Old Testament. The mythology of the Jewish people, he contends, was largely borrowed from the astral lore of Babylonia and Egypt, aad, when the historical tradition was defective, "the earliest wise men at once looked to the sky." He continues:

"Abraham, Isaac, and Jacob, then, are lunar heroes. In the case of Abraham this is, according to Winckler, doubly certain. His father Terah comes from Ur in Chaldea, the city of the South Balyboina Moon worship (Nannar), but, in order to reach Canaun, he must halt at Harran, which is the second great center of lunar worship in the region of the Euphratean civilization.

. And how comes Sarah to be at onco Abraham's sister and his wife? Because Sarah, being the counterpart of Istar, has a double rôle. She is the daughter of the Moon-god, and therefore Abraham's sister; she is the wife of Tammuz, and therefore Abraham's wife. For Abraham, too, according to Winckler, has a double rôle; he is the son of the Moon-god, but he is also the heroic reflection of Tammuz. Of Isanc little is recorded: he dwells at Beersheba, 'the well of the Seven-god,' that is, the Moon-vod. Incob. however, is much more definitely described. His father-in-law, Laban, reminds us by his very name of Lebena, the moon, and Labau's two daughters. Leah and Rachel. represent respectively the new moon and the full moon. Dinali, Leah's daughter, represents 1star, the daughter of the Moongod, and with her six brothers makes up the number of the days of the week, one of which in fact (Dies Veneris, Friday) has a female deity.

Even more marked, says Professor Cheyne, is the nstral significance of Joseph's life and tho stories associated with it. The key to his character, we are told, lies in Gen. xxxvii, to, where he dreams that the sun, the moon, and the eleven stars did homage to him. Professor Cheyae says further.

"In the original story it was the Moon-god (Jacob), with his children, who lowed down before the Snn-god (Joseph), his son, The rest of the story of Joseph now becomes clear. The lunar heroes, Abraham and Jacob, fetched their spouses from the land of Moon-worship; the solar hero Joseph goes to Egypt, the land of Sun-worship, to obtain for his wife the daughter of a priest of Heliopolis. But, like Abraham, Joseph also represents Tammuz, the sun of spring-tide, who dies and passes into the underworld, whither Istar descends to bring him back to earth. This is why he is cast into the pit, and again raised out of it. Hence another reason for Joseph's going to Egypt, for Egypt represents the southern region of the sky, in which the sua staads in the winter when Tammuz is dead. That the tribes of Israel (uccessarily twelve, because of the signs of the Zodiac), together with their ancestors, are connected with an astral myth is not a new idea, but it has been worked out by Stucken and Winckler with greater fulness of knowledge than by any previous writer. It is, of course, not stated that the early legends are historically worthless; wisely used, even the early legends can be made to furnish historical material, both directly and indirectly.

Wiackler treats almost all the Old-Testament heroes in this same fashion. Sauli is a "Monaegud." David is a "solar hero," and his red hair "is the image of the rays of the sun." The gignat Goliath "corresponds to the wild hunter and tyrant Orion, the rising and setting of which coincides with the winter and summer substices." Solomon, too, is represented as the impersonation of the planetary gol Hermes or Mercury, who was regarded as the source of wisdom. That many of these "interesting and revolutionary details" may appear far-fetched and incredible to conservative critics, Professor Cheyne readily admits, but, he adds: "Winciked deserve credit for not being to fastidious, and venturing to publish many things which may perhaps only be serviceable as working hypotheses," He concluded:

"Almost all that can be attained by the old methods of critisem—bulk as regards the contents of the Old Testament—has been accomplished, and how imperfect this is no candid critic perhaps will deny. Would it not better to put asside prejudice, and suppose that we have indeed arrived at a turning-point, and that the Old-Testaments udy is

indeed in course of being transformed to a great extent (the qualification is deliberate) into a branch of the study of Semitic antiquity? There will still be subjects apart from this wide study which require special consideration. But at present all the subjects which have till lately been supposed to be fairly settled—in ext, lexicon, grammar, exegesis, history—need to be investigated from a virtually new point of view. It will continue to be an advantage to know the old as well as the new methods by special training, at least provided that this training is no longer permitted to issue in the self-confidence and unintelligent designations are supposed to the contractive of some of the second method and contractive of some of the second method reference of the contractive of some of the second method reference of the contractive of some of the second method method reference.

### A JEWISH CRITICISM OF THE ETHICAL CULTURE MOVEMENT.

THE progress of the Ethical Culture Society in this country has been followed with considerable interest ever since its foundation in New York, now nearly a quarter of a century ago, but the Estimates.

by Dr. Felix Adler. In New York, at least, the movement has met with some success for Ad. ler's vast audiences in Carnegie Hall are certainly much larger than the average church congregation, and many ontside activities have been inaugurated under the auspices of the society. In the country at large. however, the movement seems to be lacking in vitality. and Dr. Adler's recent visit to the West draws from The Reform Advo-

PROF. FELIX ADLER.

rate (Chicago) a rather severe criticism of the whole movement.

"People may go to hear a man," remarks the writer, Mr. Tobias
Schanfarber, in a signed editorial, "and speak of the sublimity
of his thought and the deep sincerity of his soul and all that sort
of thing, but when it comes to putting into effect his preaching,
they are not there." He continues:

"The men whe compose the Ethical Culture Society are no better than any other men. Their own leader has told them so, Many of them joined this society because it was something new. The novel always attracts. Then the personality of their leader is of a kind to hold them. He has at least held the Jews who came to him in the start. We have been credibly informed, however, that the non-lews he has not been able to hold. When a quarter of a century ago the movement was organized in New York there were just as many non-Jews as Jews affiliated with it. To-day that proportion is not maintained. We are told that the proportion is as ten to one. What the cause of this fallingoff of non-lews is to be attributed to is difficult to tell, unless it be that the non-lews do not even want to affiliate with the lews in a movement of this character. The Jew who wants to get rid of his Judaism by joining an organization of this kind finds himself deserted by the non-Jew, simply because the latter does not care to have anything to de with bim. Professor Adler may speak of his movement as the church of the uncharched, but he will find that to a very great extent it is the church of the unsynagogued Jew, at least in New York."

Mr. Schanfarber comments on the isolation of Professor Adler in the work he has undertaken. "It has frequently been said," he observes, "that the movement would not outlive its founder; that with his passing away (may it be long in coming), the society would pass away, and we believe it will." He says further

"One thing seems strange, and it is this, that in the twenty-five years of the existence of the Ethical Culture Society, not one Jew has assumed the leadership of one of these societies. Processor Adler is the only Jew at the head of one of these organizations. We do not believe that this is because no Jew has ever desired to become identified as a leader of the movement. We are of the opinion that not a few of the teachers in Israel have oppled with the Ethical Culture movement, but to no purpose. It seems that the founder of the society, for some reason or other than the control of the society, which is the seems that the founder of the society, for some reason or other control of the society of the seems that the founder of the society, for some reason or other than the seems of the s

"In the five or six other cities outside of New York in which ethical outlure societies have been organized they are led by non-Jews. Perhips this is the reason too that so few Jews have uffiliated with the movement in these other cities. We believe that if Professor Adler were to leave the New York society and become the leader of an ethical society in another city, his following among the Jews would be just as large proportionately as it is in New York, while if one of the other non-jewish leaders were to assume the leadership of the movement in New York, instead a large influx or non-jews into the society. It show flow and evidence of the Jews and the non-Jews seeking their own. If

The writer concludes

"It is all well and good in theory to speak of a grand confederation of the human kind under one standard, but our speaking of it by no means signifies that in reality that day is upon us. We have some broad liberals among us, who would wipe out all differences and gloss over all distinctions and tear out the blank leaf between the Old and New Testament, and in this way hope to bring about this confederation of all religious so ardently hoped fer. They would decorate our altars with the shield, the erescent, and the cross; they would adorn our temples with basis of Moses, Isaiah, Jesus, Mohammed, Confucius, Buddha, Zoroaster, and the rest; they would bring the various bibles of the world, the Oid and the New Testament, the Koran, the Tripitaka, the Zend Avesta, and the Book of the Kings; these they would bring into our temples and have them read there. These and other broad and liberal things they would do in the hope that it might result in the bringing together of all religions into one grand confederation; that they might be hailed as the glorious leaders in the movement. These so-cailed saviors of Judaism and humanity would give up what is distinctive to Judaism. just so us to cover themselves with distinction. But the world is not ready for such a confederation nor is such a confederation. for the present, desirable. . . . No Jew need to go to the Ethical Culture movement for new ethical or religious upliftment. Professor Adler has said it himself, the prophets in Israel have risen to the highest heights of ethical thought. To them he must go for his inspiration. To them we will continue to go."

A Church of Agnostics.—There exists in Kansas City a "Church of This World" organized by Dr. J. E. Roberts, a former minister of the Unitarian Church, about five years ago. It is believed to be the only organized church composed exclisively of agnostics in the world. During the past flow weeks plans have been perfected by the trustees of this church which have for their object a world-crusade on behalf of agnosticism, with Dr. Roberts as the leader. Says The Philosopher (Kansas City, February), the official organ of the church:

"It is the intention of the board of trustees to send Dr. Roberts to every part of the United States to deliver lectures and to organize churches, all of which shall be under the jurisdiction and control of the Kansac City church. An assistant to Dr. Roberts will be appointed within a few days, who will occupy the pulpit here when Dr. Roberts is away lecturing. The assistance of the control of

ant will be paid a high salary, and there are several candidates for the appointment.

"It the plans of the members of the Church of This World are successful, Dr. Roberts will be the successor of Robert Ingraol as the leader of agnostics. Ingersoll had no organization behind him, but Dr. Roberts will have a flourishing church bere, almost an unlimited amount of money to spend, and full power to organize churches anywhere in the United States.

"There are two wealthy men now in Kansas City who have come from distant cities to offer their financial support to the movement to make Kansas City the center of agnositism for the world. They have been conferring with the trustees of Dr. Roberts's church for several days, and will remain in the city until the plans that have been agreed upon have been formally lannched."

Two independent congregations organized on lines somewhat similar to those of "The Church of This World" already exist in New York City, and are presided over by Mr. Hugh O. Pentecost and Mr. Henry Frank.

### THE PSYCHOLOGY OF RELIGIOUS "CONVERSION."

GOME years ago the Rev. E. M. Stephenson, of Chicago, legan to ask certain persons, mostly farmers and mechanics, "When were you converted?" After receiving a thousand replies, he tabulated the results. He found that five per cent of the respondents were "converted" before nine years of age; seven per cent. from nine to twelve inclusive; fourteea per cent. from thirteen to fifteen; fifty per cent. from sixteen to eighteen; sixteen per cent. from nine too twenty-ine seven per cent. from twenty-one to twenty-five, sixteen per cent. from the sixteen of the sixteen per cent. from the service of the sixteen per cent. from the sixteen per c

"Leaving out of account New-Testament usage, we may say that in the every-day speech of the people conversion means one or more of three things, namely; first, returning to God after a vicious, rebellious, or deliberately neglectful life; second, a personal desire on the part of a child or youth upon reaching religious self-consciousness; third, certain entotional and impulsive experiences which frequently accompany conversion in the entity, would not give the name conversion to anything short of the third of these meanings, while others would apply it to the first and third, and still others to all three."

In the article under review, Professor Coe confines himself almost entirely to the second category of conversions mentioned, and emphasizes the preponderance of conversions between the ages of sixteen to eighteen—a fact strikingly brought out in Dr. Stephenson's figures and also in harmony with Professor Coe's own investigations. This fact would seem to clearly indicate, the thinks, that "the years in which a boy is becoming a man bring forth great changes in this whole inner life, and that these mental changes have a close relation to religion." He continues:

"The dependence of childhood is now giving place to the independence of manhood not only in the youth's relations to purental authority, but also in his doctrinal beliefs, in his moral judgments, and in all that concerns his personal relations to God and to destiny. The child is taking possession of himself, for the first time his conscious inclividuality becomes complete, his life has more inwardness. At the same time, the social sense comes think about him. He forms cliques to "ganga". A capacity for love of the opposite sex is born, and with it a world of fresh susceptibilities! Under favorable circumstances the whole ideal side of the nature opens out. Intellectual hunger, appreciation of the beautiful, moral ideals and aspiratious, longing for perfect companionship—all these are likely to come.

"This is the supreme opportunity for pressing the claims of personal religion. It seems as if the whole personality personal religion, It seems as if the whole personality religion, It seems and it leads things in order that, at the outset of independent existence, the individual may realise that the only home of the soul is God. Conversions are rare before adolescence, because a normal child has no such capacity for personal religion; they are area after adolescence because the character has generally received its 'set' by the age of twenty or twenty-five, and because one's occupations and family carse engross one's attention.

A personal religious life, Professor Coe goes on to say, is something that no normal child possesses much before the age of twelve. Up to this time the child's personality has not emerged clearly from the general life of the family and the community. The writer declares:

"His lody assumed a separate existence at birth, but his mind is still to come to birth of definite selfhood. He may be truly religious long before the age of twelve, but until selfhood is thus born, his religion is less his very own than a wholesome compliance with the expectations of others. Thus it comes about that even the best-nuttruch child needs to pass through a process identical, in one respect, with the conversion of the most hardened sinner. We may call this the child's decision, or, since much or little deliberation may be involved, we may, still better, call it the personalising of his religion. The end toward which religions the converse of the con

Professor Coe expresses the belief that a scientific knowledge of religious psychology will accomplish far more on behalf of the cause of true religion than will a recourse to the "emotional appeal and social contagion" of the religious revival. "A sound objection to under revivalism," he says, "is that it confuses the essential and the accidental. It urges some persons to seek for inner experiences which their mental make-up renders impossible," It econcludes:

"We may sum up what has been said by a brief enumeration of the main contributions of psychology to not knowledge of conversion. First, it has given us relatively definite statistical information as to the proportions in which conversions occur as certain ages. Second, it has shown, from the nature of mental development, why conversions occur most frequently at certain specific periods. Third, it has analyzed various types of conversion, compared them with religious development that is unbroken from childhood to maturity, and shown the common element in king phenomena which have often, if not generally, seemed to the persons who experience them to be inexplicable or miraculous. Thereby it has belied to separate the essential from the Incidental, Finally, the fittle of this is entirely new, all of it has been taken out of the region of genessoric and placed upon a solid fold—improvement in revival methods and minication of the evangelistic and the tenching function of the church."

### FOREIGN TOPICS.

### THE IMMEDIATE IRISH CRIEVANCE.

A LL Ireland seems at this moment a practical unit on one burning question—"the Dillon rent." In an article on "Disturbed Ireland" in The News Liberal Review, T. W. Russell, M.P., who does "not think what is called Hous Rule, in the Irish sense, to be possible," gives this information:

"The convested districts board was formed. It has done, and is doing, a great work. But in view of the shocking state of the people its procedure is so slow as to imperil the whole enterprise. That portion of the work which has produced the best results and attracted most attention is the enlargement of the small holdings of the cottier class and their subsequent sale under the Purchase Acts. . . , Having made sure of the ground, the board last year tackled a bigger enterprise. It bought Lord Dillon's estate in County Mayo for something over a quarter of a million pounds sterling. Upon this buge estate there were some 4,000 of these small holders. It has, in the past, been a perfect hotbed of trouble. The poverty of the people has always elicited the pity of the charitable. Under this great act of the board these small occupiers have become occupying owners. Lord Dillon's exit from Mayo means much for them. Laudlord, agent, bailiff, have all disappeared. The rent office is closed. All the terrors of landlordism have gone."

"But notwithstanding these facts the transfer of this estate from owner to occupier has produced trouble of the gravest character," because it "set up an object-lesson for the whole of the Irish tenautry":

"The tenants on five or six of the estates adjoining that of Lord Dillon have struck for what they call 'the Dillon rent.' Of course the payment now made by the Dillon tenants is not a payment of rent. Nor is the reduction in the amount a reduction in rent. These men are paying a terminable annuity to the state, and this is a wholly different thing from paying rent to Lord Dillon.'

The people of the North and South differ strongly upon the question of Irish government, but are absolutely agreed upon the question of Irish laudlordism, according to this observer, Yene one derives the impression from a perusal of such articles as "The Policy of Compulsory Purchase of the Irish Land" by Judge William O'Connor Morris, in The Fortnightly Review (London), that the vested interests of Ireland will resist:

"It is irrational and unfair to separate a great body of men into a class of fat sheep in one pen and lean goats in another, without even a semblance of right; the Ulster tenant, therefore, the shardly treated, insists that he must be raised to the same level as his pampered fellow; this can only be effected by the general expropriation of the Irais landed gentry, and the general conversion of their dependents into owners by force; and no one can deny the strength of the argument. But because an one can deny the strength of the argument, but because an integer of land tenure his neighbor has got on the other side, it does not follow that, having regard to the interests of the sate, and of the untion as a whole, "compulsory purchase" would be a safe or a vise policy."

Judge Morris then argues that the "configuration of Ireland," the distribution of the population, and the system of "voluntary purchase," which the ludge thinks "falsely so named," condemn the proposition. But the Nationalist Irish press warmly indorses John Redmond in his position on this question, thus stated in Parliament:

"We humbly represent to your Majesty that the refusal of your Majesty's Government to hold out any hope to the popule of Ireland of a settlement of the first hand question by a comprehensive measure of compulsory sale of the landburd's interest to the occupying tenants, and by the reorganization of the congested districts board with larger resources and with compulsory powers of acquiring land, has given rise to widespread discontent and agritation in Ireland; that the Government of Ireland, instead of

applying itself to the removal of the grievances under which the people suffer and so abating the causes of reasonable discontinuous peoples under and so along the causes of reasonable discontinuous when Ireland is absolutely free from agratian crime, put the Cecroin Act once more in operation, suppressed the right of free speech, dispersel legal and peaceable meetings with unprovided and brital police violence, and used Cocroin courts presided over by magistrates removable at the pleasure of the executive to send to jail without fair trial members of this House and other citizens of Ireland for no other orfense than asserting their right to address their constituents and fellow citizens in public meeting assembled."

In indocsing this, The Freeman's Journal (Oublin) says:
"The facts of the present situation in Ireland are utterly Inconsistent with the hypocritical pretense that the government of
Ireland is either free or representative." It speaks of "this prostitution of the form of justice" in connection with the arrest and
imprisonment of Irish members of Parliament. From the opposite point of view The Pairly Experts (Dublin) deplores "the
ilangerous influences of the United Irish League" which "accomplishes its work by boycottla and intimidation."

### THE FRENCH PRESIDENT'S VISIT TO THE CZAR.

S OME curious observations are made throughout Europe regarding the announced visit of President Loubet to the Czar of Russia. Says The Speaker (London):

"The most interesting piece of political news in connection with the French elections is the postponement of the President's

journey to Russia till the summer. There is no doubt that the cabinet desired this visit to take place before the electors met. It was more dignified and more reasonable that M. Lonbet should appear in St. Petersburg with a national mandate behind him, IIad he gone in the latter part of March he would have seemed the envoy of a comparatively small clique, and would have stood for the accident of majorities in a worn-out parliament. change is ascribed

firmness.

PRESIDENT LOUBET, OF FRANCE

by the news agencies to the Czar. We believe it to have been due to M. Loubet's own

The items of information telegraphed "out of Russia" in connection with the trip are very odd, according to the *Hamburger* Nachriblem. It is not necessary to wait for news from St. Petersburg to find out that the Caar does not want President Louis bet just now. Prench papers seem to appreciate this view of the case. Says the Soleil, organ of the monarchical Orleanist natty.

"Voters, peasants, patriotic workingmen! You must reply to the ophisits who tell you the Russian rule; it he aliy of the republic: "That is a lie!" Nicholas II, has formed an allinace with Prance only. If a certain cooleses has recently arsen between the two allied Powers, the reason is to be sought less in differences of opinion on Oriental questions than in the senseless policy which diminishes the military strength of the mother country upon the plea of safeguarding it. The Cara sees, judges, reflexes, in accordance with the sympathy he feels for us. He is a politician, an ally whose security is losing value. He asks himself if it would not be to the interest of his people to seek elsewhere a companion in arms who is less readily weakened."

President Loubet had his visit postponed, says the same paper, in order to "play a game " upon the present French cabinet. The Temps and the Gaulois agree that all surmises regarding the visit are idle, since the only reasonably certain thing about it is that it will take place after the elections. But the Echo de Paris insists that the Waldock-Rousseau ministry would have preferred the visit to take place before the elections. A still more eurious observation is that of the Indépendance Belve Benecates

"William II. wanted to be present at the Russian maneuvers, but the cabinet in Paris called the attention of the cabinet in St. Petersburg to the fact that if the Kaiser were present at the maneuvers, President Loubet's visit would lose all political significance. Finally, matters were arranged. M. Loubet will go to Russia toward the middle of June and William II, will attend the spring maneuvers of the Russian army in Poland, near Warsaw, so that the visit of the Kaiser to the Czar will antedate by at least two months the visit of M. Lonbet. If this information be accurate, it has a twofold political interest. It shows, first, that France will not consent to the presence of a third party at the interviews of M. Loubet and the Czar, and that the Franco-German conciliation, which is indisputable, has not yet the political significance that certain parties wish to give it. It shows, finally, that William II, has decidedly set his heart upon effacing the bad impression produced in Russia by Count von Bülow's tariff bill. . . . As for M. Lonbet's visit, notwithstanding what we are told of the disposition of the Russian court, it will be of the nature of a public demonstration that can not fail to further strengthen the alliance of the two great nations."- Translations made for THE LITERARY DIGEST.

### REVOLUTION OR REFORM IN BELGIUM.

THE Socialist press in Brussels, headed by the Peuble, demands absolute manhood suffrage, as against a suffrage which tolerates plural voting. The Liberal press, represented by the Independance Belge, does not commit itself, while the Clerical press remains firmly conservative. The Paris Temps SHYS:

"Belgium is preparing for a constitutional struggle which may

assume a dangerous character. . . . The partizans of universal suffrage are quite resolved to do everything necessary to make the representative system genuine and to destroy the arbitrary basis of the artificial predominance of the Clericals. They have not forgotten the measures necessary to be taken in 1899 to get the best of M. Vandenpeerelsoom. On one side there was a struggle to the death in the chamber, parliamentary deadlock . without let up or regard for anything, and on the other there were street agitation, popular meetings in public places, and disorder that was preliminary to something more serious. The Socialists, while possessed of the law-abiding justinet and not at all desirous of losing their heritage, are not afraid of this revolutionary method and they do not shrink from any method of threat or intimidation. Many radicals assert that there is no excuse for failure in an undertaking of this sort . . . All this readiness to resort to force is calculated to chill the friends of peace. The ministry hopes not to be obliged itself to employ force except in extremity. The premier has what he thinks is a trump card up his sleeve. It is female suffrage. The Socialists have it on their program. It would be difficult for them to decline this dangerous gift if the Clericals offered it. Now, it is asserted that the wholesale cutry of the women into the political arena would assure the clergy at least half a century of absolute sway in Belgium."

A different solution of the problem is suggested to the Frankfurter Zeitung by the position of King Leopold:

Leonold II, has not the slightest interest in identifying the Clerical cause with his own, and he is far too clever not to know that if the path of violence be once trod, no one has so much to lose as himself and that nothing less than his crown is at stake." -Translation made for THE LITERARY DIGEST.

### PROCEDURE AND REPRESENTATION IN THE COMMONS.

HE new rules of parliamentary procedure introduced by Mr. Balfour, and the over-representation of Ireland are topics of the hour in London papers. Of the new rules of procedure. Lloyd's Weekly Newspaper says;

"Mr. Balfour's proposed new rules for the conduct of public business in the House of Commons have met with a very fair reception. There are points, of course, that will be changed in the course of debate, but in the main the new regulations are likely to become law. The real working hours are to be in the

freshest part of the day. Meeting from Monday to Friday at two o'clock, Government business will commence at half-past two, and will continue till a quarter-past seven. It is not until that time is reached that questions

"PIED PU'ER OF HAMELIN." Weekblad twor Nederland (Amsterdam)

MR. BULL: " Here, hang it all, I'm not like that! There must be something wrong with those glasses of yours!" Punch (London). will come on. At eight o'clock the dinner-bell is to ring, any remaining questions being postponed till midnight. Work will be resumed after dinner at nine, Tuesdays and Wednesdays being given up to the private members; that is to say, until

Easter, when the Government will appropriate Tuesday evening, taking Wednexalay also after Whitsuntide. The short day's sitting is to be changed from Wednexslay to Frilay. This arrangement will upset a good many dinner parties, which have usually been fixed for the

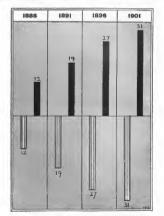

THE NEW DANCE

"For the maintennnce of order, methsody lawe been bortemed to!"

"Pauch (London).

countries. One of these will enable the speaker to put an end to unay seene by suspending the sitting for such a period as he thing proper. Offenders will have to endure much more severe penal-ties than of yoe, and it is proposed that they must, in addition to being excluded, write an apology to the Speaker before being readmitted to the House. This clause has already roused the Irish members, and no doubt will be firredly opposed. The weak pount in the government plan of reform is the absence of any suf-

showing the under-representation of england and wales and the over-representation of ibbland during  $e^{2i\phi}$ -topic kotiland has been justic erflexes that during  $e^{2i\phi}$ -topic kotiland has been justic erflexes. — The Fortnight Review (London.)

ficient system of devolution. Without this there will still be a clog in the legislative machine that will greatly hamper its

Comment in English circles is fairly summed up in the following from The St. James's Gazette (London):

"The spirit in which they are framed is worthy of the great traditions of the llouse, and worthy also of the courteous general man who is responsible for their introduction. The element of coercion is excluded as far an any be; the Government have garded the whole Ilouse as equally interested with themselves in maintaining its dignity and officiency."

As regards "the over-representation of Ireland," the London Spectator presents a scheme which seems typical of all the suggested changes.

"We may now draw up the following percentage table of the representation of each country, in which it will be understood that by 'ideal' representation we mean that which is exactly proportional to population".

	Pr	esen1	Pro	posed.	Ideal.					
England	6951	er cent.	74-0 P	er cent.						
Wales	4.5	4.6	4.1	4.0	4.1	**				
Ireland	15-3	14	10,8	14	3.01	**				
Scotland	84.6	45	10 8	44	so 8	44				

English press opinion favors a change in the basis of representation in the House of Commons. The newspapers in Ireland supporting John Redmond assert that cutting down Ireland's representation will not lessen the effective strength of her members of Parliamers.

#### THREATS TO END THE REICHSTAG

"IF the federated princes reach the conclusion that nothing can come from the present parliamentary foundation, that as a result of it not only the empire but the single states suffer, then it would not be unjustifiable to consider a totally new basis of popular representation.

In these terms the conservative Schlessche Zeitung broaches a topic that seems to be forcing itself upon public attention in Germany. This paper calls attention to the fact that the Reichstag is chosen by universal suffrage. "Do the members of the democratic party imagine that the Government will yield to the minority?" it asks, with reference to the tactics of the opponents of the tartif bill. The Vositiche Zeitung (Berlin) retorts spiritedity to this and other suggestions of "sharp means" thus:

"We remain quite cool at this playing with fire, altho the Schleticke Zeitung has already made up its mind as to what must be substituted for the right of imperial suffrage. There shall be delegates chosen by the several Landatags. This pran is alluring because each state in the empire would be adequately represented, while the political contests, becoming 'more and more American,' would be avoided. This makes one think of Munchausen again. Is in tot known in Bretlau that the tune of the uselesaness of American political contests, altho timely a few-wish of the substitution of th

In a more serious tone this authority turns to another phase of the subject:

"Consideration of 'sharp means' can be welcome only to those who seek to destroy confidence in the strength and endurance of the German empire. Whoeverrepresents the German princes as capable of establishing on their own authority \*a totally new basis of popular representation,' denies them official good faith and pronounces them disposed foreibly to violate and put aside a federal imperial government that was joyfully unified. The formal prince of the property of the constitution of the constitution can not be violated in one place and maintained in another. Not one of the federated states is obliged to remain in the imperial union if its foundation be illegally altered. Violation of the constitution would thus be a signal for a dissolution

of the empire. But, since the Reichstag rests upon the constitution, so, too, does the imperial throne. Whoever lays hands on one disturbs the other. Trenchantly did Rudolf von Bennigsen say: "The German emperor and the German Reichstag came into being on the same day." They will go down out the same day."

The discussion has been taken up by the press throughout Germany, the conservative and agrarian organs appearing to sympathies with those who antagonize the Reichstag, while the liberal and democratic papers talk of "secession" in the event of an attack upon the suffrage. All this prompts the Independence Delege (Brussels) to sny;

"The threat is at least amusing, and the conservatives must have reached an extrnoolinary state of exaperation, they must have n perfect consciousness of their political Impotence to bring forward such a project. . . The Emperor will think twice before supporting a plan which joopardizes the unity, even the very existence, of his empire."—Translations made for THE LYERAN IMPORT.

#### THE LATEST FEAT OF DE WET.

E UROPE is ringing with the name of Christian De Wet, the Boer general, whose recent escape from Kitcheuer's forces by slipping through their fingers, was so dramatic. Says the Independence Beige (Brussels):

"One stands dumbfounded at the magnificent proof of coolness, audacity, and energy that Christian De Wet has just given once more. This man is certainly the ablest tacticing that ever operated on a field of battle, and his great deeds supply history with materials for the most splendid portrnit of a soldier that poets could imagine. Camped with 2,000 men, convoys, and troops between Liebenberg-Ulei and the Vilge, he was tracked by 23 English columns that Kitchener sent in pursuit of him. He passed to the west of the Vilge and fell into a veritable forest of blockhouses, , . . The 23 English columns formed a circle which daily, hourly, closed in, fortified posts being established at every 150 yards. Impossible for De Wet to extricate himself. either on the north, on the south, on the east, or on the west. The Orange general dispersed his 2,000 men, retaining only a handful of brayes and a herd of cattle, and during the night he hnrled this band against the line between Kroonstad and Lindley. The line gave way at this formidable impact and De Wet escaped! Kitchener announces that 283 Boers were killed, wounded, or made prisoners in this affair. De Wet, consequently, saved 1,717 of his men-enough to form his command again, and continue his operations elsewhere. It is the most superb feat of arms of the whole campaign, and is calculated to impress the Boer population profoundly and to effectively discourage the British army. When it is remembered that, to attain this result. Kitchener had to mobilize 21 columns, to construct hundreds of small fortified positions, to make an effort greater than was necessary in clearing Cape Colony when invaded by the Boers, the question suggests itself how, after months and months of companigning, he still hopes to overcome the resistance of these peasants who accomplish prodigies every dny.

"De Wet is a born tactician," writes Arthur Lynch, the Boer colonel M.P., in the Kevne Blene (Paris). He adds:

"A peaceful merchant before the war, he might have led an absolutely obscure life had not circumstances brought to light his wonderful abilities as a soldier. De Wet is older than Botha. He is verging on fifty. Of medium size, he is vigorous, solid, hard, and dry like wood. His attitude, his gestures, his wery profile denote resistance. . . De Wet has the great quality which niso distinguishes Botha—that of never being discouraged. The men have sometimes lost hope. Thereupon the commenders have given them encouragement, and often men demoralized at night have fought like beroess in the morning."

The significance of De Wet's latest exploit is thus summed up in The Daily News (London):

"De Wet must have studied Homer, for on reading this ac-

in the Odyssey where Ulysses, the Greek antecedent of De Wet, escaped from the camp of the Cyclops mixed up with the sbeev We wonder whether De Wet also, after the manner of Ulysses, clung to one of his oxen as he broke through the line."—Translations made for The LITHARY DIGST.

#### EUROPE'S SURPRISE AT THE BRITISH-JAPANESE TREATY.

A STONISHMENT is the "note" of all European comment on the British-Japanese treaty, the London Daily News leading off in this wise:

"Our magnificent isolation has come to an end with a pretty sudden shock. Whether the treaty is indicative of anti-british coalition in the East, whether it marks the tearing up of the Anglo-German treaty, whether the visit of Prince Henry to America is the answer to the new naval alliance, are matters for speculation. We hope that the Government will lose no time in further elucidating a situation which is frought with the gravest consequences.

The comments of the Loudon Times are perfunctorily favorable, and include this observation:

"The gallanty, the efficiency, and the humanity displayed by the naval and military forces of Japan during the recent operations in Northern China justify the assurance that, abould the necessity ever arise, the King's soldiers and sailors will fail in their Japanese allies comrades with whom th y will be proud to first shoulder to shoulder."

"A momentous surprise," says the Vossische Zeitung (Berlin) of the treaty, adding:

"It is the first alliance ever concluded between a Western Power and a people of the yellow race, and it is no exaggeration to say that the agreement between England and Japan marks a new epoch in world history. . . . It is clear that England and Japan formed this compact against Russia.

After noting the astonishing nature of the news, the Frankfurter Zeitung says the treaty proves that England's efforts to "draw near to Russin" were a failure. The News Freis Preiss (Vienna) says:

"The greatest astonishment of all must have been felt in Peking, where the treaty can not fail to be regarded as a vet of the Russo-Chinese Manchuria agreement... In Washington on there seems to be satisfaction, for word comes theace that signing of the treaty was with the knowledge and approval of the United States."

French papers are so many echoes of these views, the Temps (Paris) calling the treaty "unprecedented."—Translations made for The Literary Digest.

#### POINTS OF VIEW.

PAINCE OF WALES IN HEILIN.—Hefore the Prince of Wales would undertake his recent trip to Berlin, according to the Indipendence Relge (Bernsele), everything connected with it was the subject of diplomatic negotiation, and the German Government agreed to take measures to render a hostile demonstration impossible. That such negotiations were necessary is very significant, adds be Beiglain newspaper.

MR. HAY AS GERMANY'S RUGHY.—Secretary of Nate John Hay is a enemy of Germany and a confirmed Anglemania, according to an article on "Germany and Public Opinion in the Chiled States" in the Provantive second Journalist, knows well how to grade public opinion into actification changed, a thing he loses no opportunity of doing. ### **Great Minds on Great Questions** "Modern Eloquence

The duties of Professional or Business life should not be permitted to dwarf the mind's interest in the world's thoughts and doing of the past and present. Vollations never gave up his study of Greek and Latin. A. T. to the profession of the past and present in the world's students and thinkers. Busy as they were, these men never ceased to keep in close touch with the world's great minds, for they appreciated the practical benefits to be derived from such intimacy.

Hon, Thomas B. Reed

NE of the most prominent features making "Modern Eloquence" a work without precedent or peer, is the wide field of modern thought, action and achievement, which it covers, both in subject and in manner of treatment. The great problems of the day, and

of the recent pass, are treated by master minds. "Modern Engagemen "places before the reader all sides of a question. It confines itself to no part of a problem, to no favorite view of life, men, or events. It is discoursive. As an instance, in one of the three volumes devoted to Great Lectures, we have Ruskin on "Work and the Higher Life," in which he lays down the distinctions between the rich and the poor, and the power down thousand the problems of the pr of life, men, or events.

"Work and the Higher Life," in which he lays down the distinctions between the rich and the poor, and the power held over those who are earning wealth by those who already possess it, and use it only to gain more. It is a same voitine we have Illia's becure on Ruskin, which he introduces a ready to the power of the transport of the latest power of the latest power

to type in most instances for the first time), enrich literature for the present generation, and for those to come.

These momentous questions and topics are not decided for the reader—all the facts, all the arguments, on all sides, are presented for

The second section of the second seco tions. The utterances of the platform are not only historic, but educative and inspiring, and intense with the genius of great things.

#### GREAT ADDRESSES

These three volumes are distinctivaly a selection of the masterpieces of those who contribute. No work ever published contains more that time will approve as worthy and classic In our literature. We have, with fine, broad view, the addresses made by our greatest men on occasions which called forth their greatest efforts. The range of topics is as wide as human interest. A Cardinal of the Catholic Church, with impartial liberality, speaks on "The Persecution of the Jews." outh is not only lauded by her own sons, but by the sons of men who a few years ago were at war with her. The manufacturer, the business man, the professional man, and the educator all discuss from a high plane of ethics and principle and vast experience, the questions of their callings

Here are Austin, Bancroft, Blaine, Hay, Hillis, Irving, Longfellow, McKinley, Rooseveit, Olney, Mabie, Webster, and Watterson and others, each one a host in himself.

### Anecdote, Reminiscence,

Repartee This tenth volume stands alone and superb among the compiled from exclusive sources to which only in the positions of the Editor-in-Chief and his associates could have access. Here are fine stories for the clergyman, statesman, diplomat, banker, business man, physician — In fact for men in all callings and In every walk in life. There is also an

Analytical, Subject, end Concordance Index, so that it is possible to refer instantly to any speaker, topic,

time or place.

### AFTER-DINNER SPEECHES

In the preparation of these three volumes more than three thousand Alter-dinner Speeches were examined, and only the best admitted. Those that are included represent a final siling—"the survival of the fittent."—in the contest of wit, common-sense, and power to entertails. As units, they reprisent, also, most diverse interests and points of view, while collectively they stand for the modern and cosmopolitam world of

### Life and Death.

Hy ERNEST CROSBY.

So he dienfor his faith. That is fine-More than most of us do. But say, can you add to that line

That he lived for it too? In his death he bore witness at fast As a marter to truth

Did his life do the same in the past From the days of his youth?

It is easy to die. Men have died For a wish or a whim -From bravado or passion or pride. Was it harder for him?

But to live every day to live out All the truth that he dream, While his friends met his conduct with doubt

And the world with contampt, Was it thus that he plodded ahead,

Never turning aside? Then we'll talk of the life that he led.

Never mind how he died.

"Silent, upon a peak in Darien "-Four hundred years being fled, a Greater stood On that same height; and did behuld the flood Of blue waves leaping; Mother of all men! Wise Nature! And she spake, "The gift I gave

To Nofice da Balboa could not keep Spain from her sine; now must the ages sween To larger legend, the her own was brave Here on this ridge I do foresee fresh birth.

That which departed shall bring side by side. The sea shall sever what hills did divide : Shall link in love." And there was joy on earth; Whilst England and Columbia, quitting fear,

Kinsed-and let in the eager waters there. - In The London Telegraph,

#### PERSONALS.

Aguinaldo's One Wish,-Among the many courtexies which Aguinalda received while he was a captive in Manila was a visit which General MacArthur paid the Filipino leader to find if he was being rightly treated. The Saturday Evening Post (Philadelphia) tells the story as follows:

At the cluse of the visit the General asked Agninaldu if there was anything he would like to have, whether papers, magazines, cluthes, cigars, or other articles. But the prisoner shook his head. He said that there was nothing at all that be wanted. Just as the general was about in close the door

Aguinaldn's face suddenly brightened, and the look in his eyes showed that he was trying to remember some name. "What is it?" said General MacArthur.

"There is just one thing in the world I want," said Agnisaido, "il ynu can mly get it for me. I have had it but once in my life and that was at Hungkong. They said it was an American thing, and that all Americans had it. It is—ice-cream!" he said with great enthusiasm.

Mr. Browning as a Literary Adviser.-Mrs. Katherine de Kay Bronson, writing in The Cornhill Magazine (Pebruary), gives some reminiscences of Brawning in Venice. She tells the following story showing the poet in the rôle of literary adviser :

It was evident to me that he always strove to excuse the faults of others and overlook their

# Fire Extinouisher 44 Part out a small blass and you mon't have a his one

You may never have had a fire, but look out, your turn may come to-night. Are you ready for it? How would you put it out? If you wait for the Fire Department the delay may be disastrous. The "PATROL" will put out any fire if taken in hand promptly.

#### A child can use it effectively Turn it upside down and it starts

You don't have to pump or throw anything-simply direct the stream which flows instantly, carrying 50 feet, and which is impregnated with a simple chemical giving it 40 times the effectiveness of ordinary water. It makes short work of fires upon which plain water has practically no effect, such as oil, naphtha, benzine, tar, varnish and similar inflammables. Always ready. Lasts forever. Costs \$15.

#### SEND FOR OUR HANDSOME BOOK, FREE

which gives feel particulars, guarantee, etc. THE "PATROL." Is handsomely designed in copper, in small in size but all powerfiel in work. Contains a simple chemical in solution and you can reclarge it if no smutter any amount of times for a less pennies. An onesse of prevention is better than a power of cere Money Dack if deglired after; dary. trial. Fire departments use our extinguishers sixtyely with wonderful results. Write Orli Book is once—one day's delay may cove by no thoroust of dollars. Arbications for additional apencies will be considered.

young man accosted him, saving: "Your face is familiar. Where in hell have I seen you?"

"I really don't know," said the Archbishop, blandly. "What part of hell do you come from?" —Philadelphia Times.

#### Fish Stories in the Babyionian Talmud.

The Talmud of the Hebrews is a depository in which one would seek for many things before looking for hone finds and chronicles of the immemorial sea-serpent; yet there are some specimens therein which would put the veriest son of the sea to ahame and show that theeafly rabbis were not devoid of a keen sense of humor. The following are from the latest section of the English translation by Rabbis Rodkinson:

"Rabba b. Hana said again: "I have seen an ailigator as large as the city of Hagrunia, which contained sixty houses. A snake came and swallowed it, and a large-tailed raver came and ewallowed the snake, and then she reven sat on a real."

#### The translation of another is as follows:

"Rabba said again: 'At one time when on board of a hip I awa a fish into twong gills a reptile crept from which it ided, the sea throwing it out on hand. And sairty arrest were destroyed by its fall, and sixty attrest consumed its fish, and sairty other stress saired the fish, that was left; and from one eye they filled three hundred meaures of oil; and when I returned tither after twelve months, I saw its bones being sawed to restore the stress that were destroyed by it?"

Were the speaker other than Rabba b. Hana, who would have believed this?

"He said again: 'At one time I was on board of a ship, which was driven between two fins of a fab; three days and three nights the fish was awimming against the wind and we were sailing with the wind. . . And R. Ashi said that this was one of the smallest fishes of the sea which has two fins!"

From the same lnexhaustible source we have the following also:

"It once happened that I was going on a boat, and saw a fish on which and was gathered and grass grown thereupon. And we thought it was an island, descended, baked, and cooked upon it. When the back of the fish grew hot, it turned over, and had the ship not been so near we would have been drowned."

It is scarcely to be wondered at that at the close of one of these marvelons rabblinical tales we should find this remark recorded: "R. Papa b. Samuel said: 'If I had not been there, I should not have believed it!"

# An Orchestra On Easy Payments

Every reader of The Literary Digest can have a veritable orchestra in his own home on terms that will suit every purse.

It is an orchestra that will play for you whenever you want it, and as long as you want it. It never grows tired. It plays just the music you want, grave or gay, lively or quiet, quick or slow—just as the mood hits you.

This is exactly what the Stella Music Box is—an orchestra, and as sweet and as delightful an orchestra as ever played before an audience. The

# STELLA Music Box

is not an ordinary box. It should not be confounded with the boxes you have heard with past. It is the newest—the latest step in music box development. It is what the music box makers have been struggling to attain for half a century. It plays all the classic and popular music in a clear, sweet tone—a tone only heard on the Stella. This is the box. Here is our offer—

On the payment of \$7.50, we will send Box No. 150—one of the latest style with 12 tune sheets, direct to your home. You select the tunes—we do the rest.

The price of the box is \$75.00. The balance of the amount can be paid in nine monthly instalments.

#### You can secure the box NOW.

Write us at once and we will facilitate in delivery as much as possible. You can have the whole winter's enjoyment out of it while you are paying for it. Thousands of homes are without a music box because they don't know what the latest box—the Stella—is. They do not realize the delight it gives not only to the young and old who are lovers of music, but to those who are appealed to the latter class.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

#### For Singers and Speakers.

#### The New Remedy for Catarrh is Very Valuable.

A Grand Rapida gentleman who represents a promioent manufacturing concern and travels through central and southern Michigan, relates the following regarding the new catarrh cure. He says:

"After suffering from catarrh of the head, throat, and stomach for several years, I heard of Strart's Catarrh Tablets quite accidentally, and like everything else, I immediately bought a package and was decidedly surprised at the immediate relief it af forded me and still more to find a complete cure after several weeks' pse.

"I have a little son who sings in a boy's choir in one of our prominent churches, and he is greatly troubled with hoarseness and throat weakness, and on my return home from a trip I gave him a few of the tablets one Sunday morning when he had complained of hoarseness. He was delighted with their effect, removing all huskiness in a few minutes and making the voice clear and strong.

"As the tablets are very pleasant to the taste, I had no difficulty in persuading bim to use them regulariy.

'Our family physician told us they were an antiseptic preparation of undoubted merit and that he himself had no hesitation in using and recommendling Sinsar's Catarr's Tables's for any form of catarri.

"I have since me many public speakers and proconsistent singers who was the control of the contr ing Stuart's Catarrh Tablets for any form of catarrh.

# NEW BOOKS JUST READY

A Brilliant Satire on Militarism

# CAPTAIN JINKS, HERO

By ERNEST CROSBY

25 Clever Drawings by Dan Beard

Never before has every feature of militarism been treated to such keen wit and merciless sarcasm as in this satirical novel based on the military history of the United States since the outbreak of the Spanish War. Among the accompaniments and results of war exploited and satirized, are hazing at " East Point," the war whoops of the yellow journals, the savagery of war, the Schley-Sampson controversy, civilizing the heathen savage, pension abuses, the capture of Aguinaldo, the Peace Conference, army mismanagement, osculatory attacks by goosey girls, etc.

#### GET MAD

WHEN FRIENDS TELL THE TRUTH

Many people become coffee topers before they realize it, and would be angry if thus described even by a close friend.

It will pay anyone to examine carefully into whether on not coffee has gained the matery over them. Ar coffee toper may suspect that his op her alls come from coffee dinhing, but they will invariably charge the disease to some other cause, for right down in the heart they realize that it would be practically impossible to give up coffee, so they hope against hope that it does not hart them, but it goes on with its work just the same and the result is complete collapse and nervous prostration, lasting sometimes for years, muless the poison that causes the disease is disconniers that the content of th

There are hundreds of thousands of illustrations of the truth of this statement.

Any person addicted to coffee can make the change from common coffee to Postum Food Coffee without trouble provided the Postum is properly prepared so as to bring out the color, flavor and food value. It has a rich black-brown color and changes to the golden-brown when good cream is added.

The change will work wonders in any one whose nervous system or stomach has been unbalanced or disturbed by coffee.

## 6he Life of St. Paul Harmonized in Scripture Language

By REV. S. W. PRATT Author of " The Gospel and the Holy Spirit,"

THE attempt has been made in this volume to give the full text, in a harmonious chronological arrangement. of whatever pertains to Paul's life and work at any one time and place. The plan has been to construct, after the inductive method, a complete Scriptural life of St. Paul, following in general the record of Luke in the Acts, and presenting in addition thereto, and in chronological order, whatever the Apostle himself has written in his Epistles concerning the same facts and events, and whatever he has written about other parts of his life and work. . .

The appendix will be found instructive as showing St. Paul's personal relation to Christ and his claim to Apostieship, his personal appearance, his relation to his companions, and the unity of his teaching, and his personal life and faith,

that the paper shall stop at the end of the year. If instructions are
given to this effect, they will receive attention at the proper time.

#### TOPICS OF THE DAY.

#### FRIENDS AND FOES OF SHIP SUBSIDIES.

EXT Monday is the date set by the Senate for its vote on the Shipping Subsidy bill, and, as the Washington correspondent of the New York Journal of Commerce says, "if anything is to be done to hinder the passage of this measure, either in Senate or House, there is not a moment to lose." The minority in the Senate show no disposition to hinder it, and the minority in the House are powerless to hinder any program determined upon by the majority; so that many papers believe that this much-discussed measure will soon be a law. The bill provides for three kinds of subsidy-mail subsidy, tonnage subsidy, and fisheries subsidy. The Senate committee in charge of the bill reckons that the mail subsidy, under present conditions, will amount to about \$4,700,000 a year, half on the Atlantic and half on the Pacific; the tonnage subsidy to about \$1,072,095 a year, and the fisheries subsidy to about \$200,000. Any increases in American mail steamers, fishing-vessels, and other shipping entitled to subsidies will mean corresponding increases in these sums,

The Independent and Democratic papers are practically a unit against the measure, and not many of the Republican papers favor it very heartily. The Boston Herald (Ind.) does not believe that "such subsidies would increase materially the foreign trade of the country, or even prove of great advantage in building up the shipping of the country," while the New York Evenine Post (Ind.) considers such legislation improper and dangerous. The New York Times (Ind.) says that the "subsidy beggars" simply "want the money from the Treasury-that is, the money of the taxpayers-to swell their profits," and it declares that "this is the real purpose of the present bill, and all the talk of building up American shipbuilding or an American marine is for the deception of the people." The New York Journal of Commerce opposes the payment of money from the Treasury to any special interest. It says: "Not more than three or four per cent of British tonnage is subsidized; only two or three German lines are subsidized, and they do not come to this country. All the French shipping is subsidized, but there is no shipping from the competition of which we are in less danger." It also expresses a disbelief that the bill will accomplish what it aims to do. Similar objections are strongly urged by the New York Press (Rep.), the Philadelphia Times (Ind.), Ledger (Ind.

Rep.), and Record (Ind. Dem.), the Pittsburg Bispatch (Ind. Rep.), the Atlanta Journal (Dem.), the New Orleans Picpure (Dem.), the Louisville Courier-Journal (Dem.), the Detroit Tribune (Ind.), Free Press (Ind.), and Journal (Rep.), the Indianapolis News (Ind.) and Sentinel (Dem.), the Chicago Chronicle (Dem.), Inter Ocean (Rep.), and Tribune (Rep.), the St. Louis Republic (Bem.), the St. Paul Bispatch (Rep.), the Salt Lake Herald (Dem.), and the Baltimore Sun (Ind.) and American (Ind.).

On the other side the Denver Republican (Rep.) believes that it will be impossible to revive our shipping "without government aid of some kind," and the New York Mail and Express (Rep.)

"It would be of vast assistance in building up our foreignt trade in parts of the world where it is just beginning to open unlimited opportunities. It would give the needed stimulus to the building of first-class steam-vessels in our own shipyards and would incidentally furnish an auxiliary force for our growing navy, which may become of vast consequence to all the intervise of the country. These are certainly benefits that justify the provisions of the bill for mail subsidies."

Says the Seattle Post-Intelligencer (Rep.):

"By the passage of the proposed measure the general interests of the whole nation will be largely subserved. Not only will it result ultimately in the saving of the \$200,000,000 now paid annually to foreign ships, and the protection of our commerce from interruption in the event of a European war, but it will recreate a seagoing American element, from which we can draw men to defend the country on the seas in the event of war against the United States, besides furnishing the Government with an auxiliary fleet to strengthen the navy in such an event.

"Probably no measure which will be presented to Congress for action is of such large interest to the people of the whole Units States, certainly none is of such great local interest to the people of Washington, as the bill which, if passed, will result in recoing our ocean-carrying trade to American built ships manned by American seame and owned by American critisens."

Other papers that invor the bill are: the Boston Transcript (Rep.) and Journal (Rep.), the Brooklyn Times (Rep.), the Rochester Democrat and Chronicle (Rep.), the Philadelphia Inquirer (Rep.), the Pittsburg Times (Rep.) and Chronicle Telegraph (Ind.), the Salt Lake Tribune (Ind. Rep.), and the San Diego Chrion (Rep.).

Are we Violating the Treaty of Paris?-Spanish ship-owners in the Philippines, according to the Manila American, are in a puzzling dilemma. Under the United States navigation laws, which are now being put in force there, they must abandon the coastwise and inter-island trade. Many, if not most, of their craft are not adapted for the foreign trade, and, as one victim of the new ruling exclaimed: "The upshot will be that Spanish owners will have to tie up their vessels in the Pasig and let them rot." The Spaniards can solve the problem by becoming American citizens, which they decline to do, or by selling their ships to Americans, who do not want to buy. The Spaniards, according to The American, feel toward Spain as children feel toward a parent declining in health, and reverence the Spanish flag the more at a time when the mother country is going into decay. They are willing to sell, "but there is no market-they had been told that one of the benefits of the change of sovereignty would be an influx of capital, but it has not materialized,"

The Spanish ship-owners urge that their exclusion from the coastwise and inter-island trade is a violation of Article 1V, of the Treaty of Paris, which reads:

"The United States will, for ten years from the date of exchange of ratifications of the present treaty, admit Spanish ships and merchandise to ports of the Philippine Islands on the same terms as ships and merchandise of the United States."

The American says that when a representative of the Spanish Chamber of Commerce in Manila brought this to the attention of the Philippine commission on January 15, "he was briefly answered by Commissioner Wercester, who stated that the chapter bearing upon the coastwise trade was merely a modification of the rules new in operation in the islands; that they had been established by executive orders of the United States, and that it was not within the power of the commission to change them."

#### A NEW CANAL COMPLICATION.

A FEW days ago, just at a time when the Panama Canal route seemed to be nearer adoption by the United States than it ever had been before, the Colombian Government introduced a new complication that may, in the opinion of many newspapers, defeat the entire Panama project and decide the Senate in favor of the Nicaragua route. The isthmian canal commission, it will be recalled, had changed its recommendation from Nicaragua to Panama when the Panama company offered to sell out for \$4,000,000. Now Colombia comes forward and says that its censent must first be obtained—that is, as the papers in this country interpret it, the Colembian Government must also come in for a few millions. It seems to the New Work Commercial Advertiser that "this is an inconvenient, not to say dangerous, game to play," and adds:

"Celombia has abundant reason to congratulate herself upon the selection of the Panama route by the stiminal commission without interposing any obstacle to the accomplishment of the policy thereby indicated. That Government should remember that, in the present state of public opinion on the canal question, expert opinion and legislative opinion are jurily at cross purposes, and that even a technical blocking of the Panama transfer may give the advocates of Nicaragua their best chance.

"Past experience is very clear in showing that if an excessive price for the Pannam plant determined the choice against it, the prospect of delay by Colombia may do much to make Congress reconsider the whole matter and adopt the first report of the commission. The difference in advantage between the two routes is not so great that expert preference for Pannam will prevail against a further prolonged disappointment of American sentiment in flavor of a great public verk."

The St. Louis Republic urges a return to the Nicaragua route; while the Philadelphia Press recommends the passage of the Spooner amendment, giving the President the power to bargain fer either route. Says the Columbus Disputch:

"Colombia's warning te the Panama canal company that it is unof tree handed to sell the canal to the United State is situed as a statement of a fact of which the company should long ago have been aware. It is fully and explicitly set forth in the articlear co-concession, and it is surprising that the company should long ago have been aware. It is fully and explicitly set forth in the articlear proceeded thus far in its segotiations without having provide against a collapse of all plans. It is also remarkable that the Colombian floorwrament, anxious as it must be for the location of the causal at Panama, should have gone about this business of correcting the Panama company in this brusque way. Propense way, the matter should have been the subject of quiet and friendly megotiations, looking to a removal of all obstacles in the way of the sale, for their interests, while not identical, are in the same direction.

"In time it may all be cleared away, but before that is done Congress may have passed the Nicaragua bill and forever set-

tled the location of the canal. The House has passed the measure, and the Senate may similarly act. There is now just as much reason for a careful inquiry inte the Panama offer as there ever was, but Senators may grow restive under the appearance of a new obstacle and put the Nicaragua bill through.

"The intelligent thing, however, would be to pass the Spooner bill, which provides for the location of the cannal at Panama if a clear title to the property can be given by the company and ifs satisfactory terms can be secured from Colombia, and as a naivenative autherizes the President to proceed to construct the canal at Nicaragna. The Executive, with such power in his hands, could deal promptly and decisively with all parties and make the best possible bargain for the United States.

#### AMERICAN INTEREST IN SUGAR BOUNTIES.

DROSPERITY in Cuba, Porto Rico, the Danish West Indies, and all the other islands in that region, and in Hawaii, so the press predict, will result from the international agreement in Europe to abolish sugar bounties. It is suggested by the Copenhagen correspondent of the London Times that in view of the prospective prosperity in the Danish West Indies, Denmark may conclude to keep them; and it is suggested by the New York Press that in view of the good times coming in Cuba, Congress need not do anything for the island. The Press's suggestion is combated by the New York Journal of Commerce and other pro-Cuban papers, however, which point out that the bounties will not be abolished until September, 1903, while Cuba needs help now. As a result of the abolition of the bounties, "sugar is certain to fall, and the risk of disorder in Cuba during this period is thereby greatly increased," thinks the Philadelphia Press. and it argues that "no course is wise or prudent which does not guard against this and meet this prospect by reducing the duty on sugar and other Cuban products," The United States would not have "expanded" in 1808, the Chicago Tribune believes, if the bounties in Europe had not wrought ruin and disorder in Cuba. "It was the pressure of poverty quite as much as of Spanish misgovernment," it remarks, "that caused a revolt which led up to the acquisition of the Philippines by the United

Under the system that is new to be ended, the governments of Germany, Austria, France, Belgium, Helland, and Russia paid an export bounty on all the sugar shipped out of their respective countries. This stimulated the production of sugar enormously, and enabled the German sugar trust, for instance, to sell sugar in England at less than half the rate prevailing in Germany. Great Britain and the United States are the two greatest sugarconsuming countries on earth; in Great Britain the benefit of the bounty, it is noted, went to the consumer, in the United states the bounty went into our national Treasury. Our Treasury Department collects on all sugar imported a countervailing tariff equal to the bounty paid when it was exported, so that the bounty-paying governments named above virtually present to our Treasury the amounts paid in bounties en all the sugar we import from Europe. According to the despatches, England, touched by the appeals from her ruined sugar-producing islands in the West Indics, notified the continental governments that she intended to adopt the American plan of countervailing duties. In that case practically all the bounties would be virtually payments into the British and United States treasuries, a prospect that the continental countries did not relish. Hence the abolition. Incidentally, our newspapers observe, the immense candy and jam business in England will be affected, the sugarbeet growers in Europe and the German sugar trust will be hard hit, while the sugar consumers and the government treasuries on the Continent will experience relief. Says the Philadelphia Press: "The French deficit is nearly all due to sugar bounties. A deficit is near in Germany. Other European budgets are embarrassed. It has for five years been a mere question of time when taxation could no longer furnish the revenue to pay these bounties."

The New Orleans Times-Democrat, an authority on sugar,

"The export bounty was originally placed on beet sugar as a stimulant to production and to make a foreign market for the surplus crop. The countries which paid it kept all foreign sugar out by a heavy duty, the result being that the refineries got better prices for the sugar they sold at home than for the sugar they sold abroad—a condition of affairs we frequently see reproduced in this country in the output of the trusts.

"The first results of the bounty were good. It is doubtful whether the beet-sugar Industry of Europe would have ever reached its present proportions but for the nesistance time given it by the several governments. But it soon grew to be a nuisance, nightions to the country which paid the bounty and to the whole world. The competition between France, Germany, and the other growers of the sugar beet for the markets of the world sent the bounty up higher and higher, until it became an oppressive burden. There have been indications for some time past that Germany and the other countries would be glad to get and of this burden, but they were suspicious of each other and, moreover, those who were interested in the bounty had grown so strong in power and influence that the Government found it impossible to get rid of them.

"Under this stimulation the production of sugar increased too rangingly, until the world raised more sugar than it needed. The increase in consumption has been extraordinary. We are using twice as much per capita as twenty years ago, and England and the United States have run their consumption up to 500 pounds, or a barrel, per family each year. But even this could not sell all the sugar produced.

"This overproduction has forced down the price everywhere, bringing it in many cases below the cost of production and carrying werek and ruin to nearly all sugar-producing countries. The British West Indies have been brought to bankruptey. The present trouble in Cuba, which is made an excuse for a reciprocity treaty, is due to the same cause. It brought the price below what the Cuban planter can raise signs? It is proposed by the President and some members of Congress to protect the Cuban against the sugar export bounty at the expense of the

American producers, and thus extend to this country the evils caused by overproduction, from which the United States suffers less than any other country.......

"The action taken will have a marked influence on the sugar market. It will tend to prevent overpreduction, it will render it impossible to sell sugar below the cost of manufacturing it and yet make a profit, it will not an end to the demonstration that has existed in the market and advance and stiffen prices. Louisiana will be the beneficiary by it, and so will Cubar imided, it will get rid of the conditions I that Island upon which the demands for reciprocity have been based. There will be no need to grant the Cubans the rebate on the sugar duty they are demanding, as the abolition of the bourty will give them a good market in the United States as I pointable prices.

#### HOW CUBA TAKES HER "INDEPENDENCE."

\*UBA'S "Fourth of July" comes on the twenty-fourth of February-it was on that day, in 1895, that her declaration of independence was adopted, out in the bush, by the leaders of the insurrection. On that day, this year, the electors chosen on December 11 met to elect a President and Vice-President of the new republic, so that the dream of independence might come true on the anniversary of the day it was conceived. Despite all this, however, it appears that popular enthusiasm , was painfully absent. The people, so the Cuban papers say, have come to the conclusion that this country intends to give the island merely the show of independence, and will compel the little republic to accept its will in every important matter. The extended continuance of our military rule, the insistence on the "Platt amendment," the alleged American "steering" of the recent Cuban election, and our behavior in the matter of Cuban reciprocity are all taken as confirming this view. The electors chose Señor Tomas Estrada Palma for President, and Dr. Luis Estaves for Vice President

The Union Española (Havana) says that the coldness of the people in the face of such an event and anniversary was "eloquent," and was "very significant in a town so fond of flags, rockets, speeches, and music in the street." La Lucha (Ha-

CUBA: "I don't want a piece; I want the whole pie."

- The St. Paul Dispatch.

- The Washington Star.

vana) calls the election a "mockery" and a "farce," but thinks that the lack of enthusiasm "was no doubt the low water mark of popular indifference and lack of confidence in the bareaucrast who have been self-elected to the positions in the new government," and it hopes that "six months or a year hence, when people have seen how the government is working, popular opinion may become more demonstrative." "Cuba," declares El Mundo (Ilavana.), "is hopelessly condemned to servitude." The Republica Cubana (Havana) takes a very pessimistic view. It saws:

"The truth is that it is painful to think that a date so glorious should be profaned by association with the memory of such a

"The twenty-fourth of February, 1895, was a great day, Cubans of energy and undeniable self-abnegation, at the head of whom figured the two patriots, Bartolomé Masé and Guillerno Moncada, determined to try the decisions of fate, To defend foot by foot the rights of the people: this was the mission which they undertook. To sarrifies all, in order that their country might enjoy the most complete independence; this was the oath they mutually took with each other.

The twenty-fourth of February, 1902-ay-is, on the other hand, a day of profound sorrow for all who feel any pride in the memory of February 24, 1895. For to-day, far from this great anniversary being celebrated with an act of noble and self-denying patriotism, the accomplices of the deceiving foreigner are realizing the crime of pushing back the revolution, endangering its ennobling program, and sacrificing the sacred ideals of their country to the immediate attainment of their unwholesome personal ambitions. To-day Havana is going to pretend to elect four senators. Listen to their names: Carlos Párraga, Alfredo Zavas, Nicasio Estrada Mora, Adolfo Cabello, Ask these four men if on February 24, 1895, they were with the revolution or against it; ask them if on that day they wanted independence or not. If they answer in the affirmative, it would be necessary to despise them utterly, as they would in that case be not even honorable, as the attitude they have always maintained here is known. Well: these are the men who control the present situation, while Bartolomé Masó, the first to take the field for the liberty of his country, and who never wavered, has to shut himself up on his farm at Jaguita, it being impossible for him to fight against American bayonets and American cannon, behind which the Cubans who are mutilating the rights of their country to be free and independent shield themselves.

"Ours is not the language of passion. But we one it to truth to proclain it and wed so, paniful tho it be . . . To-day is the day of treason, as the former was the day of patriotism; to-day, the day of the division of the spoils, as the former was the day of allotment of the sacrifice. Seven years ago those who were going to fight for the bonor of the country tried to occupy the points of danger. To-day they vie with each other in the struger of the contract of the contract of the country instead of a heart a second stomach, and know of no other aim in life save that of self-seeking, even the to do this their country must be assassinated.

The Petition from Guam .- A petition recently forwarded to Congress by the inhabitants of Guam is calling out some remark. The petitioners ask the Government to send out a commission to study the situation and the needs of the people and to recommend to Congress a plan for the establishment of a permanent Government in which they shall have a proper share. The petition is signed by thirty-two persons, who describe themselves as "citizens of the island of Guam, a dependency of the United States of America," who say that they recognize without complaint or evasion their peculiar relation to the Government at Washington. They add that they are "loyal subjects of the United States," and that they are anxious to "mold our institutions to the American standard, and prepare ourselves and our children for the obligations and the enjoyment of the rights to which, as loyal subjects of the United States, we feel ourselves rightfully entitled."

The request was not prompted by dissatisfaction with the mili-

tary rule, but they urge that military government is radically unsuited for the island, and add that it is distasteful and repugnant to fundamental principles. The petition is Indorsed by Commander Schroeder governor of the island.

The New York Times comments on the governor's indorsement as follows;

"The speciacle of a satrap, a minion of the military power, urging on Congress the abolism of his place and the establism ent of a scheme of progressive self-government for the subjects of his arbitrary rule is not what the opponents of the Government would expect. But it seems to come very easy to Commander Schroeder. The petition should receive prompt attention."

The Sun says:

"Guam should have its commission with as little delay as possible. Neither the paucity of the population of the island nothe expense of sending out competent observers and jurists to prepare a scheme of local self-government should stand interval to the property of the property of the property of the way of prompt acquiescence by Congress in this most reasonable request, so engagingly presented."

## AMERICAN SUCCESS DUE TO BRITISH WORKMEN.

STUART UTTLEY, a workingman of Sheffield, England, who has been in this country looking into our industrial conditions, broaches the movel theory that American industrial and commercial superiority is largely due to the British workmen in our shops and factories. Writing in The Iron Age (New York) he says:

"It is a significant fact, and one which is bound to have its effect on the future, that a large number of the most highly skilled workmen in America are either English or Scotchmen. I found quite a number of Sheffielders at Pittsburg; chiefly forgemen and rollers, with some mechanics. One was busy building a steam-hammer of the Davy pattern, with one or two slight improvements of his own, and in one of the largest steel-works there were several of Davy's English-made hammers which had been in use thirty years, and when I was there were being used for the largest forgings. Again at Braeburn works I found all the leading hammermen and many of the second and even third hands Englishmen, and several of them Sheffielders. Again on visiting Philadelphia I found that at the largest lace-factory in the city, with a frontage of 1,500 feet and employing from 2,500 te 3,000 hands, nearly all the weavers were natives of either the city of Nottingham, England, or some part of the country. They had been induced to come over to the States during times of depression in the lace trade in England by the offer of constant employment and higher wages; and as the trade developed these sent out for their mates. I was informed that the whole of the goods manufactured by this firm were for home consumption. It was also interesting to find that the lady who had charge of the female workers was a Nottingham woman. There is not the slightest doubt that so soon as these manufacturers find that they have covered the home market they will turn their attention to exporting their goods, and then Great Britain will have the not very palatable sight of having as competitors men whose reputation has been made and trade built up by means of workmen who have been trained in her own workshops and whose ideas of development and progress have been stifled by the stupidity of her patent laws. In the same city I visited a large carpet-works employing about 500 hands. I found that nearly all the weavers were from Kidderminster, England, and that the machines in use bore the name of a Lancashire maker. These machines had been in constant use for twenty years, and required very little repairs. In justice to the manufacturers it must be admitted that they did not attempt to hide the fact that much of their success was owing to their employment of skilled British work-people. On the contrary, they appeared to pride themselves on the fact that they had been able to tempt such workpeople over by the promise of constant work and higher wages. The more I saw the more convinced I became that America even to-day is largely dependent for her best work upon British trained skilled labor in almost every department of industry. Many of these workmen informed me that they would have preferred to remain in the old country. Several expressed a wish that they were returning with me, hur tall admitted that there are openings in America which would not occur in England, and as their skil was their only capital they felt compelled to accept the opportunity. This point was emphasized in one of the workshops I visited by an English silver-mith engaged on some exceedingly fine work. In conversation he remarked: 'Vou will see that the Americans will take all the credit for this work or and presentation album), but it's not American, it's English. 'How can that be,' I said, 'when it is produced in an American workshop,' whereupen he observed, 'The best brains and the highest skill are British, and the Americans are tempting us with high wages and plenty of overtime to cut out our own brethren in the old country.'

Altho Mr. Uttley is "profoundly impressed with the power, the wealth, the ability, the enterprise, the industry, and the hospitality and kindness of the American people," he remarks that we will do well to remember that we have "net got a complete monopoly of either brains or cash, and as to pluck and endurance when once aroused, the nation is unborn that can rival the British."

#### LABOR-UNIONS AND RIOTS.

H ERBERT N. CASSON, an ex-Methodist minister, whe is new on the staff of the New York World, and who is the author of a number of Socialist tracts and addresses, claims in his new book on the American laior movement that labor-unions prevent lawlesses and revolution. This view will probably strike as novel many American newspaper writers who are of the opinion that the unions have just the opposite effect. Indeed, it is interesting to recall in this connection that in 1890, when Mr. Casson became a Socialist and gave up his church at Oven Sound, Outario, he went to Boston, and with Morrison I. Swift organized the unemployed, and at the head of 10,000 men marched to the state honse demanding relief. In 1894 be founded in Lynn the first labor church in America. Says Mr.

"The trade-union is the most effectual of all agencies for the prevention of lawless violence and private revenge. It is social safety-valve which prevents explosions. By its means the most intelligent and reliable among the wage-workers attack leadership, instead of the most reckless. The orderly action of the many abolishes abuses, instead of the lawless action of the

the many abolishes abuses, instead of the lawless action of the few.

"There have never been any Nihilists, force-Anarchists, Molly

"Yet it is as common as poverty to read attacks upon tradeunions by the press, in which it is taken for granted that unions

"In European trade-unions, with the exception only of the English, there has always been a great deal of revolutionary or Anarchistic sentiment; but that has never been the ease in America. Free speech is the antitoxin

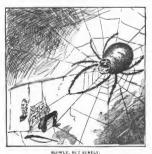

HERBERT N. CASSON

of Anarchy. It is true that a large number of American unions have requested their members to withdraw from the millin, that has been owing to the unlawful use of the millità by capitalists to break up strikes. Unionists are writing to defend their country against a foreign foe, but they are not willing to be used as public Pitalerons to shoot down their fellow workers.

Mr. Casson describes as follows the manner in which the hoodlum begins the rioting .

"The story of the strikers' wrongs, it must be remembered, is told in the newspapers and discussed in the streets. It is picked up by the hoodlum, who at all times is the quickest to express public epinion. The hoodlum is by one means in sympathy with unnoism. He is too uncivilized to understand it. He has no convictions; he is always on the popular side. He would just as soon throw rocks at one man ns another, as long as he had a chance to yell and chase somebody. He reads the newspapers, and a forrectul headline makes a strong impression upon him.

"So, when the presence of a crowd makes secape easy, the hoodlum is on hand with brieks and clubs, to 'have some fun.' He knews the 'psychological moment' when the public is ready to sympathize with lawlessness, and when it arrives he takes advantage of it. The union is no more responsible for the loodlums

-The Detroit Journal.

-The Minneapolis Journal.

than a dead man is for the pickpockets who attend his funeral and rob the mourners,

"Some of the rioters may likely have been 'scales' themselves in some previous strike, but no matter who they are, their lawleasness is blamed upon the strikers by the press and often by the law courts. The least possible daplay of violence generally receives more space in the newspapers than the real issues that are at stake. The smashing of a \$1.000 street-ari is given more prominence than a reduction in wages, which means \$40,000 a year to the strikers.

"There is no more connection between a strike and a strikeriot than tiere is between a river and a drowning accident. We do not want the river drained dry because some unskilled boatman has new with a mislan. And the incalculable national beefit that has been derived from unions and strikes dwarfs the few occasional breakaxes and broken heads into insimificant

"After all, the great truth remains that law and order are not the most essential things. Those who put them above everything else will find Russia more to their taste. Far better have an occasional spasm of revolt—a stremuous fit of house-cleaning in business and polities—than the stagnant calm of despotism."

## THE JOHNSON ADMINISTRATION IN

A STREET-RALIKOAD magnate who believes in low fares, municipal acquisition of the roads, and, eventually, no fares, is not commonly met in this country, and it is not usual to elect such men as mayors of our great cities; but the city of Cleve-land choose such neharcate for mayor last spring, and Mr. Frederic C. Howe, a Cleveland lawyer, is so well pleased with the resulting administration that he has written an article for The Works Works About it. According to this article, Mayor Tom L. Johnson does not make a speciality of consistency.

"Mr. Johnson frankly admits that his wealth came from special privileges; that these privileges were public franchises, government patents, and the protective tariff, and that he does not believe in any of them. The protective tariff he strove to holishis while in Congress; and as for public franchises, he would tax them, and, eventually, bring them under public ownership. As to the special privilege of private ownership in land, he would destrow this by the single tax.

"With his brother Albert, he has operated railways on a large scale in the city of Brooklyn and the city of Detroit, and through the reorganization of street-railways in these cities (and in Cleveand] he has become a rich man. It is with this intimate knowledge of the street-railway situation that he became mayor of Cleveland upon a platform of lower fares and ultimate municipal ownership. Even on the basis of private management, Mr. Johnson is a believer in low fares : and he says that he demonstrated while operating the railroads in Detroit that as much money can be made out of three-cent as out of five-cent fares; for a corresponding increase in traffic follows any reduction in rates, and any loss is made up by the great increase of short hauls and the wider dispersion of that portion of the population which now either walks to its work, or lives, through necessity, in the neighborhood of its employment. . . . Ultimately, Mr. Johnson thinks the street-railway service should be free."

So much for his theories. As for his practise, in administering the Cleveland city government, Mr. Howe says:

"Mr. Johnson has been mayor for so short a term that his achievements any yet hardly been merated. For public changes come slowly. On his inauguration he announced a liberal policy toward saloons, but adopted a vigorous one toward those which were disorderly. Instead of raiding them a policeman in uniform was placed at the door, and the name of every person who entered was taken down. The result was that rough or disorderly piaces were closed up or the nature of their business was changed. Police raids have been discontinued. Only in rare ment of the policy adopted and not for the purpose of revenue. Police court fines in most cities are but a guaranty of moninterference for a given time. They are so regarded by those who are

fined, and aside from the unfortunate publicity given, the opportunity for blackmail and the like, they make the city a participant in vice and lawlessness.

"In those administrative matters which are social rather than political Mr. Johnson's ideas are very prorogunced—to some minds dangerous. Upon his accession to office he found the city workhouse, to which are committed all persons guilty of misdementors or petty offenses, filled with persons who had been committed because of the non-payment of fines. Many of these were first offenders. Others were detained from thirty to sixty days while working out their seutences. Mr. Johnson terrated this imprisonment for deta, a punishment for being poor. While the well-to-low the manufactured that the contraction of the

to pay their fines and go free, a man who was merely a suspicious churacter or who had been arrested for intoxication or some other minor of fense, was separated from his family and kept in durance for a long time, with the strong probability that upon his release he would be less able to support himself and much more dangerous to society than at the time of his arrest. Since then there has been what many people consider a wholesale jail delivery. Great numbers of men and women (more than 300) have been released after

TOM L. JOHNSON, Mayor of Cleveland.

an investigation of their offenses, and less than twenty, a comparatively small percentage, have been recommitted, thus demonstrating that they were detained not because they were inherently vicious, but rather because of misfortune.

"A like liberal spirit has characterized his administration of the park system. Several playgrounds have been established in the most thickly congested portions of the city, while in the parks themselves golf, baseball, tennis, and all sorts of manly sports lave been encouraged. 'Keep-off-the-grass' signs have been alsolished, and the children have the fullest and freest access to the turf. The item of public battis has received his indoorserowded portions of the city.

"In the public works department, a system of cleaning the streets by direct labor, by the 'white-wings', system, has been adopted, while a radical departure has been inaugurated in the water-works department of reducing rates and instilling universal meters. By the latter plan it was urged that great economy in the consumption of water would be brought about and the city saved millions of dollars in extensions to the pumping machinery, water-mains, and the like.

"It is a fortunate thing for a large city to have an executive who can think in large figures. The average public official becomes embarrassed when his mind is called upon to contemplate sums in more than four units. His experience has been limited, and public matters involving large expenditures and large ideas find him wholly at sea. Mr. Johnson's experience has been with big things. In consequence, it is possible for him to adopt and carry out plans which to other men would seem too large or too hazardous for a city to undertake. The city of Cleveland is about to erect a number of large public huildings. The opportunity was appreciated by many of so grouping and harmonizing these structures that a splendid architectural effect would be produced. This involved the expenditure of large sums of money, and after the public committees appointed to report upon the subject had reached the hmit of their own ideas, Mr. Johnson advocated a larger and more comprehensive plan which would lead to the destruction of a considerable area between the business center of the city and Lake Erie, and the development there of a magnificent court of honor which would be a standing moment to our civic institutions. This matter has been energetically taken up, and, if legislative aid is secured, it may be carried to a successful completion.

#### WHEN AMERICANS TAKE CONSTANTINOPLE.

M ISS STONE'S captivity recalls to W. T. Stead an idea that he says he has entertained for some time—that the "Eastern question" in Europe may be solved by an American occupation of Turkey. Cobden, he reminds us, had in mind the same remedy, "Who can doubt," wrote Cobden, a generation ago, "that if such an arrangement could be made, before long the desert would blossom as a rose? Great centers of busy industry would arise in territories that were at one time the grnnary and treasury of the world," Cobden did not say how the "arrangement" would be brought about, but Mr. Stead predicts how it will be done. The territory from Ararat to the Algean is dotted with American missionaries. "To-day, thanks to the operation of a band of brigands on the Bulgarian frontier, the eyes of the public have been opened, and both in Europe and America the man in the street is talking of possibilities in the Ottoman empire which then seemed to lie outside the range of practical politics." Mr. Stead continues (in his new book on The Americanization of the World ") :

"It seems to me the most natural thing in the word that some fine day there will be one of those savage outbreaks of relygious or imperial funations which will lead some unhanged ruffian who has been decorated by the Sultan, or some Eurdish check, to take it into his head to avenge the wrongs of Islam on the nearest American mission-station. He will sweep down at the head of his troops upon a school or nanse. The building will be given to the dames, the American missionary will be flung will not the burning building to perish in the fire, while his wife and daughters will be carried off to the harem of some pasha.

"Nothing could be more natural or more in accordance with the ordinary practise in these savage regions. There is uo available fore to defemt the American settler from their assailants. In these remote districts it is often possible to conceal a reine for months by the very completeness with which the victims have been extirpated. But, of course, after a time, whether it be weeks or whether it be months, the fate of that mission-station would be known.

"The story of the great massacre, when the missionary was burned alive in his own finning schoolhouse, would teak out, and then in the natural course of things some enterprising newspaper man would make his way to the scene of the outrapear would verify the facts, would ascertain the whereabouts of the unfortunate American women, and possibly return to the outrapear would verify the facts, would ascertain the whereabouts of the unfortunate American women, and possibly return to the outrapear would be arrived to the contract of the country of the country of the world bearing with him a pathetic and urgent appeal from the captives, for resoue from the Turkish harem.

"This outrage, after all, is nothing more than the kind of thing to which the Christian races of the East have had to submit from generation to generation. The victims have been as white, as Christian, and as wretched as those whose imaginary doom at the hunds of the Turk or Kurd I have been describing. But in latter case the girls with their devoted mother, who may be subjected to the worst outrage at the hands of their captors, would differ from the Armenians in that they speak English. That one difference would be vital. On the day on which that arran enwapes to the control of the

"There are eighty millions of human heings in the United States, most of whom speake English, and each one of whom would feel that the imprisoned women were even as his own sisters. On the day on which the news of their incarceration and outrage reached the Christian republic of the West, the whole of the eighty millions who inhabit the invulnerable fortress which nature has established between the fosses of the Atlantic and the Pacific would start to their feet as one man, and from the whole continent would rise but one question and one imperative command.

"The question would be: 'Where is Dewey? Where is Sampson? Where are our invincible ironclasts, which in two hatties sweep the flag of Spain from the seas? Why are our great captains roosting round upon their battle-ships, while such horrors are inflicted upon women from America? And after that inquiry would come quick and sharp the imperious mandate: 'To the Dardanelles!' To the Dardauelles!'

"In three weeks the commanders who shattered the Spanish fleet in Manila, and drove the ironclads of Admiral Cervera in blazing ruin upon the coast of Cuba, would appear of the Dardamelies to exact instaut and condign punishment for the outrage inflicted upon American women.

"Nor would they step at the Dardanelles. The Stars and Stripes would soon fly over the waters of the Sea of Marmora, and the thunder of the American guns would sound the deathknell of the Ottoman dynasty. No Power on earth would be nibe to arrest the advance of the American ships, nor, indeed, is there any Power in Europe that would even attempt to do so. The patience of Christendom has long been almost worn out, and Europe would probably maintain an expectant attitude while the deathblow was struck at the crumbling relies of the Ottoman Power.

"When the Sultan had fled from Stamboul, leaving his capital to the violence of the mob, the Americans, to save Constantianople from the fate of Alexandria, would be compelled to occupy the city of Constantiane, and, as our experience has long shown, it is much easier to occupy than it is to evacuate. Every day that the Stars and Stripes floated over the gates of the Eaxine would tend to familiarize Europe with the idea that, of all possible solutions, the indefinite occupation of Constantiapole by the Americans might be open to fewer objections than any other conceivable solution. Thus, at any moment, owing to what may be regarded as a normal incident in the methods of Ottoman misrale, Cohden's dream might be fuffilled, and the great republic of the West become the agent for restoring prosperity and peace to the desoluted East."

#### LETTERS AND ART.

#### IS THE PRESS DECENERATING?

THAT the newspaper has made amazing progress during recent years, on the mechanical side at least, is obvious; but the question is being asked with increasing frequency whether its noral influence has been commensurately great. By many this question is emphatically answered in the negative. Mr. G. K. Chesterton, a London journalist whose name is coming into prominence in English literary crictes, finish an element of danger in the attitude of cynkism and even contempt assumed by so many people toward the press. While admitting that "journalists have vices generated by their trade, like men of every other trade," he claims that "they also have merits which are far less often comprehended." He says further (in The Pall Mall Magazine, Pebruary)

"One great merit of journalism is that it has reasserted finally the poetry of the actual word. Both for the glory of God and the inspiriting of men it is no small and no slight thing that the most popular and widely read of all romances is simply the record of the common doings of one common day. The journalist has, for example, the fault of exaggeration, the making of small things great; but in this he towers immeasurably over the wast herd of trivial philosophers, who are sullenly occupied in making great things small. If his vice is exaggeration, it is the same vice as the poet's. It may be an evil to make mountains out of modelalls, but it is far removed from that dusay skepticism common thins.

"A second merit the journalist has: the merit of discipline, the merit of unselfishness, the merit of obscurity. In an age where by common consent vanity and self-advertisement have become an enuat epidemic, it is again on small and no slight thing that the preaching to the masses should be done by a hand an anneless as the brothers of the Misericordia. The poet writing his name upon a score of little pages in the silence of his study may or may not have an intellectual right to despise the journalist; but I greatly doubt whether he would not morally be the better if he saw the great lights burning on through darkness into dawn, and heard the roar of the printing-wheels weaving the destines of another day. Here at least is a school of labor and of some rough humility, the largest york ever published anonymoutly since the great Christian earbedrafs.

The true attitude toward journalism, adds. Mr. Chesterton, should not be one of contempt, since 'no condition could be worse than that we should despise a force at the same time that we fear it." The journalism already hold the key of knowledge, and it should be the business of the people to "make them et the dignity of power, until a corrupt journalism should be an antithesia sa black and sharp as a corrupt joics."

Mr. Thomas B. Connery, whose experience in journalism extends over thirty years, during fourteen of which he acted as the manager of the New York Iteratle, gives it as his opinion (in The Fordham Monthly, Februarry) that "while there has been great progress [in journalism] in some directions, there has also been a quality of deterioration observable, which is dangerous as well as dishonorable." As evidences of this degeneracy be enumerates the following shorteomings:

(1) Careless editing and recklessness in statement. The managing editor is no longer a conscientious supervisor of news; he has become a mere promoter of sensation, of exaggeration, and of misrepresentation, when these are necessary to produce "spicy" reading.

provided by private rights. No man's character, no woman's name, is act to day from the blasting pen of the sensational reporter. The most cruel wrongs are inflicted somenimes—wrongs irreparable offen, because in many cases the retraction, correction, or vindication is not seen by people who read the original charge.

(3) The bogus "extra." The word "extra" printed on a news-

paper is no longer an assurance of new and important intelligence. Usually now it signifies little more than startling headlines, purposely designed to deceive.

(4) Worthless illustration. In its early stages newspaper illustration was useful and creditable, but it is now rapidly degenerating to the point of worthlessness.

Against these evidences of deterioration, however, Mr. Connery sets several signs of healthy growth and progress. These are seen in the enormous expansion of advertising patronage, the increase of enterprise generally, the multiplication of independent journals, and the gradual decay of mere party organs. Twenty or twenty-dive years ago the New York Herald was almost the only daily journal noted for steady enterprise. Now "there are perhaps a dozen other newspapers in the country some in New York, some in Chicago, San Francisco, Booton, and even Philadelphia, capable and ready with all the dash and enterprise necessary for great achievements.

# THE VOICE OF THE OUTCAST IN LITERATURE.

"I HAVE come from below, from the nethermost ground of life, where is naught but sludge and murk. . . . I am the truthful voice of life, the harsh cry of those who still abide down there, and who have let me come up to bear witness to

MAXIM GORKY.

Courtesy of The Comrade (New York).

their suffering." In these words is embodied the message of Górky, the Russian "tramp-novelist," the portrayer of the vagationd, the criminal, and the outcast. Remarkable as are the types that he describes, his own life has been ne less remarkable (see Time Littara Vibers, March 30 and September 38, 1991), "The ups and downs of his desperate struggle for mere existence," declares Mr. E. J. Dillon, in The Contemporary Resider (February), "as contrasted with the perfect ease with which, on emerging from the subterranean depths, he swept everything before him, winning world-wide fame and taking the commanding heights of literature by storm, have, in truth, more of mystery and of palpitating interest than the viciositudes understand

by the most heroic figure in the long procession of strong-willed vagrants whom he has caused to defile before our eyes," Mr. Dillon continues:

"The types of Görky's sketches were a new set of men unknown to Tokstoy and Turgenetf—a class one can not call them —blessed or cursed with very different aspirations from those of the enfranchised serfs. Stalwart, mobile prolectaires, they might in a certain sense be classed as idealists. Despising and abandoning the pleasures, the comforts, and the prizes of civilized life for the sake of absolute liberty, they were unfettered by the criminal codo of the state or the tables of the Mosaic law. They would march along for days in Arctic cold or tropical heat, half nacked and lungry, cowering or oralny nights in spiturated boats, and the control of the control of the cold of the cold of the model of the cold of the cold of the cold of the cold of the total the cold of the cold of the cold of the cold of the total cold of the face of the craven-hearted peasant comrade who has made money his god,

"It is around this central ideal of personal liberty, exuberant strength, and ficrce rebellion, as embodied in types like these, that the entire cycle of Gorky's sketches revolves. On the sayage champions of this lost cause, with whom he does not shrink from identifying himself, he lavishes his sympathics; for them he bespeaks the admiration of his readers. He loves beings who once were men, not merely despite their vices but because of the qualities from which those vices emanate. They are almost denuded of the instincts and principles with which we are accustomed to identify morality; they ignore conventions and scorn every species of fig-leaf; but, altho aware of their nakedness, they are wholly unashamed. They pride themselves on being carth-men, rugged realities, products of nature, endowed with more of her sincerity than the sleek citizen who masquerades in the garb of morality and sucks the life-blood of his fellows. Strong-willed, iron-thewed, yet highly sensible to the beauties of sea and sky and steppe and wood, they long for an opportunity to put forth the almost creative force which thrills their being, delighting not only in the tepid breath of sonthern nights and the warm wooings of sunny days, but also in the howl of the hurricane and the very boom of the thunder which may prove to be the blast of the trumpet calling them to death and judgnient."

Gorky, continues the writer, is a master of the short sketch, the gentr. In paints "a waste of water or a wilderness of gray land as background, and two or three human figures as dramatis persons;" and the picture is complete." He gives us "idyls of squalid beggars and hardened criminals," and allows them to gather a certain quality of nobility from the vast steppo or the boundless ocean. We quote logain:

"There are two distinctly defined types of character in the cast of Górky's psychological studies: the men and women who by the sheer weight of their gross, tainted nature sink insensibly to the lowest depths of pandemonium whence there is no hope of redemption, and the superior but restless spirits who, impatient of restraint, hold, like Satan of old, that it is better to reign in hell than serve in beaven, and are swayed by impulse and stirred by hatred whithersoever they go. On the one hand we behold the dregs of society, the heirs of physical and mental disease, the slaves of drink, the victims of misfortune, the bondsmen of vice-in a word, the flotsam and jetsam of the ocean of life, washed upon the beach and left there to rot in tho rain and the sunshine. And on the other we are confronted with the born rebels who relish nought that life can offer or promise, who are seeking not merely the unrealizable, like the alchemists of vore, but the unknown and unknowable, who hurry from thought to thought, from impulse to impulse, from place to place, and from crime to crime, as if lashed by unseen furies for forgotten sins, finding no haven of rest except such end as may come to the beasts, or deliberate suicide,"

What is the drift of Górky's philosophy? What Icsson are we to Icaru from his "barefoot brigade"? Mr. Dillon answers:

"A careful study of everything which the new Russian prophet has given to the world will convince the unbiased, even among his warm admirers, that the net result of his teaching is largely "It is hardly worth our while to descend to the depths whence Maxim Gofry has enterged, where there are no barriers against evil, no stimulus to good, where there is neither fear nor hope nor sympathy nor sorrow, in order to bring up such dismal teachings as those. Having read through all the volumes of his writings, and met the same Titanic champion of might and the same pitiable craven-hearted follower of Jesus of Nazareth, one feels disposed to accept the estimate given of these creatures by Konovaloff, who ultimately hanged himself:

"We are people apart . . . we are not included in any order. There ought to be a special above . . special laws . . . very severe laws, in order to root us out of existence. We are of no use, yet we take up a place in life and stand in the way of others. Who is to blame! We are guilty in our own eyes and place of the severe way to be a severe of the severe way to be severed to

#### THE GERMAN THEATER IN NEW YORK.

I N view of the gala performance at the Irving Place Theater,
New York, which took place on March 10 in honor of Prince
Henry, it is not inappropriate to recall the fact that for nearly
ten years this German theater has existed in New York, setting
a higher standard for dramatic art than obtains in any other
theater in the country. Mr. Norman Hapgood, the dramatic critic
of the New York

Commercial Advertiser, goes so far as to declare that "our one high class theater is the Irving Place Theater, New York." Says Mr. Harry P. Mawson, writing in The Theater (New York, March):

"German theaters have existed in New York for the past fifty years, but it may be said that not until the advent of Heinrich Conried as the manager of a stock company at the Irving Place Theater, nine years ago, did the German.

Photo by Pach, MR. HEINRICH CONRILIE.

stage in this country have the advantage of a cultured and artistic director. Mr. Conried, indeed, is the best equipped theatrical manager in the United States, he being a fine actor and musician, a master of languages, and an excellent man of affairs. To this rare and exceptionable combination is due the high standing his theater and his company have secured. Mr. Conried is now in the twenty-fifth year of his managerial career in this country. In recognition of his services to the stage, the Emperor of Austria, the Kings of Belgium and Italy, the Duke of Sachs-Meiningen have conferred on him decorations, and the Emperor of Germany the highest order yet given to an actor. The University of Pennsylvania has given him the degree of M.A., and Harvard University recently elected him a member of the committee on Germanic literature.

Mr. Conried, continues the writer, has wider sympathies than any theatrical manager since Augustin Daly. He possesses at once taste and imagination and a commercial sense. "It is because of the possession of these essential characteristics by Mr. Conried that one finds a literary quality in many of the plays produced at his theater which is almost wholly wanting on our American stage." On an average Mr. Conried reads one play a day throughout the year, and there are sometimes as many as four plays produced in six days at the Irving Place Theater, The writer goes on to say:

"It is inevitable that a comparison should be drawn between the character of the productions at the German theater and those on the American stage. It is forgotten, however, that there is an enormons difference in the character of the plays presented, The German stage seldom brings forward aught but plays the scenes of which are laid among the plain people; whereas, upon our stage, in its hest theaters, inheriting its traditions from London and Paris, one finds plays dealing almost exclusively with the higher classes.

"Mr. Conried has two elements to please in his theater, the German-born and the German-American. Both these elements must be dealt with, one demanding more solid food than their German-American children, who, already somewhat Anglo-Saxonized, refuse to patronize problem plays, so that it is no easy matter to arrange a repertoire that shall meet and satisfy these opposite tastes. And yet in spite of the great German population in New New York, six performances is the limit of a run,

even with a great success.

"The leading actors of the Irving Place company include Hedwig Lange, Hedwig von Ostermann, Marie Reichardt, and Hermine Varma, and Herren Alexander Rottmann, Adolph Zimmermann, and Gustav von Sevffertitz. In addition to this regular company the distinguished actors, Herren Adolph von Sounenthal and Ferdinaud Bonn, and Frau Helene Odilon, are expected to arrive in this country at the end of March and appear here in April."

The difficulties of the average American theatrical manager are as nothing to those which encompass Mr. Conried. It is impossible for him to obtain in this country the talent that he needs, and in cousequence he is compelled to make a tour of the principal German theaters on the Continent at the close of each season. Mr. Mawson declares:

"At first he had immense difficulty in securing even mediocre actors willing to risk their precious lives crossing the Atlantic, to live in a country where the language is not their own, and to brave the dangers from the barbarians with whom New York, in the simple Teutonic mind, is largely peopled. Then there were idiosyncrasies of previous managers of German theaters in New York to be wiped from the slate. Now, however, all is different. The German theater in New York is recognized throughout Germany as one of the representative theaters of the German stage, and Mr. Conried has comparatively little difficulty in securing a first-class all-round stock company to risk themselves for several seasons in New York."

Free Traveling-Libraries in the South,-A system of circulating libraries that promises much for the educational development of the South has recently been organized in Georgia under the uame of the "Andrew Carnegie Free Traveling-Lihraries." The plan has secured not only the interest of Mr. Carnegie, but also the cooperation of a great Southern railway, the Seaboard Air Line, which gives free transportation to the libraries over its lines, extending through Virginia, North Carolina, South Carolina, Georgia, Florida, and Alabama. Mrs. Eugene B. Heard, who is organizing the movement from Middleton, Ga., writes to the editor of The LITERARY DIGEST:

"These libraries are intended principally for the small towns and stations, and we have recently added a number of school libraries composed of juvenile books for the rural schools that make the required effort necessary to secure them by the improvement of their schoolhouses and grounds. This library system proves to be one of the most effective and powerful of educational agencies. The material and measurable benefits are singular and unmistakable."

The late President McKinley took a personal interest in this movement for bringing good literature within the reach of the isolated communities of the South, and it is proposed to establish in his memory a number of "William McKinley Libraries" for circulation among the rural schools. The books will center on American literature, and will be sent out in substantial hardwood cases containing from fifty to one hundred volumes. Each set will be accompanied by a number of historical pictures, including a fine half-tone of Mr. McKinley, to adorn the walls of the schoolhouses. Says Mrs. Heard:

"The libraries will be prize libraries offered to the schools that make the most improvement in the surroundings of their schoolbouses, the painting of their huildings, ornamenting the grounds. planting trees, shrubbery, etc. In no section of the United States is a movement in this direction more imperative than in this one. The 'William McKinley Memorial Libraries' will do a great and lasting good, and will prove a monument better far than sculptured stone, for these little libraries stand for character-building so highly prized by our martyred President."

#### TOLSTOY'S "POWER OF DARKNESS."

HE particular form of darkness contemplated by Tolstoy in his peasant tragedy, "The Power of Darkness," which was produced in the German language at Conried's Irving Place Theater, New York, on March 4, is the darkness of ignorant instincts, and its chief exponents are women. The decidedly uupleasant character of the play may be judged from the following account of the plot in the New York Times :

"Nikita, the protagonist of the play, is a robust young Russian muzlik of a rather simple and ingenuous frame of mind, who might have done very well in the world if his relations with women had not been extensive and miscellaneous in the ex-

"In the first act his father, a pious old peasant, has almost persuaded him to marry an orphan girl whom he has wronged, but his mother-one of the powers of darkness-discovers that the wife of his master, a rich and invalid peasant, is in love with him, and persuades him to renounce the orphan in order to marry the wife for her money when the husband dies. Nikita falls in with the plan, remarking that if he were to marry all the women he has wronged he would add extensive polygamy to his manifold sins. To hasten matters Nikita's mother works upon the wife until

between them they poison the invalid. Then the mother discovers that in order to make sure of the money it is better for Nikita to make up to the daughter instead of the mother. Again he falls in with the plan, and the two young people squander the money together, without, however, being married. When a child is born they kill it and bury it in the cellar. By and by

the daughter is married to another peasant.

"Meantime, Nikita's father has rebuked him for his evil ways, and he begins to feel a growing lonesomeness, even remorse. When, at the wedding of the young woman whose child he has helped to kill, he is asked to give his blessing upon the marriage, his conscience overcomes him. At first he tries to hang himself, and, failing, he publicly confesses his crimes. He is dragged out to justice as the last curtain falls, a victim of the powers of darkness.

Revolting as are these details, declares The Times, they are mitigated in the drama by the colossal simplicity and truth with which they are presented, "Every situation, every line, is stamped with the hall-mark of truth." The Times continues:

"The motives that sway these Russian peasant women are presented with all the sordid details of common life; but they

are no more noble and no less noble than the motives that sway Goneril, or Regan, or Lady Macbeth. Nikita's end is, in its way, far nobler than the end of the Thane of Glamis.

"To the public that hungers for superficial glitter and light upon the stage, and whose mental horizon has pince for only the politic and conventional villainies of the Broadway theaters, "The Power of Darkness" would prove heavy and depressing; when such people write about such pluys, they usually call them degrading, even immoral. It is perhaps politiest to regard this as a matter of taste; but to some extent, at least, the question of intelligence enters also into the account.

"After all, as was remarked-so long ago, we are men, and nothing human is without interest for us. If such a play depresses and revolts, the fact is largely due, perhaps, to the serity of the tax it makes upon our human sympathy and instelligence. All the forces of modern education lead us to ignore the deeper aprings of human life, to think lightly of its vital currents. Only those who have fneed life honestly and with understanding can look undismayed into the darker chambers of the soul. These are the people who have the highest of all gifts of the theatergoer, the sense of tragedy."

## IS A COLLEGE EDUCATION OF ANY VALUE IN BUSINESS?

An exhaustive investigation was recently undertaken by Mr. R. T. Crane, of Chicago, with a view to ascertaining whether au academic education is of any real benefit to young men who have to earn their own living and who laten to enter upon a commercial life. "A great deal has been written on this subject," observes Mr. Crane, "but, so far as 1 have been able to discover, the writers have given merely their opinions or theories, not facts." Mr. Crane, setting out to discover the "facts" in the case, sent nineteen letters to the presidents of the priucipal universities and colleges of the country, and one hundred letters to leading beniess men in every important branch of commerce. The results of this important and interesting investigation lepublishes in booklet form.

As might be expected, the college presidents are almost all of the opinion that an academic education is of very great advantage to every business man. President David Starr Jordan, of the Leland Stanford, Jr., University, voices a representative opinion when he declares his belief that a college education "Is of daily advantage to any man of brnins and character," because It gives "a broader horizon, a more refined taste, a saner judgment, and a higher range of friends." President Benjamin Ide Wheeler, of the University of Chlifornia, and President G. Stanley Hall, of Clark University, are the only ones who are ready to admit that the presumption is against the utility of an academic course for business men. President Hall says: "In general, my opinion is that the utility of an academic career for business purposes depends largely upon what kind of an academic course is taken. On such a scale I fancy the old classical course would mark very low, and some of the modern technical and commercial courses and many of those in the sciences would mark very high,"

Of nearly 1,600 letters sent out by Mr. Crane to graduates of all the principal colleges, about one-third were maswered. Four hundred and ninety of the replies received were from students who lad either taken up a professional or technical line of work, or who stated that they did not come within the scope of the investigation. This leaves only sixty-five letters that came strictly within the field of the linquiry. The question whether a college education had been of benefit to them, in the performance of their duties and in securing advancement, was answered in the affirmative by fifty, and in the negative by seven. To the question whether their college deducation was of any advantage to them in obtaining a situation, thirty-two answered "yes," and twenty-seven "oo." Sixty out of the sixty-five said that, if they had their lives to live over, they would take n college course, for even those who admitted that they would be better off financially if they had not gone to college claimed that whatever they lost in this respect was more than compensated for by the college experience and the increased capacity which it gave them for enjoying life.

This weight of evidence on the side of college education is still further supported by the testimony of a large number of the most successful business men of the country. Mr. Lucius Tuttle, president of the Boston and Mnine Raiiroad, declares that "in selecting help, we should give preference to a college-educated man, all other things being equal." Mr. George B. Harris, president of the Chicago, Burlington, and Quincy Railroad Company, gives it as his impression that college men are "hetter trained and rise more rapidly than persons who have not attended college." Mr. E. C. Simmons, of the Simmous Hardware Company, St. Louis, expresses himself very strongly as being in favor of college education for business men. Mr. Cyrus H. McCormick, president of the McCormick Harvesting Machine Company, thinks that "under the same environment and with the same opportunities" a college man would win over the man who had not the same advantages. On the other hand, Mr. Henry W. Cramp, of the Cramp Ship-Building Company, declares that "we employ men solely with reference to their capacity for the work which we desire them to do, and it is entirely immnterial to us how, when, or where, or by what kind of process they acquire the education nud training that may fit them for their duties." Mr. S. Norvell, president of the Norvell-Shapleigh Hardware Company, St. Louis, affirms that his experience with college men has not been in their favor. "After several years of leisure," he says, "and the independence of a college life, a young mnn who enters one of our large modern business houses finds himself sadly out of place and out of touch with his surroundings." Mr. Edward Townsend, cashier of the Importers and Traders' National Bank, New York, considers that the best possible material for the development of the business man is found in the boy of about sixteen years of age who is taken from school without previous experience and trained in business methods.

Mr. Crnne, strange to relate, is not convinced by the very opinions that he has himself marshaled, and, the compelled to admit that the prependerance of evidence is in favor of a college education, he holds to the opinion that the present universities are 'a most stupendous mistake, if not a positive injury 'to young men who intend to pursue a commercial calling. The business men's testimony he regards as very inconsistent. He declines:

"The trath of the matter is that, when it comes to considering an applicant for a position, few of these gentlemen will be found to pay any attention to the amount of knowledge he may have of Greek, Latin, literature, etc., or care a straw about the metal drill and discipline or the well-rounded character that he may have acquired through a conress at college.

"What they are particularly interested in knowing is whether he understands their business and can promote it. This is all that has any weight with them in the selection of help."

Proceeding to a consideration of the cost of a college education, Mr. Crans sums up the different itiems as follows: Cost of high-school conrise, \$4,50; cost of college course, \$4,000; amount which the student would probably have enrared in some business occupation during the seven years spent in high school and college \$3,500; amount lost during the first four years of business experience, as compared with the money earned by one who had spent the whole seven years in business, \$2,000. Total. \$7,550. Mr. Crans continues:

"The whole world is a college, and one who wishes to obtain knowledge will find plenty of opportunities for doing so. . . . . . "For illustration, take such men as Westinghouse, Edison, Cramp, Scott, and hundreds of others that might be mentioned. I contend that the happiness which the most learned college man gets out of life does not compare with that obtained by these men from their business.

"The greatest pleasure n man can have is that which arises from the feeling that he has been a success in a creditable occuration."

"On the contrary, the greatest unhappiness comes from the knowledge that one's life has been a failure, and it seems to me that the more a man has of ordinary education, the more severely will be feel this failure."

#### A FRENCH VIEW OF THE LITERARY MOVE-MENT IN THE UNITED STATES.

"The evolution of the United States has offered, in the course of typ1, a new manifestation of its urreless activity," writes a French critic in La Krene (Paris). "While in the economic and social domains labor was receiving an ever-increasing impulse, the bookstor was taking a truly gigantic strade. The great publishing houses were flooding the market with hundred of thousands of copies of new novels." This campaign of publishers and booksellers, developed with all the American "go ahead," the writer attributes to several causes, the chief of which is described as follows:

"Ranking as the chief industrial, commercial, financial, multimillionaire and billionaire nation, it [the United States] feels the need of arrogating to itself the same intellectual supremacy. In applied sciences, it is the boldest and the most triumphant of inventors; in mechanics and machinery, the most advanced of constructors; in pedagogy, the most zealons of innovators, freeing itself from superannuated methods and giving its most careful attention to the most modern conceptions of instruction and education: . . . its self-love and its ambition aspire still higher: it wishes to attain the summits of art and literature. Only in order to reach these heights, it does not follow slow and sure roads, its nature being to advance straight to its end, reckoning, as in business, the saving of time again. From this it results that the greater part of its artistic and literary productions, at the present time, with a few exceptions, are marked by the hasty pursuit of immediate result which is, in the eyes of Europe, on the contrary, a certain mark of inferiority. When it derogates from the rule dictated by its temperament, it is no longer entirely, absolutely itself; it assimilates foreign qualities, modeling its creations after masters that are common to it and England and through England with Europe; it abdicates, to a great degree, its first originality. Its artists, poets, and prose writers are distinguished, in this case, only by a talent which bear no traces of the true American imprint. Its painters and sculptors are almost all at the present time living in Paris, a few in London or Munich; very few remain in the United States. They seek inspiration in France, England, or Germany. They belong in many respects to either the English or French school. . American art has a personal accent only when it is associated with the esthetic exigencies of industry, such as the jewelries of Tiffany, or the architectural innovations of Hunt and of Sulli-

American literature is rich in classical celebrities, continues the writer—names that testify to incontestable literary vitality and that do not pale before the most brilliant of Europe. Yet all these shining lights whose rays have extended far beyond the American boundaries have preserved only a few reflections of their popularity. These authors, for the most part, found readers for only a certain length of time and in only a limited circle. Of the dime novel, which made its appearance about the middle of the innetcenth century, the author has this to say:

"The reason why time novels attracted so many thousands of readers was in reality nothing else than the awakening of ideas of adventure, extreme daring, exploring the unknown, measuring himself with the unconquerable, which lies dormant at the bottom of every Yankee brain. The American, in face, examined closely, is, by origin and temperament, an adventurer. He has preserved under his more moder anynexance and clothing the instinct of the trapper, and Wall Street, where he gos to hun, millions, is for hun only another far West where scarcely a hundred and fifty years ago be hunted wild mimals. An adventure, he throws himself headlong into speculations; an adventurer again, he explores, like Rilson, the mysteries of physics or of chemistry; or, still an oldventurer, in company with the Rongh Riders, he rushes off to conquer Cuba and becomes President of the remblie.

"This spirit of adventure irresistibly draws the Yankee on, he can not withstand it. As in the Scandinavian mythological tales—note that he has ancestors among the first Northnen—he advances toward the heights where dwell the gods that he must conquer. Each one of his thoughts and each one of his value of a confession of his impatience for adventures, under one form or another."

The same trait dominates his reading, says the writer. American publishers did not lose sight of this when they so skilfully organized the intellectual revolution that has recently taken place. They selected the kind of novel suited to print in the newspapers and advertise in every possible way. No other subject than the historical one would have succeeded. The only book destined to please and intoxicate the masses was the one that thrilled the inmost being of the Yalkees adventurer.

There is, however, one kind of Americau literature that, having had a glorious past, enjoys to-day a brilliant present. It lays claim, among its ancestors, to such illustrious names as Benjamin Franklin, Washington Irving, Oliver Wendell Holmes, Mark Twain, Bret Harte, Bill Nye. "Beside these generals and colonels of 'American humor,' march close ranks of young writers who carry in their belts marshal's batons. The critic follows their works with tenderness and lavish encouragement."

In the midst of the legion, ever increasing, of authors of all sorts who are competing for the hundred editions, are seen many that are, to say the least, mediocre. To the fever of reading corresponds the fever of writing. There is not a young girl, just from school, who does not bring her novel to the publisher. With special reference to the nuch advertised popular novel of the present moment, the critic concludes:

"This bighton of the American booksore not only affects the masses, but searcies a fatal influence over literature. When publishers become quacks, the great drums that are beaten at the doors of their booths must inevitably burst, and serious works suffer in consequence. What is still more to be regretted is that this literature, offered under these conditions, as at a flower-market in which there are plants whose luxuriant folloge is the result of forced growth, becomes confrounded with another and different literature, and one of these novels is taken as an example of all. In addition, the authors being themselves in doubt as to just the extent to which they ought to make concessions to the popular taste, the general teudency is toward the lowering of the literary style and impovershing of the plot.

and the regretable resent, one that threatens a real danger, is that true literature, such as recalls Hawthurne or James in the novel, Bryant, Longfellow, Whittler, and Whitman in poerry, will disappear unperceived in this monuting tide of methocrity. Rarely, very rarely, do the poets just enumerated find emulars, and for one Edwim Markham, who equals them with 'The Man with the How,' justly ranked among the first by Max Nordau, how many empty rimers! If American publishers continue as they are doing, they can not but reflect discredit upon the reception accorded to the latest novel of Henry James, 'The Sacred Fount,' I she not reproached with being a mere styllst, a rafint of letters!

"Finally, admitting that there are people clearsighted enough to distinguish charlatanical from meritorious literature, there is a serious peril in this plethora of publications and editions which must lead to a morbid intellectual condition. It is a sizeaby perceptible that works of real value are becoming more and more soons, new Mosleys, new Poss. What will the future be? Such men as Carnegie have in vain given millions for the creation of popular libraries; of what moral and intellectual use will they be. If their shelves are mine-tenths covered only with poor plagter and the properties of t

#### SCIENCE AND INVENTION.

#### SCIENCE IN AMERICA.

THE assertion of Mr. Carl Snyder in a recent number of The North American Review, that America's position in science is a distinctly inferior one, has attracted considerable atteation. We have quoted the salient parts of his article and also hard on his coworkers. And now comes The Popular Science Mentally, which amonutes cellorially that it takes "a more hopeful view of science in America" than that taken by either of these authors. Says the writer:

"Mr. Snyder, for example, commits the obvious fallacy of comparing the productivity of the United States with that of all other nations combined. We can divide the intellectual world into seven groups not very unequal in population-Germany-Austria, Great Britain and its colonies, France and Belgium, the United States, Italy, Spain and Spanish-America, Russia, and a miscellaneous group, iacluding Scandinavia, Holland, and Japan. The scientific rank of these groups is nearly that of the order in which they are given, but even greater credit should be allowed to the German, French, and English, owing to their smaller populations. The United States occupies pretty definitely the middle place, being outclassed by the three great intellectual nations, and surpassing any one of the three groups iato which the other nations have been divided. In so far as this is correct, we do approximately our average share of scientific research, about one-seventh of the work of the world.

"It is quite possible that our contemporary position is somewhat better in work actually being accomplished than in reputation. A scientific man does not usually become emineat until tea or tweaty years after his work has been accomplished, and the same would naturally hold for a nation. We are likely to think of Darwin, Pasteur, or Helmholtz, and to reproach America for not having produced their equal. But when these men were born and educated the population of the United States was comparatively small, and its intellectual position was admittedly inferior. It is only within the past twenty-five years that tracuniversities have developed in the United States, and positions have been opened that can be occupied by men carrying on scientific research. Those who first availed themselves of these opportunities are only forty or fifty years old, and while they are now doubtless doing their best work, it is not yet recognized outside the ranks of specialists. It is but now that our opportunitics for education and research begin to equal those of Germany, and twenty years must be allowed before the harvest can be gathered, and a still longer period before its quality and quantity can be established.

"A careful estimate of America's position in the scientific world must consider the different kinds of scientific work. In the applications of science we probably lend. We have had and have great inveators, and in the progress of eagineering, manufactures, agriculture, etc., where the individual is often nurse-originate, we are contributing more than our share. If further we divide the pure sciences into nise group—mathematics, automy, physics, chemistry, geology, zoology, physiology, botany, and antiropology-psychology—the United States would be doing several nations in mathematics, physics, themistry, and physiology; we are inferior in reputation, but not obviously so in performance, in soology, botany, and antiropology-psychology; we are probably doing work of greater volume and value than any other nation in astronomy and in geology.

The writer denies that oar form of government is detrimental to scientific work, in spite of the favor often shown by aristocracy in foreign countries to science, literature, and art. He says:

"The lack of a hereditary aristocracy and of a single national social center may not in the end be hurful to science. He scientific man is consulted as an expert and his advice is followed, he may be willing to forego invitations to dinner and to hepatronage of society. Members of the Cabinet and of the Congress had formerly more time to cultivate the society of men.

science than at present, and perhaps men of science could then also better spare the time. The scientific men under the Government are now more highly regarded than ever before. Some years ago they were looked upon as seekers after public patronage and viewed with a certain suspicion. Now they are treated as members of the Government, not less essential than officers of the army. In a recent debate in the Senate on the organization of a new department of commerce, no Seaator was able to say to what political party the present head of the bureau of labor belongs, but all agreed that his advice was of special importance lu framing the bill. When the Government employs skilled experts in all departments, it no longer requires the advice of an academy of sciences. We should like to see the National Academy entrusted with certain definite functions, and we should like to see scientific mea treated with even greater respect than at present, but on the whole the necessary conditions of a democracy and of an age of specialization do not seem to be unfavorable to scientific work."

#### IS FEAR MENTAL OR PHYSICAL?

THE psychological cause of fear is studied by Mr. Camille Melinand. In the Revue (Paris) he states that fear is of a complex antare, characterised by a sensation of painful emotion, of suffering, with a teadency to run away. The immediate cause seems to be physiological, because the heart beats more rapidly. The throat is constricted, and the limbs are, as it were, paralyzed. "The psychologist," says M. Mélinand, "thinks that fear is a sensition which produces these physical disturbances. It is the reverse which is true." A man whose heart does not beat hard ean not be said to be a fraid. He adds:

"The real order of things is not therefore what it is believed to be: (1) Vision of danger; (2) emotion; (3) corporal disturbances. It is really (1) vision of danger; (2) corporal disturbances; (3) emotion. . . . Therefore the true question is: What is the cause of these physical distarbances which create fear."

Following this line of argument, the writer states that the cause of fear is within us; in fact, if we are-ignorant of danger we do not fear it. Therefore fear is an idea which is always superinduced by expectation. For instance, we travel in a rail-way-car; we hear a rumbling noise behind us; we imagine that a collision will take place: we are afraid.

Cases of fear may be divided into four classes: Fear of death, fear of the aakaawa, fear of physical suffering, fear of emotions. We are afraid of joy as well as of pain; but the event which produces fear is always a shock, a physical or mental commotioa. The typical case of fear is that of the man, sentenced to death, expecting to be either beheaded or pardoned at any momeat. This demonstrates that the expectation of a shock creates fear, even if the shock is not painful. We are instinctively afraid of receiving congratulations, of facing an audience to be applauded, and the like.

The true sense of fear is the sense of hearing; we hear a suppicious noise and we are afrall. Sight has very little to do with fear, because when we see a thing we realize the exact nature of the danger. The sense of smell, however, particularly in animals, plays a large part in fear. The only thing accessary to produce fear is a shock, an intense surprise. The fact that we may be afraid after the danger is over, altho apparently contradictory, is readily explained. We simply realize the magnitude of the danger which we have escaped, and we go through the whole event in our minds, imagining what our sensations would have been. Then the shock is produced and we experience fear. To quote again.

"We find everywhere the fear of shock. Why are we afraid of death? It is obvious that it is on account of the immense shock which we think hidden behind this mysterious word-What scares us is the transition, vaguely inderstood, from life to death, the fall in tike dark, the violent shock. There is also the fear of the unknown, the fear of pain; but at the bottom there is the expectation of shock, . . . . . .

"The explanation will be readily nuderstood. On one side fear is a deep copporal trouble, an entemble of organic sensations. This is the first fact. On the other side, fear is instigated by the expectation of a shock. Now, when we expect a shock what happens? Precisely this—our whole organism prepares itself for this shock. Our whole being assumes the atttude that is the most convenient to repel it or to statist if with measured the state of the state of the state of the state of measured are most field so as to render the adaptation as perfect as possible. Hence the complex organic sensations of which fear is only a confused expression."

The author concludes by asserting that his hypothesis shows that man, like all human beings, is merely a creature of habit. Adaptation to our surroundings constitutes our normal state. "When this adaptation is perfect, when there is no rupture of equilibrium, no shock takes place. Therefore there is no fear." Translation made for TRIL LITERANY DIGEST.

#### EFFECT OF ELECTRIC WAVES ON THE BRAIN.

THAT the brain may act like the "coherer" used as a reciver in viroless telegraphy is asserted by Mr. A. F. Collina, who describes his experiments in *The Electrical World* and Engineer (February 22). Mr. Collina was first led to believe that the brain is sensitive to electric waves by the common assertion of nervous persons that they can "feel the electricity" of a distant thunder-storm. He says:

"Upon the barometric readings of an old gentleman I once knew, who foretold approaching storms with an accuracy equal to the best meteorological apparatus by means of his 'bad leg,' as he called if,' I formulated the opinion that the connection between the storms and his bodily self was real.—in fact, as real as the he and his enemy were connected by a metallic conduction.

"After observing the case just cited, I studied many similar ones, some less marked, others more serious, and finally one came nuler my notice that had a trayle ending.

"A little girl of eight years, residing in Germantown, n suburb of Philadelphia, during the month of August became apparently (rightened as the heavy disruptive discharges of an electrical storm approached, and as the terrific crashes sounded simultaneously with the flashes she was thrown into convulsions. and when a moment later the lightning struck a honse a quarter of a mile distant, the child expired. Now see: it was not the lightning that killed the child, and, in my opinion, it was not fright, but a deeper, far more subtle agency, and in this there is food for thought. The coroner did his duty in returning the verdict that her death was caused by 'shock and convulsions, due to fright.' On the surface of the post-mortem and in view of the fact that at the time nothing was known absolutely concerning the action of electric waves on brain matter, his statement was perfectly justifiable. The daily papers said the child was suffering from heart trouble, but this I ascertained was incorrect. I then formed the hypothesis that not only in this, but in every case the waves acted on the brain-cells first and the other physiological effects followed as a natural sequence; and I believed then, before I made the tests, as I do now, that the fright exhibited by the little girl was only an ontward physical expression of the change registered by the cells, and that the real cause could be logically attributed to the peculiarly strained tension of the brain matter, and that death was the secondary product of this result."

Mr. Collins's method of experimentation, which he describes in detail, consisted in measuring the electrical resistance of the brain before and during the impact of the electrical waves. The "coherers," or tubes filled with metal-blings, used in wireless telegraphy, become better conductors under the influence of the waves, owing probably to cohesion of the particles; and it was found that the brain substance seems to behave in the same way, Mr. Collins used the brains of dead animals and also of the human subject, and he experimented on a living cat. He states his conclusions as follows:

"From the foregoing results, I have tried to establish these facts () that electric waves emitted by lightning produce cohesion of the brain-cells; (2) that cohesion takes place in brain matter when in the living state as well as immediately succeeding death; (3) that cohesion of the brain is manifested physiologically through the nervous system and not by direct action; (4) that which is often defined as fear is due to the action of electric waves on the brain; (5) that the brain-cells are more violently affected than the brain-febers; (6) that this condition prevails when the brain-cells or the nervous system, or both, are in a state of disorder; and, finally, (7) that the long electrical waves propagated by the disruptive discharge of lightning may produce distinct symptoms, and which may, under certain conditions, result in death."

Commenting on Mr. Collins's result, The Electrical World and Engineer says editorially:

"It opens avenues by which the obscure subject of telepathy may be logically reached, as well as the possibilities in the horizon of electrotherapy. The only danger lies in drawing concluslons too hastily. Electric waves permeate all matter, except the best electric conductors. In permeating and traversing matter, these waves must produce some effect, however small it may be. The brain of an animal, regarded as a mass of material, is capable of being traversed to some extent by electric waves, and such waves as may traverse it must produce some effect in transit, however small the effect may be. The only question is, to what extent do the waves permeate it, and how much influence can they produce? The influence might be very considerable, and yet be of such a nature as not to become manifested, either objectively or subjectively. Or the influence produced by the electromagnetic waves passing through the substance of the brain upon that substance might be so infinitesimally small as to produce no significant effect.

After calling attention to the fact that the results may have been due to the experimenter's method of inserting metallic conductors into the brain to measure the resistance, the writer concludes as follows:

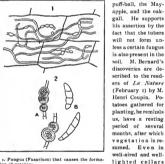

"We think that, broadly speaking, electromagnetic waves must produce some effect on the brain, and that possibly these effects may be very appreciable under certain favorable conditions; also that Mr. Collins may have observed some of these effects. Such experiments should be made with the greatest care. The more such experiments are made, and the greater care that is taken in making them, the more interesting and valuable the results will be. Meanwhile, If any persons are found to be in real danger of their lives from electric waves in thunderstorms, as Mr. Collins believes is sometimes the case, the right thing to do is to shut them up during the storms in a tightly closed metal box, with a grating ventilator, just as we shut up the receiving coherer in the neighborhood of wireless telegraphsending apparatus. We fear, however, that the demand for such thunder-storm electric shelters is not likely to be sufficient to render the business of their manufacture profitable."

Man as an Incarnation,—People of a materialistic frame of mind, to whom man is but a machine, says an ecitorial writer in The Hospital, are apt to put on one side all that can not be weighed and measured as not only inexplicable or nothinkable, but as quite beyond the range of reasonable discussion. Such people are advised to attend a meeting of the Society for Psychical Research for "a change of scene." What they will see is thus described:

"There they will find people, quite as convinced as they are of their own sanity, and quite as content as they can possibly be with the correctness of their own interpretation of things, assering the most astounding propositions, without turning a hair. To those who are so self-centred as to think that there is something cranky about all who do not see as they do, it is a wholesome awakening to had good, solid, comfortable, and respectable people believing in telepathy as a thing indisputable, and holding that man, as we see him engaged in his various more or less ignoble pursuits, in the city and elsewhere, is but the incarnation of one little bit of himself as he exists in an intangible and ethereal form. At the last meeting of the Psychical Research Society, Dr. Oliver Lodge, F.R.S., said that he did not hold that the whole of any one of us was incarnated in their terrestrial bodies; certainly not in childhood; more, but perhaps not so very much more, in adult life. What was manifest was only a definite portion of a much larger whole. What the rest was doing during the years spent here he did not know. Perhaps it was asleep; but probably, he said, it was not entirely asleep with men of genius, nor perhaps was it all completely inactive with people called mediums. Now to the modern materialist all this is absolute 'rot.' Yet Dr. Lodge is not exactly a man to poohpooh. Indeed, may not the immaterialists retort that this is a Christian country and that our very religion teaches us not to weigh and measure too exactly? Again, Roentgen, Tesla, and Marconi have of late been giving many shocks to old ideas. At any rate, this is clear, that we must not too rigidly put ontside the bounds of sanity belief in the unthinkable. It is a queer world, and which half of it is sane appears still podecided."

#### ARE POTATOES ABNORMAL GROWTHS?

HAT the potato is not a natural organ of the plant on which it grows, but is an abnormal growth or excrescence due to the action of a fungus, is asserted by M. Noel Bernard, a French botanist. According to this theory, the tuber belongs in the same class with the

s. Fungus (Fusarium) that causes the formation of potatoes.

2. Fusarium. g. Chamydospores; 3. spores.

the "eyes" develop and send ont stalks. Cultivators are careful to allow this first development to take place normally, for cultivation succeeds well only when these sprouted eyes are planted. For a period of thirty to forty days after planting the stalks grow, and put out leaves and flower-buds, while other buds in the lower part of the stalks push ont underground stems. In May the terminal buds of these stems cease to throw out sprouts. They become hypertrophied and form tubers in which the larger part of the nourishment sent to them is stored up. The aerial buds are now almost completely arrested in their growth. M. Coupin continues as follows:

where they are kept.

"We see that these two periods are characterized by two different modes of growth of the young buds. This must be attributed not to an alteration of condition in certain buds, but to a general modification of the state of the plant, of which the tuberculization of the terminal buds is the essential symptom.

"The causes of these modifications may be ascertained by a microscopic study of the roots. We shall see that in the second period these are surrounded by the filaments-the mycelium-of a fungus of the genus Fusarium. This is never absent. It also exists normally in the skin of the tubers, but not in the interior. This fusarium easily lives as a saprophyte in various culture mediums. For example, it infects dung rapidly and throughout its whole mass. It may be noted that frequently in the cuitivation of the potato dung is utilized by placing it around each seedpotato. This method, which is recommended by Parmentier, is evidently very favorable to the propagation of the mycellum.

"The roots of the potato are long and ramified and their development is very rapid; they grow in all directions away from the seed-tubercle; infection is consequently irregular. . . . regularity explains the irregularity noticed by all cultivators in the formation of the new tubers. M. Bernard desires to find out whether, by insuring an earlier and more regular infection of the roots, he would make the yield earlier and less variable. To this end he raised two lots of potatoes under the same conditions, except that to one he added the fangus in abundance, while in the other he allowed the roots to be infected only by some fijaments occurring at the surface of the tuber. In the former case he obtained a crop that was larger, earlier, and more regular. There is thus plainly a relation between the production of the tubers and the infection of the roots.

These ideas explain several facts relative to the introduction of the potato into Europe-facts that have never been fully cleared up before.

"It must be noted that the fusarium exists on the tubers but not on the seeds. Now the introduction of the potato into Europe was hy the tubers; by their means it was cultivated from the outset, and it seems that the method of cultivation by seed was not thought of until the plant was so largely grown and so highly esteemed that the production of new varieties was sought. At the outset, then, the fungus must have been introduced and acclimated at the same time as the plant. The history of the first attempt at growth from the seed is little known. Nevertheless there is in existence a document on the subject whose age gives it interest. Charles de l'Escluse, who was probably the first to cultivate the potato in Germany, at the end of the sixteenth century, and who aided in making it known by distributing tubers and seeds, reports in his 'Rariorum Plantarum Historia ' [History of Rare Plants] that 'we must rely, for the conservation of the species, on the tubers alone." The seeds that he sent to his friends spronted perfectly, but the plants produced flowers and no tubers. E. Rose, who cites this passage from L'Escluse's work, notes properly that it is of great interest. Nowadays things occur differently. Those farmers who make the potato a special object of cultivation use the seed, but generally the plants obtained during the first year have no tnbers and do not flower. A large number of the varieties that are now raised have thus originated from seed, and they, as well as the others, are found to be infected with the fusarinm. It was, then, only after the fusarium was acclimated as well as the plant that we could obtain from seed the result that we desired, and that the tuberculization appeared to be hereditary."- Transtation made for THE LITERARY DIGEST.

Do Animais Think?-Notwithstanding the tendency of recent students to deny that the mental processes of animals are in any way comparable to man's, L. T. Spragne answers this query in the affirmative in The Outlook (January). He says:

"Romanes, whose studies in this field have been most profound and comprehensive, has found unquestionable evidence that they [animals] possess every one of the emotional faculties of man, excepting those only which refer to morals. But others have even found traces of this, and Herbert Spencer, the great philosopher of evolution, while boldly denying religious sensibilities to all tribes of men, traces the genesis of religion itself. Indeed, evolutional psychologists now assure us that mind was born of feeling—in Huxley's phraseology there was an 'evolu-tion of intellect from sense.' Where now shall theologians draw the line below which soul is not? But however all this may be, we may fairly conclude with Romanes that 'there has been no interruption of the developmental process in course of psychological history; but that the mind of man, like the mind of animals-and indeed like everything else in the domain of living nature-has been evolved. For these considerations show not only that on analogical grounds any such interruption may be held as in itself improbable, but also that there is nothing in the constitution of the human mind incompatible with the supposition of its having been slowly evolved, seeing that not only in the case of every individual life, but also during the whole history of our species, the human mind actually does undergo and has undergone the process in question,' Nor is there any loss to ethics here, as some have feared. For at the very most, the psychological distance between us and those animals which serve and obey and fear us is not great as space and time are measured by the student of cosmology, and if it teaches us anything, the new science teaches us a broader charity, a loftier justice, and a deeper friendship toward our speechless kindred."

#### RIFTS IN THE POLAR ICE-CAP OF MARS.

THE changing polar caps of the planet Mars, generally believed to consist of ice or snow which melts in the warm season, have been known almost as long as the planet has been under telescopie observation. But it was not until 1854 that dark lines were noticed in the caps during their breaking up, and the plenomenon was not generally discussed until a dozen years later. Percival Lowell has been studying these "rifts" from his observatory at Plagstaff, Aria, and he contributes an account of his results to Popular Astronomy (March). Says Mr. Lowell:

"If the rifts were fortuitous phenomena they required no particular explanation. Lack of local habitation meant that the cap rested upon practically level ground, and its melting in one spot rather thau in another might be due to local variations of climate from year to year just as we have cold winters in America coincident with warm enes in Europe or vice versa. The moment it was recognized that the spots where disintegration advanced beyend that of its neighbors were always the same, it became clear that the character of the ground lay at the bottom of the transformation. The rifts were places where the locale for some reason or other favored an early disappearance of snow. The question then arose, what would favor such a state of things, and is a matter of physics and natural history. On earth a large body of water might account for it, or a lower tract of country. But bodies of water are excluded in the case of Mars; first, by the impossibility that bodies of water of sufficient shallowness to evaporate completely in summer should be solidly frozen during the long Martian winter, and, secondly, by the more obvious fact that long and slender lines, such as the rifts showed themselves to be, can not, by virtue of their appearance, be oceans or seas. Thought turns, therefore, to solid ground for an explanation, Here it stands confronted by an equal difficulty. If a lower level were responsible for the phenomenon, this would mean, in the case of Mars, a very considerable depression, much greater than it would mean on the earth. For to produce a difference in temperature of one degree a much greater height is necessary there than here. So much follows at once from the less mass of that planet. Warmth at varying altitudes on the surface of the earth depends, other things being equal, on the density of the air due to greater or less height above sea-level. The air simply acts the part of a blanket, and the lower parts of the earth's surface being the most provided with clothes are the warmest. A cooling which a mile of ascent would bring about on earth would take nearly three miles of travel skyward to accomplish on Mars, and similarly downward, for warmth, If, then, the melting along the rifts was due to the initial depth of these depressions they must needs be immense chasms, like those which the streets of our great cities are soon to become. If so, they could hardly fail to accumulate huge glaciers during the long Arctic winter night. Instead, therefore, of being the first places to melt, they would infallibly be the last. Difference of elevation, then, viewed as an explanation, breaks down when closely scanned. I pondered over this in the past and finally gave the problem up as insoluble."

But in the spring of 1891 it was discovered that in the place of the rifts, after the snow had melted, appeared the curious double lines generally known as canals. The identification, Mr. Lowell tells us, has been made a number of times, altho it is not a simple matter, by any means, owing to the "tilt" of the planet's poles. Says the author.

The fact, once seized, tells us something more about the rift. The rift has this self-evident characteristic, that the snow melts off it before the like happens to the surrounding land. It also turns out to be a canal in embryo. It therefore has the general characteristics of the canals. New all the knowledge we have been able to glean from their behavior about the constitution of the canals is that they are vegetation phenomena. They are seasonal in their habit and develop and disappear in the manner and at the time a flora would. The moment we look at the rifts in this light, the difficulty of interpretation vanishes at once. If there were strips of vegetation in the anidst of the desert that underlies the polar cap, such vegetation would make its presence known by appearing as rifts in the snow-field. Such would be the case for the following reason. The life of plants has this in common with the life of animals, that their vital processes both generate heat. The fact was not recognized as true of plants until long after it was well known of animals. Indeed, the discovery that plants give out heat in growing is of comparatively recent detection. It is now, however, just as certainly known as that all animals, even the most cold-blooded, do. Now mark what this entails. Plants can grow in the snow. Of so much we are cognizant on earth. Once started growing in the snow they help themselves to yet further advance, for the heat evolved in growing, instead of being wasted on the surrounding air, melts the coverlid of snow about them, and gives them greater scope for action. Once launched the process goes on in geometric progression. The launching is done by the simple arrival of the preper time of year. This compels the initial step. The recurrent warmth of spring melts the frozen coverlid a little, sets free the water the vegetation needs, adds the fillip of a more genial temperature, and the plant, feeling the favorable influence, responds and is quickeaed into life. After that it looks after itself. . . .

"Reversely, the identity of rift with canal affords further ground for believing that the canals are vegetal, that they are floral phenomena; and the corroboration is of considerable cogency, since the test of the truth of a theory is even more evidenced by its capacity to explain facts arising subsequent to its enunciation than by its fitting the facts known at the time of its promulgation. It is fashioned to snit the one; it is quite independent of the other."

Wireless Telegraphy's Latest Feat.—The daily press announces that the stemship Philadelphia, of the American Line, on her latest westwart try) across the Athantic, kept in touch with the wireless-telegraph station in England for more than 200 miles of her course. Intelligible messages were exchanged for more than 1,000 miles; but at the last the signals consisted only of the letter S—the same that was need by Marconi in his transatlantic experiments. Another steamer in the wake of the Philadelphia failed to receive the signals—after that shows, as Mr. Marconi asserts, that he has succeeded in making a transmitting Instrument that will affect only the one receiver to which it is "tuned."

#### SCIENCE BREVITIES.

A SIW form of arc-lamp invented by Dr. Hang, of Copenhages, and described in La Mairer, has holton carbons through which runs a current of water. They are thus kept cool, so that one may touch them without getting burned, while ordinary archight aerhous reseach a temperature of good. The energy waveful as host is thus much less, and the carbons are especially in the phototherapy of Dr. Pinsen.

ARTHURLI DIAGONIA.—"M. Moisan has already obtained very small diamonds," says closure, "by hearing carbon under very high pressures. Several chemists have endeavored to extend his experiments and to produce stones of commercial are. It is well known that they are employed in target quantities in drilling, and thus "property by the their chief tour, ments made by him along this line. He have described to the effect of the service of their gas, in an iron flast raised to a high temperature by the electric are. Bits the size of a pea were obtained, having the hardees and he crystalline form of a disarbond. The crystals had a gray titt that makes issuing.—"Transition sends for Tills LITHERAY DISEST.

#### THE RELIGIOUS WORLD.

#### IS THE BIBLE PRIMARILY A RELIGIOUS BOOK?

N "Divine Dual Government, A Key to Mnny Mysteries," recently published in London, the author, W. Woods Smyth, who is a fellow of the Medical Society of London, takes a very startling position from which to combat the evolutionary philosophy and the Higher Criticism. This position is that the Bible is not primarily a book of religion, but "a book of law, history, and philosophy, with a correlated religion." In this connection he quotes Charles Kingsley, who said . "My brethren, have you ever noticed that the Bible says very little about religion, and that it never speaks well of religious people?"

"Christianity," the author says, "is not a system of religion as commonly understood. It belongs as much to biological science, and to the science of law and government; and the reason why we have hitherto had no satisfactory system of theology is because the Bible has been interpreted from the standpoint of mau's naturally, but falsely, religious and pagan heart."

The author illustrates his view that the Scriptures form an unerring guide in medical and biological science by a study of the sanitary code of the Hebrews. He says

"The Mosaic code contained the most useful principles of our sanitary laws, and distinctly recognized the terrible microbe. Thus every vessel, with its contents, in the houses of the dead that was uncovered became 'unclean,' Then we have all procedures of notification and inspection, all the principles of separation and isolation, of aseption in the numerous washings and purification by water and by fire, and of antiseption in the use of perfumes and odors in the tabernacle and temple containing cinnamon and cassia, substances more powerful than eucalyptus, more effective than carbolic acid for diffused disinfection.

Again, the use of unleavened bread during the Passover is shown to be in accord with the precepts of modern medical serence. Bouchard is quoted to the effect that "the process of baking, althout has interrupted the fermentation of the dough, does not stop it altogether, and this fermentation reappears when moisture and temperature are again favorable to it; and from this are formed acetic and butyric acids, levein, tyrosin, and phenol." The author adds

"It is obvious that a complete interruption to the formation of elements like these, poisonons in their nature, must conduce to health; especially when we remember the degenerative changes which attend the prolonged use of yeast or leaven itself. Therefore we have good reason to believe that this legal enactment given by the Lord to Israel was designed, among other things, to prevent or arrest disease changes by the complete destruction of certain microbes, with the alkaloids they produce, at the critical period of the springtime of the year,'

It is, however, as a book of laws that the Bible stands preeminent, according to the author. By his theory of a divine dual government, both moral and legal, he attempts to explain, most of the problems which have vexed theology. Of the two "independent sciences," as Bluntschli calls law and ethics, Mr. Smyth writes:

"They arise nearly together, run side by side, are often in unison and harmony, and again often in opposition; and in the course of time, moral government lifts a section of mankind above all the strictures of legal government, while another section remains under its power. Hitherto the government of God has been regarded as under one system only, and has usually been expounded as a system of 'moral government.' This has had the effect of leaving many difficulties of Biblical revelation and of divine Providence, both in the course of human history and in the individual experience of every-day life, in deep mystery and without explanation."

The theory of "divine dual government" is shown to reconcile such conflicts as that between natural and revealed religion aud between leval and moral justice as exemplified in sacrifice and the Atenement. In the former discussion, an interesting passage occurs which sweepingly denies the conclusion of modern science that monotheism has evolved from polytheism. The author says:

"In the light of all the evidence accessible to our research, the honest mind can not accept any or all of the theories, he they whostly, mythological, or relating to other natural sources, as interpreting for us religious phenomena at the dawn of history. For a progressive evolution-in the natural order of eventsfrom polytheism to monotheism, we have no reliable evidence whatever-no, not in all the earth. Speculations of ancient philosophers at periods subsequent to the age of Revelation are not evidence inasmuch as the contact between the East and West is now known to have been much more intimate than was formerly supposed. Instead of progress, we have mostly retrogression, even to the passing hour, which witnesses idols, with eandles burning before them, in Auglican churches of London'

The author's conclusion of the whole matter is, that the Bible is not a distinctly religious book, because it touches upon every element in man's nature

"The whole revelation of the Lord when rightly apprehended gathers up heart and mind and soul, intellect, feeling, and emotion, into an offering made by the living fire of love, undying and unquenchable unto God.

#### CHRISTIAN SCIENCE IN GERMANY.

N the course of a recent debate in the Reichstag, writes the Berlin correspondent of the London Times, attention was drawn to the spread of "Christian Science" in Berlin, and a question was addressed to the Government with regard to the possibility of combating the movement by means of state interference. This incident has led to some discussion in the press. It is stated that the Berlin branch of the Christian Scientists' Association is presided over by two German ladies, assisted by two American and one German teacher, who deliver lectures on the doctrines of the association in English and German. The Vossische Zeitung (Berlin) has devoted a leading article to this subject. It is here given in full:

"Wonderful things, wonderful in the true sense of the word, occupied the attention of the Common Council vesterday. affair relates to various mental disorders which have become epidemic. There have always been children, fools, and especially women, ready to take oath of allegiance to the supernatural power of the new prophet and to place more trust in obvious umbecility than in sound sense. It can not, therefore, cause much surprise that the humbug of the metaphysical healing art ' should find its way from the New World to Europe and gain adherents even among so skeptical a people as that of the German capital. It is without precedent that a religious body of like character should find quarters in the municipal gymnasium. This has been the case in the 'Metropole der Intelligenz,' and there followed, in consequence, yesterday, in the 'Rothen Hause, an animated discussion concerning Mrs. Eddy and her adepts of this place.

"If the walls of the Charlottenburg Castle could speak, many interesting stories would be learned of how, with the cooperation of Frederick William II., the philosopher's stone was found, the elixir of life brewed, and Cagliostro exercised his arts. There was also a society in existence in William Street, where for fifty years spirits were exercised by signal victories of prayer, and the Prussian ambassador. Count Brassier de St. Simon, never sent his reports to his Government without first consulting his spiritual medium. A few earnest men have recently taken the trouble to expose a 'Flower Medjum.' Ye gods, to-day will an impostor be disposed of, and to-morrow will his successor find crowds of followers! Not once in official and court circles did table-tipping ever receive any encouragement: 'But, I swear to you, Excellency, the table moved,' insisted a courtier, one day, in response to the skeptical smile of Alexander von Humboldt. 'But, naturally, it followed the leader.'

"Here, what with table-tippings, spirit-rappings, and flying

ham-hones, together with the fourth dimension, affairs can no longer be properly transacted; every new miracle that is discovered finds credulous souls ready to be astonished. If legal proceedings have taken place in Berlin and Potsdam over the exorcising of demons and prayers for the dead, why should faithbealing be wondered at? Hysterical women and weak-minded men are not so rare as to preclude the possibility of witnesses appearing for the healing power of the new method. In many cases faith is shown to be an efficacious, if not a lasting, means against many cvils. It is, however, immaterial whether a mad woman believes herself cured, because a physician has kneaded her body with his knees, whether an imbecile at the bidding of a prelate goes walking barefooted in wet grass, or whether a novelty-mad person swallows a nostrum, or drinks sugar-water made after a Latin recipe, or is prayed over for diphtheria. The cases where the 'method' has been without effect or of injurious effect are not related. But where recovery results there springs up a new martyr for the 'Truth.'

The history of medicine as well as charlatanry is too rich in striking proofs of the power of faith or superstition even in enlightened times, to permit the hope that the time will come when new miracle-workers will cease to have a throng of followers. This hope must remain unfounded while mysticism is anialgamated with the material nature, as formerly with the 'Königsberger ' bigots and apparently now with the 'metaphysical healing art of the American woman, Mrs. Eddy. But how comes it that the city of Borlin should seem in some sort to accredit this new impulse by conceding to it the use of her houses? How is it possible that the director of a city gymnasium should not see through this charlatanry? How can a member of a school board be so unobservant to what is going on in the world as to learn nothing of such occurrences and not to put a stop to them? It is to be regretted that the municipal administration should have tolerated these disorders for months, thus rendering yesterday's

conference necessary.

However, faith-healing is now, as far as the municipal authorities are concerned, a thing of the past. There are no more rooms in Berlin grammar-schools for the 'spiritual healing cure.' The verdiet of the common council, yesterday, is a wholesome warning for the future, one that will perhaps have a desired effect upon the municipal officers. Eddvism prevails to-day in Germany as formerly did spiritualism or the water of Lourdes. It is high time that a halt was called. The Berlin town-councillors have done their duty. But physicians, teachers, the press, and all friends of enlightenment have still more than enough to do for the spiritual welfare of rational souls."

The Christian Science Sentinel (Boston), noting with satisfaction the spread of its tenets in Germany, declares:

"We shall patiently await the outcome in Germany, well knowing that when the Emperor and his subjects shall come to understand that Christian Science is none other than the true religion of the Gospels, is based wholly on the Word of God, and is but carrying out, in an especial way, the teaching and lifework of the Founder of Christianity, opposition to its establishment in Germany, as elsewhere, will cease.

We deeply trust that the Germans who are now opposing Christian Science will give its claims a fair and sincere investigation; that they will satisfy themselves of its wonderful healing and sin-destroying works; having done this in an understanding way, Christian Scientists will be content to abide the issue."

Mr. W. D. McCrackan, the well-known Christian Science propagandist of New York, believes that the unpopularity of Christian Science in official circles in Germany has been largely due to the attempts that have been made to induce the Emperor to confound it with "faith cure," "spiritualism," and "obscurantism" of various forms. Mrs. F. T. Seal, the principal of the Berlin Christian Science Institute, takes similar ground, and in a letter, to the Berlin Lokal-Anzeiger insists that "the teaching of Christian Science has not the least connection with what was formerly known as faith cure ((iesundbeten),"

Regarding the present strength of Christian Science in Germany, Mr. McCrackan makes the following official statement (in the New York Commercial Advertiser) :

"The First Church of Christ Scientists (Erste Kirche Christi

There is also a Christian Science reading-room, which is announced at all the services, and a Berlin Christian Science Institute. What is true of Berlin is true of other cities of the German empire, such as Hanover, Dresden, Heidelberg, Cannstatt, etc., namely. Christian Scientists have been entirely free to worship God as they saw fit. Since Christian Science practise consists of prayer, advanced to a realization of the omnipotence of God over all evil it is of course absurd to speak of making such prayer 'illegal.' When the subject of Christian Science came up in the German Reichstag the other day a word of deep wisdom was spoken by the imperial secretary of state, when he said: 'I earnestly warn against using the power of the state against such It is certain that whoever truly understands Christian Science can not but hope to see its benefits extended to all mankind."-" Translations made for THE LITERARY DIGEST."

des Scientisten), in Berlin, was organized some time ago with

the customary permission of the authorities, and the notices of

services are published every week in the Berlin newspapers.

#### ATTITUDE OF WAGE-EARNERS TOWARD THE CHURCH.

PROF. WALTER A. WYCKOFF, of Princeton University. whose chronicle of his eighteen months' experience as a day-laborer among wage-earners is still fresh in the public mind, has been giving his impressions on the religious attitude of workingmen, and he finds this attitude first of all one of indifference,

WALTER A. WYCKOFF. Courtesy of Charles Scribner's Sons.

-"an indifference which shows itself. among other ways, in an almost total neglect of church services." On this point be writes (in The Churchman. New York, February 16) :

"I am told that in the East End of London less than live per cent. of the working population ever enter a church. There may be a larger proportion of churchgoers among the wage-earners in the chief American cities, yet I should judge, from my own very limited experience, that, if any, it

is but little larger. We may accept it as indisputably true that the body of wage-workers are outside the church and completely indifferent to it. In contrast with this fact is the interesting one that the Roman Church has retained its hold upon those among the workers who have come under its influence.

But indifference is only one factor in the wage-workers' feeling toward religion. To this must be added an element of class sentiment. Professor Wyckoff declares that during his life among the workers he "received no impressions stronger than those that resulted from class feeling." He continues:

"Regarded from this point of view, the church is a 'capitalistic institution." A good thing it undoubtedly is for those who can afford it, but it is maintained by the well-to-do, and together with its religious features, it provides the facilities of a social club, in the atmosphere of which most working-people would feel little at home. In its sympathies, as well as its structure, it is essentially 'capitalistic,' and ignorant, moreover, of the real life of the people and of their hopes and aims. So think multitudes of the wage-earners.

"Indifference describes the attitude in general, and there is an

added prejudice on the part of those who are becoming self-conscious as a class, and finally there is open and bitter hostility to the clurrch among the relatively few who are frankly revolutionary in their views. Nothing in the present order of things so stirs the anger of the revolutionists as the presence of the church. He lates the existing political machinery as being a means of effecting the continued political slavery of his class, and he hates the capitalistic system as one of economic slavery, under which there continues a legal exploiting of his fellows, but, most of all, he hates Christanity as an organized hyporriay for effecting the intellectual slavery of 'the materialist conception of history' and 'the expropriation of surplus value,' his fight is a fight to the death with all capitalism and all supernaturalism."

The indifference and antipathy of the workers, declares Professor Wyckoff, can be overcome only by a "ministry of reconeiliation," which shall bring home to every wage-earner a consciousness of the fact that the church is his friend and is fighting his hattle. The writer concludes:

"Individuals are influenced in all manner of ways, but a class is reached only through its interests. Lord Rosebery once ventured the prediction that 'the politics of the future are the polities of the poor," and it is a no more hazardous prophecy to add that 'the church of the future is the church of the poor.' This does not imply the necessity of a partizan position in favor of wage-earners in all political and industrial issues; it is meant to point simply to the wisdom of recognizing the economic facts of the present and of acting accordingly. Most observers of the business world will agree that the combination of capital under centralized and efficient administration is become a necessary feature of modern industry. We may regret the necessity and we may favor a high degree of governmental control of centralized enterprises, but we are ceasing to doubt its inevitability. And yet there is equal necessity for the combination and organization of labor; and when we examine their history, we find that, in the growth of these groups of organized wage-earners, from rudimentary local democracies to national bodies under representative administration, and in their relations with organized capital, there are being worked out, not theoretically but actually, some of the most vital problems of our times,

"Here, without going further, are facts enough. The church that first recognizes then, and, with intelligent understanding of the needs involved, interests itself actively in behalf of organized labor, will accomplish much in winning back the allenged wage-earners and in fulfilling its mission of reconciliation in preaching the Gospel to the poor."

The Churchman, commenting editorially on Professor Wyckoff a article, expresses belief that the antagonism of the working class is directed not so much against religion or the church as against. "a perversion of religion and of Christ's ideal of the ehrrch." It continues:

"Are churchmen of to-day, as we know them, really in sympathy with the wage-carner, with his hopes, with his aims, with his outlook on life? Of course we all say we are, but to sympathize we must know, and to sympathize we must love. Where the wage-earner finds that knowledge and that love, the response is quick and hearty, as those who have worked in our settlements, cared for that work and learned to love it, know. There are, Mr. Wyckoff tells us, and our own experience would bear out the view, relatively few who are hostile to Christianity, fewer we should say proportionately than among the academically educated. The Anarchist may hate Christianity itself. His kingdom first and last is of this world and he hates all supernaturalism. But religion, in some form, however crude, is more apt to be a reality to those for whom life is real and carnest than it is to the dilettante, whether of letters or society. A large proportion, we believe the great majority, of these wage earners are religious in their way. They are looking for a church, but have not yet discovered that it is the church. Few will elaim that they are doing all they ought or can, to aid them in their groping. Till we do that, our claim of catholicity is an irony.

#### THE PAPAL JUBILEE.

THE beginning of the twenty-fifth year of the pontificate of Pope Leo XIII. has been celebrated with pomp and ceremony in the Vatican at Rome, and has been commemorated by the members of the Roman Catholic communion in all lands. It is considered an event of no little importance, in view of the fact that the Pope is now sincety-two years old, and that only two out of the long list of liss preducessors—St. Peter (according to tradition) and Pius IX.—have occupied the papal throne for so long

THE LATEST PURTRAIT OF THE POPE

a period. "History later will decide what rank Leo XIII. shall take among the great Popes," remarks the Rome correspondent of the New York San," the Papacy has known glories as immaculate, lights as brilliant, powers as fruitful, influences as strongly pervading. It has never had a Pope of gifts so universal." The same writer continues:

"Coming at the meeting-point of two periods, at the parting of the roads of a civilization whose lights and shadows date from the Council of Trent to the Council of the Vatiena, and also at the dawn of a period whose interests he wishes to turn toward a higher life, Leo XIII, is the Universal Pope. He is the 'direct' in all domains; there lie his distinctive character, his originality, and his greatness. As a diplomat he has brought about a new situation, which begins with the death of Pius IX, when almost all states held aloof from the Holy See and the church, and which ends with Catholieism at present in a prominent place. The Car and the Lutheran Pope have representatives accredited The Car and the Lutheran Pope have representatives accredited Vatican, and if Great Britain has not yet established official relations with Rome, sympathy has taken the place of perjodice in that country, and collaboration is substituted for onen loostlifty.

"In the United States the beneficent conduct of the Holy Father in the matter of Cahenslyism, the exhibitment of flue Apostolic Delegation at Washington, the amphictyonic attitude of the Pope during the discussion of the Faribault case, his moderating cooperation in the Philippines, the personal interest that Leo XIII. takes in the glorious development of American destinies, are all facts that denote perceptible progress. In Canada, Mexico he has prepared a plan of agreement the success of which would be a guaranty for the regeneration of that country. Through his reforms and through the National Congress of Latin

[March 15, 1902

America he has caused these republics, weary of a long period of marked, the decline or decay of a sense of sin against God is sterility and decadence, to bloom once more."

The London Weekly Register (Rom, Cath.) adds :

"The Holy Father, surveying his pontificate, has a retrospect of European peace, albeit distressed by rumors of wars, and by the war of Greece with Turkey, and of Spain with the United States. Throughout he has attempted to conciliate and to consolidate, to win back those who have left the fold, to establish the administration of the church within and its relations without, toward governments and the separated churches of the East. Certainly, the Pope has 'spoken out,' as the encyclicals on the social question, on Holy Scripture, and on Anglican orders sufficiently show. And, in such points as the revival of the Benedictines, with their traditions of learning and masculine piety. or, again, in the encouragement of historical studies, or in the preservation of the distinctive rites of the Orientals, upon which their stability in communion with the Holy See seems so largely to depend, we have evidences of a large spirit of rule such as only a great mind can conceive. It may be asked whether there are any signs of the streams of tendency in Europe setting toward Rome, whether the overtures of the Holy Father have evoked any response. It may be admitted that, directly, the results have not been considerable; but indirectly, as measured by the conservative reaction, which is not yet suent, there has been a slow revolution toward some important Catholic positious both in the spheres of thought and of action. The wide recovery of faith has been a remarkable feature of the past twenty years. The old crude hostility to Revelation has died out; a spirit of inquiry, of patient expectation, of a wish to believe, has replaced it."

If the Pope lives until 1903, the San Francisco Argonaut (Rom. Cath.) points out, that year will be to him one of extraordinary interest, as it will witness a triple jubilee. He will celebrate the silver jubilec of his pontificate, having been elected Pope on February 20, 1878; the golden jubilee of his cardinalate, having been proclaimed cardinal by Pius IX, in the Consistory of December to, 1851; and the diamond jubilee of his episcopacy, his consecration by the Archbishop of Damietta having taken place on February 19, 1843. Says the Philadelphia Press :

"To-day representing if the waste of frame a human attenuation that sublimates flesh and raises him above earthly things as the embodiment solely of mind and spirit, Leo XIII. takes his place in the very fore rank of the world's 'graud old men,' one of the human marvels of an epoch of which he has been a great part.

#### DR. CUYLER ON THE CHANGING IDEALS OF THE AMERICAN PULPIT.

DR. THEODORE L. CUYLER, of Brooklyn, who recently celebrated his eightieth birthday amid the congratulations of his many friends, has been asked by The Independent to give some account of the changes that he has seen in the American pulpit. His reply shows that he is by no means pleased with some of the developments in our churches, tho his tone is far from pessimistic. He writes:

"As far as I am familiar with the methods of our ministers in these days, I think that I discover some very marked changes since the days of my youth. In the first place, the average preaching in those days was more doctrinal than at the present time. The masters in Israel evidently held, with Phillips Brooks, that 'no exhortation to a good life that does not put behind it some great truth as deep as eternity can seize and hold the conscience.' Therefore they pushed to the front such deep and mighty themes as the attributes of God, the divinity of Jesus Christ, the nature and desert of sin, the atonement, regeneration, faith, the resurrection, and indement to come, with heaven and hell as tremendous realities. Especially they emphasized the heinousness and desert of sin as the great argument for repentance and acceptance of Jesus Christ. A lapse from that style of preaching is to be deplored, for, as Gladstone truly reone of the most serious symptoms of these times,

As one result of the modern failure to emphasize the doctrinal and personal side of religion, Dr. Cuyler detects "a decline in impassioned and fervid pulpit eloquence." The ministers of today seem to "aim at producing epigrammatic essays, to discuss sociological problems, and to address the intellects of their auditors rather than to arouse their emotions," Dr. Cuyler con-

"The great Dr. Chalmers 'making the rafters roar' is as much a bygone tradition in many quarters as a faith in the Mosaic authorship of the Pentateuch. I have often wished that the young Edward N. Kirk, who melted to tears the professors and students of Yale College during a revival there, could come back to us and tench candidates for the ministry how to preach. There was no stentoriau shouting or rhetorical exportation. But there was an intense, solemn, white-heat carnestness that grasped both head and heart, both the reason and the affection-that maile his auditors feel not only that life was worth living, but that the soul was worth saving and lesus Christ was worth serving, and heaven was worth securing, and that for all these things God would bring us into judgment."

May it not be true, asks Dr. Cuyler, that the decline in pulnit earnestness and eloquence is due to the rationalistic propaganda of to-day? On this point he says:

"It is rather a delicate subject to touch upon, but I am happy to say that in my early ministry the preachers of God's word were not hamstrung by any doubts of the divine inspiration and perfect infallibility of the Book that lay before them on their palpits. The questions, 'Have we got any Bible?' and 'If any Bible, how much?' had not been hatched. When I was in the Princeton Theological Seminary our profoundly learned Hebrew professor, Dr. J. Addison Alexander, no more disturbed us with the much-vaunted conjectural Biblical criticism than he disturbed as about Joe Smith's 'golden plates' at Nauvoo. For this fact I feel deeply thankful; and I comfort myself with the reflection that the greatest British preachers of the last dozen vears, Dr. Alexander McLaren of Manchester, Charles H. Spurgeon, Dr. Newman Hall, Canon Liddon, Dr. Dale, and Dr. losenh Parker, have suffered no more from the virulent attacks of the 'higher criticism' than I have done during my long and happy ministry."

Probably it is true that the pastor of to-day has to meet many obstacles that were not presented to his predecessors. He is surrounded, Dr. Cuyler thinks, by an atmosphere of greater materialism. The artificial arrangements of present-day society antagonize devotional meetings and special efforts to promote revivals. On Sabbath mornings "many a minister has to shovel out scores of his congregation from under the drifts (not very clean snow, either) of the mammoth Sunday newspapers!" Yet these obstacles are not insurmountable. Dr. Cuyler concludes

"Do these increasing difficulties demand a new Gospel? No; but rather a mightier faith in the one we have. Do they demand new doctrines? No; but more power in preaching the truths that have outlived nineteen centuries. Do we need a new revelation of Jesus Christ? Yes, yes, in the fuller manifestation of him in the more loving, courageous, and consecrated lives of his followers. A new baptism of the Holy Spirit? Verily, we do need it; and then our pulpits will be clothed with power, and our preachers will have tongues of fire, and every change will be a change for the better advancement and enlargement of the kingdom of our adorable Lord."

A STRANGE old custom was observed in the churchyard of Dorking, England, a few days ago, says the Episcopal Recorder (Philadelphia), when, in billerly cold weather, eight boys, selected by the rector and the church wardens, assembled around the grave of a former resident noted for his eccentricities, and standing bareheaded, with their right hands on the tomb, recited the Lord's prayer, the len commandments, and the Apostles' Creed. Mr. William Glanville, who lived in the village in 1750, ordered that he should be buried in a position facing the north, "six yards underground," and that a sum of money should be set aside for the purpose of paying poor boys son each to recite the above-named prayers over his grave on the anpiversary of his funeral.

#### FOREIGN TOPICS.

# ENTICING THE UNITED STATES INTO THE ANGLO-JAPANESE ALLIANCE.

THE broadsides of editorial comment in the European newspapers on the recent Anglo-Japanese treaty have occasional reference to the United States. Thus the Paris Temps says:

"The diplomatic system which this treaty contemplates requires a balancing element. That is the entry of the United States into the alliance. If the sympathies of the official world

THE ANGLO-JAPANESE ALLIANCE.
JOHN BULL (to the Mikado): "You climb up, I'll hold the ladder firm,"

-De Amterdammer Weebblad twer Nederland.
were alone in question, that would soon be accomplished. But the persistence and the strength of Anglophole sentiment in the masses must be reckoned with, and likewise the force of tho tradition of non-intervention to which Washington, Jefferd.

the persistence and the strength of Anglophobe sentiment in the masses must be reckoned with, and likewise the force of the tradition of non-intervention to which Washington, Jelferson, Mooree, Jackson, and Lincola attached their names—all this notwithstanding the progress of aggressive and conquering imperialism in the United States. Between an outright alliance and a benevolent, very benevolent, neutrality, there is all the difference that exists between England's old isolation policy and her treaty policy of today."

The Anglo-Japanese treaty is merely a game played by England for the purpose of entangling the United States with herself, declares the *Hamburger Nuchrichten*, but the game has not been very successful:

"If London had to reckon with the fact that the United States will hereafter repudiate British aims in East Asia, then Britain

must needs find a substitute for America and at once preclaim the news to all the world that the American loss might be made good by the Japanese gain. At first England's efforts, after her failutes in St. Petersburg and Berin, were directed out merely to a treaty with Japan, but also to make the United States a party to be rank: Russian Asiatic policy. The attainment of this end might possibly have led to aggressive action by Japan in Korea and subsequent warfare involving France or some offer Enropean Power. Thus the long-sought end of British policy, the acquisition of strength against Russia, would be attained. It may be that Berlin is well informed on this matter and as a result has successfully sought to frustrate English efforts.

English press comment lays stress upon the firm policy of the United States to refrain from entangling European alliances. The Spectator (London) regrets our isolation:

"Abroad the news of the treaty has been well received, and especially in America, whose countercal interests in Notes are as great as, if not greater than, our own. But the America untarially approves highly of our spirited lefense of the 'open door,' we notice no movement in favor of joining it and making a Triple Alliance in the Far East. That would have been an alliance indeed worth having, and worth making sacrifices to obtain."—Translations made for Tits LITERARY DIGEST.

# BRITISH COLONIAL PRESS ON THE BOER

THE loyalty of the British colonial press comment on the Boer war is very marked. Says the Colesburg Advertiser (Cape of Good Hope):

"Our dead we have buried. Our losses we have put behind us. To look back is but to mourn. Our future we must enter upon vigorously, cheerfully, and with a good will, and we shall have our share in the overcoming of difficulties and the entering upon an era of South African advancement at an early date such as has bad no equal since the Cape became a colony. Indeed we shall—those of us who are spared—see the South Africa we love thoth Dutch and English) taking its place among the greatest of Britain's great colonies, ranh'ug with Canada and Australia, a confederacy of nations, strong, prosperous, and independent.

Australian press opinion is equally emphatic. The Argus (Melbourne) represents the opinion of the island continent in its warm support of the Boer war. It said, among other things, reconfly:

"The British note was dominant in the speeches delivered at the Australian Natives' Association gathering yesterday. It was not a forced note. It came naturally out of the stirring circumstances immediately preceding the celebration-the extraordinary outburst of Anglophobia in Europe, the spirited defense of the imperial Government by Mr. Chamberlain, the defeat of pro-Boer intrigue in the House of Commons, and the patriotic demonstration by the over-sea English-speaking communities of the empire. The annual rally of the A.N.A. in Melbourne is the best opportunity in the Commonwealth for ascertaining what is the real sentiment of the native-born, and with such evidence as yesterday's proceedings before him, no dispassionate person can doubt Young Anstralia's devotion to the grand British flag. The native-born are as British in their choice of a national future as they are British in their inherited blood. So the King's representatives felt yesterday that they were the guests of loyal kinsmen."

Mr. Chamberlain's recent speech at the Guildhall evoked the following from The Cape Times (Cape Town):

"Mr. Chamberlain truly said that we were fighting, not so much on the issue of the franchine and of the breach of the convention, as for the security and very existence of our empire. Mr. Chamberlain's recent speeches will tend still truther to increase the grateful oradifuence he inspires throughout the empire — a confidence which has never been surpassed, or, perhaps, equaled, in the case of any British minister who ever held office.

The Canadian press is equally outspoken along the same gen-

eral lines. The tone of the British press in the Orient is no less loyal, the Kobe Herald (Japan) saying:

"The existence of a Boer goverument in the abstract sense may be recognized—Lord Roselery in his recent speech specially advised such recognition—but it must be as a government which has been beaten in a war of its own choosing, and a government which, in so far as administrative functions are concrened, does not exist, because it has nothing to administer."

An important note of protest comes from Goldwin Smith, who thus writes in The Weekly Sun (Toronto):

"When a worthy Canadian farmer reads of homesteads burned by the hundreds, of maltreating of women, of children dying in jestilence in prison camps, of men hanged for taking part with their kinsmen who are forced to witness their hanging; when he sees the præs gleefully reporting the weekly 'bags' of men who are fighting for their independence and who, at all events, have done him no worng, he has the natural feelings of lumanity. A reaction is setting in; not on the political platform or in the press, but in the hearts of the Canadian people, a

# PRINCE VICTOR NAPOLEON BONAPARTE TO THE FRENCH.

THE political campaign in France has been invigorated by a manifesto from Prince Victor Napoleon, the Bonaparitis pretender, in which he deals with all the sause upon which the French people are soon to vote. The Independence Belge (Brussels) observes.

"In accordance with tradition, the Prince begins by declaring himself in favor of the principles of the Revolution. The Bonanartes have always

> laid stress upon having it admitted that

the spirit of the Rev-

olution was embod-

ied in themselves,

as if the empire,

succeeding the con-

sulate and the re-

public, were not a

shameful distortion

of the revolutionary

spirit, a sudden

backward step

which all the re

actions supported

because it brought to the nobility and

the elergy the ear-

nest and henceforth

indispensable sup-

port of militarism.

The empire ereated

PRINCE VICTOR NAPOLEON BONAPARTF. and through that reaction think they can control the whole nation."

The Belgian paper declares that the manifesto will not help the Bonapartes:

"The pretenders have played out their part in French politics." They went into elipse with the lamentable end of the 'affair. The republic is to-day so happily consolidated that it can trumphantly withstand all the assaults of reaction. If the pretending still doubt this, the coming elections will furnish them splendid proof of it."

"To sum it all up," says the Petite République Française (Paris), the Prince "considers the work of the founder of his dynasty final and conclusive":

"The concordat? Perfect. Do not touch it. The financial status? Irreproachable. Beware lest we lay sacrilegious hands upon it. That which Napoleon I. has done is well done. What good would it do to change it?" "There is a little of everything in it," according to the Lanterne (Paris):

"Respect for the Concordat, mutual aid societies in opposition to government pensions in old age, the freedom of the father of the family and also the freedom of the workingman, threatened, it seems, by those who want to rescue the toilers from the horrors of the sweating system. Glorious anosate!"

The revolutionary Intransiglant (Paris) is not a bit more sympathetie:

"It must be confessed that this pretender has never been prodigal in declarations. He has certainly not come out of his natural reserve without urging from some high source: from the Jews, to begin with, whose ward he notoriously is; and, in the next place, from the ministry, of which all the members, from Lanessan to Caillaux, are implicated in the plot to bring us a Cæsar."

"His program is exactly what the Government condemns," says the Gaulus (Paris). The Solvil (Paris) thinks "the Prince's manifesto is confused and shows that he is not afraid to be self-contradictory." The Matin (Paris) observes:

"It is painful to truly liberal minds to have to note that the conquests and doctrines of the Revolution are menaced by the very men whom the Revolution called into political being. It is still more painful to note that it is an advocate of personal perwish recalls the lessons of the Revolution and gives them their application." Transitations model for The LITERANY DIORSE,

#### THE TROUBLES OF THE TRIPLE ALLIANCE.

N EGOTIATIONS for the renewal of the Triple Alliauce are resulting in embarrassment, according to *The Standard* (London), which notes, concerning this famous Itale-Austro-German combination:

"No one outside the three chancelleries knows exactly what these treaties contain, nor the precise dates named therein; but if Italian writers may be credited, they will expire on May 17, 1903, in the event of a year's notice having been given by one of the contracting parties; or, in the obsence of such notice, they will continue automatically for another term of five years. Acording to these statements, which are probably correct, the day that the statements which are probably correct, the partial will still be in the hands of the committee of the Rechange or under discussion in the House itself, but will certainly not have been decided either way.

"Will Italy renew the Triple Alliance?" asked Remsen Whitehouse a few months ago in The Atlantic. Here was his answer:

"Signor Zanatdelli, the present Premier, recently stated that the weights which are to decide that's course are not yet in the scales. These words would seem to imply that the considerations which evoked the pact of \$852, and prompted its renewal in \$62, either no longer exist, or are likely to be so altered in the immediate future as to necessitate a tecasting of fundamental principles or the abandonment of the agreement. In truth, the interests of at least one of the parties concerned have undergone radical alteration. The psychology of Italian home politics, as well as existing foreign relations, reveals in a measure the pressure which will be brought to bear upon King Victor Emmanuel's ministers next year."

This "pressure" is being applied in such Italian papers as the Patria (Rome), which said recently that the Triple Alliance was doing well for Austria and Germany, but not for Italy. It could do Italy no good in the absence of agreements relating to reciprocity in trade and tariffs. In reply to this, the Germa papers urge the value of the Alliance on general principles. Says the more or less democratic FrantFuter Tatisney:

"Notwithstanding the altered state of international relations, it would be premature to speak of a dissolution of the Triple Alliance. The Alliance has value not so much for itself as for its object—the maintenance of the peace of Europe,"

To this the Pester Lleyd (Budapest) assents, and even adds

that Count von Bülow was not serious when he said the Alliance was not absolutely necessary to Germany. Here is a typical French view from the Revue des Denx Mondes:

"Italy has been long enough in the Triple Alliance to be able to estimate it from the point of view of her own advantage. This is an appraisal that we shall not make with her. It is best that she make it all by herself. But we shall be surprised if, in the calculation of profit and loss, she finds the balance to be on the profit gide." "Translations made for THE LITERANY DUEST.

### VON BÜLOW AS EMPEROR WILLIAM'S

"IT is a matter of common knowledge that the Kaiser is his own Foreign Secretary, and that Count von Billow is but his parliamentary spokesman and diplomatic representative, who exercises no more right of discretion than the private secretary of one of our own public men."

In these words an anonymous writer in *The Contemporary Review* (London) refers to the present Chancellor of the German empire. Count von Bülow is indeed much belittled in the English press Just now. Says *The Speciator* (London):

"He is acknowledged to be a facile speaker, an adroit manger, and a man who comprehends his countrymen; but as regards the most important of his duties, the control under his master of foreign affairs, there is a widespread distrust of the soundness of his judgment, which recent incidents have increased. He found Germany fenced in with the good will of all the Powers but France, which when alone is powerless to disturb her, and he has helped to produce a situation in which, as we posted out a fortnight since, Germany is nearly isolated, felicity of statement, but there is some defect of inagination la him which forbids him to see the effect of his words or acts upon foreign opinion.

"A Bismarck in slippers" Count von Bülow is termed (by another anonymous writer) in The Fortnightly Review (London),

which devotes a whole article to him and thus compares the man with his predecessors:

"General Caprivi was better than clever. Prince Hohenbelw was other than clever. The fourth chancelor is clever mercy. Count von Billow has endeavored most sedulously to frame himself upon the Bismarckian model. He has striven in an utterly changed world to revive the Iron Chancellor's methods and to echo the phrases of the man of blood and iron. This reminds one of the not unknown delinsion of young men who imagine that they can write like Shakespeare."

"His florid and facetious personality and the fluency of his light rhetoric "are mentioned by the same writer, while still another hostile and anonymous English critic speaks in *The National Review* (London) of "those brilliant, witty speeches that delight the Reichstag at Berlin."

#### FRANCE ON HER OWN DEPOPULATION.

E VERY possible point of view is represented in the disconsistent of the depopulation or at least the stationary population of France. Great weight is attached to this utterance of the Economitte Français (Paris), over the signature of its editor, Paul Leroy-Beaulieu:

"The depopulation problem grows more and more pressing in France. In direct opposition to the fapts and to the theory nutered by Malthus in the last years of the eighteenth century and which he applied particularly to France, there is amongst ourselves to-day, in view of the absolute stagnation of the population for the past quarter of a century, and especially for the past ten years, great alarm leat it decline absolutely. . . The first ten praces and of the constant decrease in this rate. These things necessary is to ascertain the cause of the low birth-rate in France and of the constant decrease in this rate. These things are not due to poverty, to privation, one, beyond question to physiological reasons. They are the result of a simple psychological condition. The desire to limit the size of the family is the determining condition. This desire is itself connected with a standard of life: it depends, for one reason, upon the instinct

PRINCE HENRY'S VISIT TO AMERICA.

Punch (London.)-

of well-being, and, for another, upon ambition to do well for one's children. All democratic peoples attain gradually to its state of mind. There is the wish to lift the family in the socialiscale, and it is supposed, often errouecusly, that this lift is facilitated by the fewness of children. We have not now time to analyze at length and to prove a theory which we, neverthered deem well established, the theory that the democratic family ideal is responsible for the restriction in the size of family duel is responsible for the restriction in the size of tamily Most peoples of Western Europe (save Germany alone for exceptional and probably temporary reasons) and the United States

1880-1899, shown in four periods of five years each.

- The Contemporary Review (London).

of America and the Australian colonies, are gradually approaching our condition. Only they follow us at a considerable distance."

The measures which it is incumbent upon France to adopt are

The measures which it is incumbent upon France to adopt are thus set forth by M. Leroy-Beaulieu:

"There are two sets of measures which the state has ample right to take and which will certainly have a profound influence. It controls exemptions from military service and is a competent judge of substitutes for such service. Again, it may attack certain conditions, in one way opposed to morality or to the principle of equality, to the acceptance of recruits for the public departments and to the departments of the comporations to which it has granted concessions. By resorting firmly and permanently to these measures, appreciable results could certainly be obtained, the eight children, a thing that will always be unusual, but to impress upon the public mind the rule that a normal family comprises three children at least.

French population is only slightly increased by immigration, according to a writer in the *Journal Officiel*; and the *Journal des Débats* (Paris) says:

"It should be added that the various measures suggested would, in addition to their direct effect, show that the state appreciates the importance of the depopulation of the land and that it means to deal with the matter. Such measures would contribute to a rehabilitation of the family. Almost our entire literature is given up to description or defense of elegant libertinism, one would suppose no other subject was worthy of notice... The moral evil of which depopulation is one of the symptoms is thus accouract."

Opposition to measures of interference is manifested in many quarters. The Temps (Paris) says the effort to save France from ruin by depopulation may cause her ruin by methods of repopulation.—Translations made for The Literary Diess.

# AMERICAN VULGARITY AND THE

THE attempts of wealthy Americaus to buy their way into the coronation ceremoaies have been censured by the Manchester Guardian and other English papers. The Times (London) printed this:

"If it were known in England how certain Americans are using the coronation as a means of advertising themselves, such an order [forbidding the presence of unofficial foreign persons] would certainly be issued. Sensational papers here have been full of accounts of what Mrs. This and Mrs. That are to wear at the coronation. The New York Journal gravely asserted on Monday that the reason why the Kohi-inoor was to be set in Queen Alexandra's crown was because the Queen was afraid that the jewels to be worn by a certain wealthy American woman at the ceremony would outshine her own. The American in question was said to have ordered a coronet for the occasion similar to the Engineers lossphine's, to coxt Zayo, ooo."

This moves The St James's Gazette (London) to say :

"This worthy American dame is somewhat 'previous' if it be true she has a faready ordered a coronet to wear at King Edward's coronation' similar to the Empress Josephine's, to cost £350, oso. 'Such stern republican simplicity would be quite out of place at a gorgeous survival of feudal splendor like the coronation. It is clear, therefore that, so far as the actual service in the Abbey is concerned, the ceremony must be a strictly family party, to which even our own good cousins from over the water can not be admitted. We would rather welcome them than any hope they will show us their Josephine commerciate all the vest of it at other social gatherings aext summer; but the very limited space in our ancient shirtness at Westmisner must be kept for subjects of King Edward even if they should be unable to put a quarter of a million sterling on their heads."

Other English press notices of American "push" at the coronation are not so kindly. Thus Truth (London) says:

"The King, I am glad to note, has decided that Americans are not to be admitted to the coronation, even the they may come arrayed in gorgeous vestments and ropes of pearls and diamonds. The space in Westminster Abbey is limited. The pageant will be paid for by the British taxpayer, and until every taxpayer who may wish to view the ceremony finds a seat, there must be no admittance for the representatives—male or female of foreign shoddydom. There is the more reason for insisting a right to be present are offering to sell their tickets in New York to the highest bidder."

ADMIAL DEWIY AND PRINCE HEAVE, "German newspapers give promiinence to Prince Heavy's detail that he had written a letter of applong to Almial Hewey for his behavior in Oriental waters. "Pressuing prince," Other German wavepapers express annoyance at the "absurd story" that any such letter was sent. The Khens-Briddhick Jerlang says the legish to make trouble."

#### NOTABLE BOOKS OF THE DAY.

#### SOME ESSAYS ON AUTHORSHIP.

PEN AND INK. By Brander Matthews. Third edition, revised and enlarged. Cloth, 5 x 7% in., 277 pp. Price, \$1.25, net. Charles Scribner's

N most cases the love of a bibliophile for first editions is purely artificial, and, since these books are prized chiefly for their defects, wholly illogical. But in beholding this third edition of Professor Matthews's essays upon subjects related to authorship, it is as a reasoning being and not as a bibliomaniae that the reader is moved to desire a

BRANDER MATTHEWS.

copy of the first collection. The earher essays are by far the best. The little paper, " A Note on the Essay, which has been added to justify the publisher's claim of an enlarged edition, is particularly inconsequential.

The essays are divided by their nature, tho not by their author, into two classes; those which are technical to the literary craft, and those which are lightly discoursive of authors, literary euriosities, etc. The first sort are what a writer himself should make a book of; the second, what his iiterary executors should publish in response to public demand, and then only to anticipate collections even more haphazard which may be made by the book pirates. It is true that the latter class of

essays form most delectable magazine provender, chiefly because of able selection of quotations and personalia; yet such matter does not stand reprinting. When, in an essay such as "Two Latter-Day Lyrists," Brander Matthews has introduced us to the charming poets, Frederick Locker and Austin Dobson, it surely is a greater compliment to the professor that we hold converse direct with Locker and Dobson thereafter than it is to ask him to repeat his introduction.

The essays of Professor Matthews which, for their intrinsic merit, deserve preservation in book form are: "The Etbics of Plagiarism,"
"The True Theory of the Preface," "The Philosophy of the Short Story," and "The Whole Duty of Critics." No one beginning the career of authorship can fail to profit by the metes and bounds which are established in the first for the safety of the assimilative writer : the shrewd hints of the second as to the best way in which to steer the powerful yet easily prompted critic; the essential difference shown in the third between the sketch and the short story (upon the discovery of which difference Professor Matthews rightly plumes himself); and the Twelve Good Rules for Reviewers laid down in the last, which are, by the way, those according to which the present criticism has been constructed.

#### THE APOTHEOSIS OF GOODNESS.

THE METHODS OF LADY WALDERHUNST. By Frances Hodgson Burnett. Cloth, 5 x 7% in., 324 pp. Price, \$1.40. F. A. Stokes & Co.

T will not be for its plot that "The Methods of Lady Walderhurst" will find many admirers. The plot is an old one, and one that Mrs. Burnett has used before : the person raised unexpectedly to

rank and fortune, who is plotted against by those who wish that fortune for themselves. For this end Mrs. Burnett has introduced into her story a villainous heir to the title of Marquis of Walderhurst, his Anglo-Indian wife, and her devoted the murderous Ayah, a spectral person who flits through the story on dark nights, elad in white, and in whom the reader finds it rather difficult to believe. When Emily Fox-Seton, beroine of "The Making of a Marchioness," finally becomes Lady Walderhurst, there arrives from India Lord Walderhurst's rascally cousin, Captain Osborn. His wife manages to ingratiate herself in the graces of Lady Walderburst, whose husband is called away to India on an important mission. Soon after his departure, Emily dis-

MRS. FRANCES H. BURNETT.

covers that there is to be an heir to the title. The Osborns, whom she confides In, are furious, and, with the Ayah's ald, make various attempts on her life. She is saved partly through the devotion of her maid and partly through the repentance of Hester Osborn. There is nothing especially new in all this, but it is told with Mrs. Burnett's usual charm, What raises the story to a high level is what might be called the subpiot, which in fact is the real motif of the story; Emily Walderhurst's heroic devotion to the commonplace man she married. It made littie difference by what artificial means she was made to show this devotion, or through what triais Emily went. The self-sacrifice, the devotion, is what rings true. Mrs. Burnett has a way of making one sympathize with her book-people; many will find Emily Walderhurst the best piece of character drawing she has yet accomplished. She is the apotheosis of the commonplace and homely virtues, simple goodness, large sanity, gratitude, raised to so high a point that we have a heroine of a great stamp in this woman of the "Mid-Victorian Era." To make a heroine simply good, to admit that she is stupid and yet to invest her with a charm dependent on her very goodness and stupidity, is an unusual piece of work. Emily Walderhurst stands ont among the subtleminded heroines of the present day with their tortuous characters. She stands out also among her companions in the book. Lord Walderhurst, Lady Maria, Dr. Warren, Jane Cupp and her mother, and Hester Osborn, are all good pieces of character drawing. They correspond to a certain class of actors on the stage who do character work, who win our approval and applause, but whose art is of the obvious sort that does not permit itself to be forgotten. Alee Osborn and the Ayah, however, have strayed from the world of melodrams. In the chapter before the last Mrs. Burnett attains her highest point.

It was a dangerous chapter to write, with every opportunity for slopping over. So simple and true is the tone that one regrets all the more the last chapter where the loose ends are all caught up and tied together with a flourish.

#### A WORK OF NOBLE SPIRIT.

CULTURE AND RESTRAINT. By Hugh Black. Cloth, 5% x8% in., 350 pp. Price, \$1.50 net. Pleming H. Revell Company, New York.

'HIS volume is a discussion of the deeper problems of life by the Scotch clergyman, Dr. Black, the author of "Friendship." as its title indicates, a consideration of the two great ethical ideals, that of culture and that of self-sacrifice, the spirit of Hellenism

and the spirit of Hebraism. In the words of the author, "This book is an attempt to do justice to both, to find a great reconciling thought which may combine both."

As a contribution to the philosophy of ethics the work can not be regarded as important. Dr. Black's reconciling thought is that the two ideals are really two sides of the same shield; that self-restraint is the seeking of a higher self-development, and that the ideal of seif-culture is really an ideal of service. This is true enough and worth saying, yet hardly sufficient matter for a volume of three hundred and fifty pages. The anthor is not content with proving that it is true; he feels the need of showing that it is orthodox. He

wishes to demonstrate that this truth

HUGH BLACK

was known from the first days of Christianity, and constituted in fact the very essence of the system. He may find little difficulty in convincing bis modern readers, but we are not so certain that he would have found no difficulty with the early Christians. They would have been apt to maintain, we believe, that the ideal of culture is an ideal of service only in so far as it helps other men to culture; and that the object of life is neither any man's culture nor all men's, but the casting out of sin and the death of self.

The strength of this book, however, is not in the keenness of its logic, but in its moral tone. It is the work of a noble spirit, animated by a deep and sincere devotion to what is best; there is much in it that is beautiful, and it manifests on every page a love of the great books. It is unusual to find so much real and broad devotion to culture in combination with such earnest Christian piety; and we have no doubt that this book will be of assistance to many who are still in need of conviction upon the question at issue.

#### LEGENDS OF AN ABORIGINAL PEOPLE.

ZUNI FOLK TALES. By Frank Hamilton Cushing. Cloth, 61/2 x 95/1, 474 DD Illustrated. Price, \$1.50. G. P. Putnam's Sons.

THETHER or not scientific men are glad when a writer seems to interpret some manifestation of an aboriginal nation's spirit, at least the public ought to be glad-provided the spirit is of in-It is possible that an anthropologist might take exception to Mr. Frank Cushing's translations of the folk-tales told to him by priests when he was living among the Zuni Indians. Mr. Cushing's accounts of the Zunis have had already to run the gantlet of scientific criticism and have not come forth altogether unscathed. It is a curious fact, however, that one of these criticisms is to the effect that Mr. Cushing's literary style is too elegant to represent accurately the life among the Indians. This is very likely; but, on the other hand, it is not always that your Indian narrator conveys the real spirit of his people's stories.

FRANK B. CUSHING

the legends of the tribe are handed down as traditions from one generation of yarn-spinners to another, just as there are bad and good story-tellers in civilized life; and to set down with stenographic accuracy the words which fall from the lips of some particular old Indian squaw or priest is not necessarily to give to the world the best rendering of a legend. If Mr. Cushing has sufficient knowledge of the Zum character to eke out one story with another without drawing on the white man's mode of thought. then he does better service than the man who merely transcribes a tale as he hears it.

Whether Mr. Cushing has interpreted accurately the spirit of the Zuni story-teller but one or two white men who are also writers are

competent to judge. It may be that he has ennobled the loftier thoughts of the Zuni and eliminated the grosser ones. Whether he has or not is of interest mainly to ethnologists. To the general public the question is, Are these Indian legends interesting apart from their value as curios, and has Mr. Cushing presented them in an interesting manner? Both these questions may be answered in the affirmative, Mr. Cushing has made his Indian stories about as attractive as Mr. Jeremiah Curtin has made the old tales of Ireland and of Russia, or as Mr. Henry M. Stanley has made his folk-tales of Africa; and every one knows that the American Indian's Imagination is vivid and picturesque. The first of Mr. Cushing's tales-the fate of whose hero is not dissimilar to that of Orpheus—has that rare quality that we are accustomed to associate with Hans Christian Andersen's stories. There is an exalted beauty also about the second story, of the youth who loved an Eagle maiden, went astray in a passion for Death, and just failed to win the forgive-ness of his wife, who destroyed him. In the other stories there is much beauty, some brutality, and much that does not give the reader a lofty opinion of the red man's honesty. But it is interesting to note that the nemesis theme is the basis of most of the tales.

#### BUILDING A NEW FAITH.

THROUGH SCIENCE TO FACIN. By Newman Smeth. Cloth, 5% x 85 ln., 282 pp. Price, \$1 50. Charles Scribner's Sons, New York.

WORTHY task yet awaiting completion for the Christian philosother is to seize the materials of the evolutionary specialist and build from them the fundamentals of faith. Such a faith, that shall coincide with, and not contra-

dict, the new order of intellectual life that has arisen in the world, is certainly demanded by the hearthunger of our modern civilization. And it is this kind of faith toward which this book leads.

It is not Dr. Smyth's first contribution toward the final harmony of faith with science. This partieular work recalls his "Old Faiths in New Light," covering indeed, by a very different process, some of the ground traversed in that earlier work.

The substance of this book constitutes the Lowell lectures delivered in Boston in 1900-1901. are an attempt to set forth the matelligent, moral, esthetie, and spiritual aspect and bearing of the evolu-

tionary hology. The argument is massive and finely knit together, It begins with the modern view of the genetic unity of the cosmos, and deals with evulution as a progressive self-revelation to man, that iucreases with the increase of the percipient creation. The leading proposition that evolution is a directed and rational process is worked out without much reference to the question of the point of its beginning. Where we come upon it, and along the midway path, where we can observe it, it shows an idea "It is like a process of thought." This

intelligent direction of the evolutionary process the author traces through the coordination of the functions and uses of the cell, in a chapter that might stand as a germ for a complete cytology. He shows that before there was any selection there was and must have been direction. In the constitutive structure of the cell lies the complete account of what it does and becomes. The principle of the division of labor in natural processes begins in cytological processes. That these directive aspects of evolution are intelligent is seen in their ordered character from the lowest physical elements up to the highest rational products of man. Orderliness is in fact co-orderliness, in which all life fits together for mutual service. Evolution exhibits increasing vital values, its intelligent direction being further assured by its limits, such as the fixed properties of cells, and the mutual relations of service that one organism is bound to render to another. This increase of vital values is the chief proof that evolution is also moral. The Infusoria are near to the zero point of moral possibility as being capable only to a minimum degree of self-response to stimuli. Chemical reaction is below this zero. But the course of evolution has been a steady increase of sensitiveness, and therefore of pleasure and happiness. The utilitarian theory of beauty in nature is inadequate, the final account being that the beautiful is part of nature's intelligent constitution. course of evolution has always been with man in view. With him physical evolution comes to a halt, and, having exhausted itself on that plane, begins a new course on a higher. The fersow, individual man. lifts up into himself ail the lower universe, while he transcends it. While evolution up to this point has held the individual contributory to the species, with man this intent is reversed. Life now has all at stake in the perfecting of the individual; in the "continuance of the person This conclusion furnishes some basis for a belief in personal immortality, where evolution, that always tends to complete itself, shail accomplish the individual destiny in higher environment.

A convenient index and copious foot-notes add to the value of the work for those who might wish to follow out the author's biological hints for themselves

#### A KNIGHT OF THE ROAD.

AT LARGE. By E. W. Hornung Cloth, 7 \$ 5% in., 368 pp. Price. \$1.30. Charles Scribber's Sons. New York.

OTHING commends an unread book more than a favorable regard for the author. Mr. Hornung has invented one " Raffles, a delightful burglar to whom England and America have thrown open their doors. He was so entertaining in "The Amateur Cracksman" that, altho he seemed to have met his finish in that chronicle, he had to be revived for more deeds of astute larceny.

In this latest novel, "At Large," Mr. Hornung takes a breezer type of robber, the footpad. "Sandown," the Australian bushranger, is a worthy successor to Dick Tur-

pin, and to that "perfect gentleman," of the King's Highway, Claude Duval. A young Englishman who had gone to Australia to "make his pile" so that he may wed the girl at home that he loves, meets Sundown, who robs him of all that he has in the world. The despair of the poor lad makes his despoiler do one of those bookish acts of generusity which beseem the truly dashing types of his class-he returns the money to his victim.

This is all of Australia and bushranging there is, for in the next chapter, four years later, Dick Edmonstone sails back to " Merry England" with enough to get married on. Then the trouble begins. Of course, in a detective story, the

kindly critic must not dull the keen edge of a reader's enjoyment by revealing the plot. But the very title insinuates that "Sundown" has a leading rôle. He is very much " At Large " in England, and the debt of gratitude Dick owes him for sparing money which was the nest-egg of his fortune is repaid in a singular way.

There is plenty of excitement, and poetic justice in the end. Sundown is like Longfellow's little girl in that he is "very bad," on his professional side, and pretty good when the human strain in him is moved to action. He is not up, however, to the fascinating Raffles.

It is a good book of its kind-the kind being that which you take as on do your luncheon, not looking for much and not exacting the chef's nublest efforts

MEMORIAL to the late Sir Walter Besant has now been definitely decided upon, and will take the form of a medallion-crypt, designed by George J. Frampton, in St. Paul's Cathedral, London. The plan to creet a memorical bust of the author of "Lorius Boone" in Exeter Cathedral has also been successful, and will be carried into effect in the near future.

CURRENT POETRY.

#### Aubrey de Vere.

### By EDMUND GOSSE

(Born, January 10, 1814; Died, January 20, 1922.) In the far romantic morning where the giant bards together

Ringed with dew and light and music, struck their lyres in golden weather. Came a child and stood beside them, gazed ador-

ing in their eyes. Hushed his little heart in worship of a tace so bland and wise.

They are gone, those gods and giants, caught Elliab-like to glory.

And their triumphs and their surrows are a part of England's story ;

Years and years ago they vanished; but the child, who loved them well

Still has wandered among mortals with a tale of them to tell

struction papers early applicants

a School of Correspondence, Boston, Mass., U.S.A.

# We Would Give \$50.000 Cash

if the people of the United States could in some way be made to realize that the greatest offer that has ever been made in real estate, or probably ever will be made, is embodied in our proposition to sell a lot in New York City with all city improvements for \$480-because if the situation were actually understood by every person in the country there would not be one single foot of property left twenty four hours after this knowledge was brought to their attention.

We are selling lots for less than \$500 which are intrinsically worth \$20,000 if you will take into consideration the three elements which have gone to make up values in New York City outside of fashionable districts:-distance from the center, transportation facilities, rate of fare.

The difference is, the \$20,000 lot had transportation to it several years ago, and now is surrounded with houses costing an average of from \$10,000 to \$40,000 apiece, while our land, which has only now just secured this improvement and transportation, must wait until the people realize that these have been secured, and until the solidly built portions (now so comparatively close to us) have reached and enveloped us, and actually brought the values where they rightfully belong.

Illustrations: Lot on corner 146th Street and Third Avenue, New York City, worth in 1881, \$1,500, sold in spring of 1901 for \$70,000 to Henry Lewis Morris. His grandfather sold it for \$155 in 1851. Lot on 80th Street, opposite Central Park, sold in 1850 for \$500, in 1901 brought a price that showed Increase of \$500 every to days from 1850 to 1901. (Authority, Real Estate Editor New York Sun.)

Corner of Utics Avenue and Linden Boulevard, Rugby. Every improvement you see has been made within 6 months

This increase will be maintained as surely as New York is destined to grow. As surely as equal transportation makes equal values, so surely will this lot be worth as much relatively as the lot in upper Manhattan.

We can prove it if you come to New York. We will try to prove it if you will send us your name and address. Is it not worth your while? We ask nothing of you except a letter or a postal. If we were sure you were in good earnest we would far rather say, send us your name and we will send you tickets to New York. This you know is obviously impossible, but if you will let us put the matter before you we will in some way prove that our proposition is a sound one, if we have to bring you to New York to do it.

What we want is to have you know that we are honest, and that every statement we make is incontrovertible truth. Then we are absolutely certain that we can do business together.

We sell a \$480 lot for \$10 down and \$6 per month. This carries a life insurance, a guaranteed increase of 20 4 in one year, a free round-trip to New York (east of Chicago, or a like distance), all improvements, your money back with 6 % interest if not found as represented. What more can we do? Now, will you send us your name?

THE NEW PSYCHIC STUDIES. In their relations to Christian thought, By Franklin Johnson, 12mo, 75 cents, FUNK & WAGNALLS CO., Publishers, NEW YORK.

THE GREATEST OF ALL CHURCH PROBLEMS WHY MEN DO NOT A hold, vigorous, and fair minded discussion. By Rev Cortland Myers, 16mo,80cts FUNK & WAGNALLS CO., Pubs., NEW YORK.

Theirs were voices heard like harps above the congregated thunder: His, a trembling hymn to beauty, or a breath of

whispered wonder; When the world's tongue spoke his vanished; but

below the turmoit rolled Frayments of romantic ranture, echoes of the age of gold.

Others stun the years to homage with their novelty and splendor;

He was shy and backward-gasing, but his noiseless soul was tender.

When he sang, the birds sang louder, for his accents, tow and ctear, Never bushed a morning cushat, never scared a

sunning deer. Now the tast of all who communed with the mighty men has perished;

He is part of that eternity he prophesied and charished .

Now the child, the whisperer passes; now extremity of age Shuts the pure memorial valume, turns the long

and stainless page. Where some westward-hurrying river to the bright Atlantic dashes,

In some faint enchanted Celtic woodland lay this poet's ashes,

That the sonls of those old masters whom the class of song hold dear May return to hover nightly o'er the grave of

#### PERSONALS

Three Prize Stories,-The Sunday magazine supplement of the New York Times prints each week a series of apecdotes by or about wellknown men, under the caption "The Man in the Street." The authors of the three best stories are awarded a prize. The following three stories were chosen from a recent issue of that paper :

s. Presiding Justice Van Brunt of the Appel-late Division of the Supreme Court is a man of rare good humor, and yet withal a judge who can call an offending lawyer to account in a manner that he is not likely to forget. The presiding justice met his match, however, in a vonng lawyer who appeared befere his angust bench last week

It was a simple cause that the young lawyer pleaded, but his heart was in it and he believed that he was entitled to a reversal of the verdict that had been rendered against him. He was armed with all the authorities, and he quoted from them copiously. The honorable justice yawned as he presented his case in this elemental fashlon

"Pardon me," interrupted Justice Van Brunt after a time, "but I would suggest that you get down to the merits of your case."

"Presently, your Honor, presently," responded the young lawyer, with furensic elequence, yet he centinued with renewed carpestness to expound the law as he saw it.

"Let me anggest to yeu," said Justice Van Brant, interrupting again, "that you get down to the merits of your case and take it for granted that the court is familiar with the elementary principles of law."

"No, your Honor, no," declared the young lawyer, with absolute sincerity, "That was the mistake that I made when I argued this case in the lower court."

s. "Speaking of boastfulness born of pride in home," saya Hamilton W. Mabie, "I was once in smoking compartment with a man from New York, another from Chicago, and another from New Jersay. The New Yorker was boasting of the Empire State Express, which he said went so fast that the telegraph poles slipped past seemingly as close together as the teeth in a fine comb.

"'That's nothing,' said the man from Chicago. 'There is a train from my city to Milwaukee, Nothing like it. I started to cross a bridge on the road and heard the train coming. Having great presence of mind, I made a leap in the air and the train was gone when I came down,"

"'That's a fast train,' said the New Jersey citizen. 'The Jersey Central flier is equally fast, but makes better time, because it starts fast. My wife was on the platform to bid me gond-by in lersey City. I opened the window te kiss her, and by the good name of the land of mosquitoes I kissed a strange woman standing on the platform at Mawark

2 J. Pierpont Murgan is the here of an anecdote repeated at a recent meeting in the headquarters of the Steel Trust, and if not apocryphal. illustrates a bent of humor hitherto unapapected in the banker.

While in London he visited the Bank of Reg. land with a large currency note for which he wished to obtain gold. The feller caamined the nete and handed it back,

"You have not indersed it," said be, glad of an apportunity to occupy an attitude.

"In this not payable on demand?" asked Mr Mergan, simulating surprise,

"Yes, if indorsed "-haughtily. The magnate frowned, "I am very careful whose notes I indorse," said he, with mock severity.

"Do you challenge the Bank of England?" MacDonald-Heyward Co.,

#### FRIED ONIONS

#### Indirectly Caused the Death of the World's Greatest General.

It is a matter of history that Napoleon was a gourmand, an inordinate lover of the good things of the table, and history further records that his favorite dish was fried oulous; his death from cancer of stomach it is claimed also, was probably caused from his excessive indulgence of this fondness for the odorons vegetable.

The onion is undoubtedly a wholesome article of food, in fact has many medicinal qualities of value, but it would be difficult to find a more indirectible article than fried onions, and to many people they are simply poison, but the onion does not stand alone in this respect. Any article of food that is not thor oughly digested becomes a source of disease and discomfort whether it be fried onlons or beefsteak.

The reason why any wholesome food is not promptly digested is because the stomach lacks some important element of digestion, some stomachs lack peptone, others are deficient in gastric juice, still ot bers tack hydrochloric acid.

The one thing necessary to do in any case of poor digestion is to supply those elements of digest which the stomach lacks, and nothing does this so thoroughly and safely as Stuart's Dyspepsia Tableta

Dr. Richardson in writing a thesis on treatment of dyspepsia and indigestion, closes his remarks by say-ing, " for those suffering from acid dyspepsia, shown by sour, watery risings, or for flatulent dyspepsia abown by gas on stomach, causing heart trouble and difficult breathing, as well as for all other forms of stomach trouble, the safest treatment is to take one or two of Stuart's Dyspepsia Tablets after each meal. I advise them because they contain no harmful drugs, but are composed of valuable digestives, which act promptly upon the food eaten. I never

which act prompay upon an stod cases. I serve knew a case of indigention or even chronic dyspepaia which Stuart's Tableta would not reach." Cheap cathartic medicines claiming to cure dys-penia and indigestion can have no effect whatever in actively digesting the food, and to call any cathartic medicine a cure for ladigestion is a mis-nomer.

nomer.

Every druggist in the United States and Canada selis Stuart's Dyspopaia Tableta, and they are not only the safest and most successful, but the most scientific of any Ireatment for indigration and stormach troubles.

# BRIGHT'S DISEASE AND DIABETES IN LIFE INSURANCE

Thousands of men are now in danger from Thrusands of men are nowin danger trom these diseases without knowing it. This is not an alarmist claim, but a serious and provable fact. Vear after year the number of men who are terrified by learning, on ap-plying for life insurance, that they are vic-tims, is ecormous. They had no half of their condition, until the rigid examination re-

This stealthiness is the terrible feature of

Yet these diseases are curable. Our treat-Yet these diseases are curable. Our treat-nent has brought radical and permanent ture to a host of cases for whom the best obspacians could do nothing. The patients have been mainly persons of culture and aducation. Their testimony makes doubt

impossible.

Our single aim is that persons afflicted or threatened with these diseases will investi-gate our claims. We have seen and we know that our treatment offers the sufferer a hope that our treatment offers the surrerer a cope that can be found nuwhere else in the world Write for a copy of our History of Cures and how to secure a definite analysis. In Tompkins' analyses and diagnoses always nade without charge.

# A STRONG

NEW PHILOSOPHY

Two Books far Men and Women of to-day Who Can Think and Act.

By CHARLES FERGUSON "He probes as deep as Carlyle, and smites with the strength of Ruskin,"-Beaton Transcript,

# I. The Religion of Democracy

Foundation principles for men of the modern spirit.

"It is a great book. It clearly belongs, as do few books in a century, to the prophetic litera-ture of the world."—Philip S. Marom, D.D.

tors of the word: "Fieldy & Macson, B. H.
This look briggs us face to face with the Helsal broads which democracy has been grouping that the manner of the manner of the manner of the thorat of which the Individual manner is bound with the universal—the universal driving the univ-plies for the Arcanous Hife; for the appropria-tion and the use of mercal in main and the real in subsection of the manner of the manner of the manner of the subsection of the manner of the manner

you must do them now."
The book is a protest against empty and cum
bersone forms, and superfluons organizations.
It is a plea for the severeligaty of the human
ideal over the irrational and italal elements of
the world.
The book is fresh, interesting, silmulating. It
must be read to be understood.

"A brilliant, searching book that reminds me of Sartor Resartus." "-T. T. Munger, D.D. "It has atyle, insight, high seriousness, spiritual passies. It is a great book," Edwin Markham. 12mo, Cloth. Price, \$1.00, post-paid

### II. The Affirmative Intellect

For the two classes of men who wage the real battles of history.

1 : POSITIVE

"The men of affirmative and creative intelact, who are dominated by the ideal-never for a moment abandoning the heart's desire and the inner law of humanity."

II: NEGATIVE "The man of negative and passive intellect,

who are cowed by the appearance of things and prostrated to so etarnal law.

The Message in this Book comes with ringing tone to both these classes. It is exhibitanting and sympathetic to the one. It challenges and inspires the other.

"It is full of brilliant sentences, sharp and in-cisive as a tempered tilade that pricks one two thinking."—Christian Intelligencer, New York. "It is the product of a robust and independent mind."-Boston Janraul,

### Good Work

Proper Food Makes Marvelous Changes

Providence is sometimes credited with directing the footsteps by so simple a way as the reading of a food advertisement.

A lady out in Shelbina, Mo., says: "About two years ago I was compelled to retire from my school teaching because I was completely broken down with

teaching occause I was completely broken down with nervous prostration.

"I suffered agony in my back. My hands and feet would swell up nights. I was in a dreadfully nervous condition, irritable, with a dull heavy headache continually, had no appetite and could not digest anything if I tried. I was unable to remember what I read and

and the tried. I was unable to termember what I read and was, of course, unfit for my work.

"Some said I had consumption, others said dropsy. One day, as if by providence, I read the testimonial of a lady whose symptoms were much the same as mine, and she told of how Grape-Nuts Breakfast Food

and cured her, so I concluded to try it.
"I left off the old fashioned breakfast and began with Grape-Nuts, a little fruit and a cup of Postum Food Coffee. That was 8 months ago and I have steadily improved in both body and mind. Grape-Nuts Breakfast Food has done more for me than all the medicine I have ever taken, and I am now well again and able to return once more to my school duties and able to do anything necessary in my work.

"My mind is clearer and my body stronger than ever before. Please do not publish my name." Name given by Postum Co., Battle Creek, Mich.

# Shakespeare Club Closing!

To obtain a set of the New International Shakespeare at half-price you must be prompt. Of the sets allotted to the Half-Price Shakespeare Club there is only a small number remaining unsold and it is certain that they will be disposed of in a short time. When they are sold there will be no more sets at our disposal for introductory purposes and the price will positively be advanced. The coupon in this advertisement, if cut out and mailed in time, will bring a set to you for examination, express prepaid, and \$1.00 a month will keep it. No student or lover of Shakespeare should let this opportunity pass,

Sets in 13 Handsome Volumes, 7000 pages. Size of Volumes, 8 x 51 Inches

# The New International Edition

This edition of Shakespeare stands based on three centuries of searching criticism. It indicates the high-water mark of Shakespearean scholarship. It contains the famous Cambridge text, which has been for forty years the standard text of Shakespeare. To this text have been added Prefaces; copious Critical Comments taken from the works of great Shakespearean scholars; full Glossaries defining every difficult word; Explanatory and Critical Notes, which make clear every obscure passage. There are over 200 illustrations, many of them being full-page chromatic plates in colors and photogravures on Japan vellum. Included with the set is a complete Life of Shakespeare by Dr. Israel Gollancz, with critical estimates of Shakespeare's genius by Walter Bagehot, Leslie Stephen and Thomas Spencer Baynes. Shakespeare's Works are given complete, including the Sonnets and Poems. The volumes are elegantly bound in cloth or half-leather, stamped in gold. A set is a complete Shakespearean library.

# Entire Sets Sent on Approval

We are so confident that this edition will please the most exacting buyer that we are willing to send complete sets for examination. But prompt action is necessary if you wish to obtain a set before the advance in price. At the present prices a set of this edition is a rare book bargain, The special prices are \$22.00 for a set in half-leather, and \$18.00 for a set in cloth-about one-half the regular subscription prices. You may pay in little payments of \$1.00 a month. The Coupon will bring you a set for examination (express prepaid by us), 28 Fifth Aver and if not satisfactory it may be returned at our expense without costing you a cent,

### A BACHELOR GIRL'S STORY

Boston Daily Advertiser: It might very properly have been termed confessions of a linerary woman. And they are very entertaining revelations, written in an intimate conversational style with the grace of a true raconter and much whimsical humor.

By ADELAIDE L. ROUSE

Author of "The Deane Girls," "Westover House," etc.

THIS is a charming story of a newspaper woman who gave up the horror of boarding-house existence in the city and built for herself a cozy rural home. Her experiences in selecting the plans, arranging all the details of the house and tending the garden are so delightfully told that the reader cannot help but share her joys, feel the comfort of sunny window seats, and enjoy the fragrance of the old-fashioned flower garden. An old love is renewed in the new home, and there are many sweet bits of heart Interest to entertain the reader. With four half-tone illustrations by Harrie F. Stoner and detail plans of "Red Roof." Ornamental cover. Price \$1.00 net. Postage 13 cents.

Buttalo News: The style is bright, and the humor genial and persoasive.

Milwaukes Sentines: Bachelor glith who go out into the cased who have a sociation. The charm of the story lies in the would to earn a thing will find it abook of rare interest. While the story will appeal to all classes of readers, it will be something in the nature of a pleasant message of hope to the latter day old and wholesomeness.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

#### TOPICS OF THE DAY.

# AMERICAN FEELING OVER THE BOER VICTORY.

THERE seems to be a conspicuous absence, in this country. of the "gloom" that is reported to have settled down upon Great Britain at the news of De la Rev's " rout of Methuen's force on March 7. To tell the truth, the overwhelming majority of the American press are jubilant over the affair, and the only papers that deplore it do so on the ground that, as the British must win in the ond, anything that prolongs the war is a misfortune to both parties. Less than two weeks before (on February 25) De la Rey had inflicted a loss of 632 men, in killed, wounded, and missing, on another British column that was escorting a train of empty wagons; and in the affair of March 7 the British loss was 318 more, of whom 41 were killed and 77 wounded. The prompt release of General Methuen and the other British prisoners is thought by some papers to indicate that the main object of the attack was the capture of the supplies, and as the Boers are cut off from outside sources of food, ammunition, elothing, etc., the belief is expressed that the British Government is now supporting both armies, the Boers being compelled to get their share by such raids as have been recently reported.

The effect of the Boer victory, as the Detroit Free Press and other papers think, will be to encourage the Boers and to increase the determination of the British, and so prolong the struggle. By a curious coincidence, the London Chronicle of February 27 printed a letter from Lord Methuen himself, expressing the belief that the war was about over. The Boston Herald remarks that Methuen has now probably changed his opinion. Says the New York Tribune:

"Either the war is not as near its end as optimistic Englishmen have declared, or there is a particularly big scree doses somewhere in the British army organization. When a British force of twelve hundred men, commanded by a major general, can be attacked by a body of Boers and all but annihilated, the general being captured with a large number of his men and his baggage, and the rest being put to helpless flight, it is mostery to talk about mere "snipping" and guerulla warface. The

The common newspaper spelling of this general's name is Delarey, but Michael Davitt, who knows him personally and has corresponded with him, spells it, in his forthcoming book, De la Rey. His full name is Jacob Hendrick De la Rey, and he is of Huguenot descent. Davitt seems to consider him the heat of the Boer leaders. Boers under De la Rey could not have been stragglers and bushackers. They must have been a numerous and well-organized body. So long as such badies are in the field, there is an outlook for serious work ahead. Etilizer this, we have said, or there is something wrong with the British army management. It may be that both suppositions nor true. With all allowance for circumstances, it seems scarcely possible to explain such a cutartophe as that which has befallen Lord Methuen save on the ground of inexcusable blundering, carelessness or incompetency on the part of somebody.

"If this could happen in a region which is described on British maps . . . as 'partially cleared,' one wonders what might not

DE LA REV AND HIS "STAFF."

happen in the 'area of main resistance.' The catastrophe will not, of course, effect the ultimate outcome of the war. It may not greatly affect its progress. But it will certainly give more than one bad quarter of an hour in London, and should cause a pretty systematic heart-searching among those at the front."

Hamasity is Staggered.—"The prophecy of President Kruger at the beginning of the war in South Africa has been more than fulfilled. England has been slowly but surely forcing the brave Boers to their knees, but at what a price! Blood and treasure have been poured out till the sands of the Transvaal and of the Orange Free State are red and the coffers of Britain are almost engry. Humanity has been staggered, England has been taxed as never before in her long history of wars, but the Boers are not defeated.

"Not since the struggle in South Africa began has England suffered a defent more wounding to her pride than that of last Firlday when the Boer general, De la Rey, captured Lord Methuen, routed his force of 1.200 men, killing forty-one, wounding seventy-seven, and taking more than 200 prisoners. This reverse to British arms can not be other than grave and humiliating to a degree; it is certain to give the valiant Boers new hope, new courage they do not need. It is likely to add months to the struggle, unless England makes some definite move to bring the war to a close by peaceful measures.

"This incident would indicate that the Boers are not quite at the end of their resources. When they are capable of routing so

"The Boers have won all for which they have battled, and saffered and sacrificed, and humanity will be still more severely
staggered if when the end comes England fails properly to reward
such unfaltering devotion to the cause of liberty."—The Chicago
Evening Post.

As Irish View.—"What a picture does that four inlies greaspus-please present. Tommy Attins flees for dear life's sake and the sturdy Borr with trusty rife in hand follows him. Crack, crack, every shot tells. It has now become a human hunt, with the Borrs as hunters. Too frightened to ofter even the semiblance of resistance. Tommy Attins scurries of to cover as fast as his legs can carry him. Is it any wonder that when the departed describing this craven flight was read in the Honse of Commons by the British Secretary for War the Brish members could be served as a superior of the served property of the world round wherever a must of the tribit race is to be found.

"The stupid London Times paid a compliment to the Irish members, when, commenting on their rejoicings over General

"ME CHILD! ME CHILD!"

The Detroit from a s

De la Rey's wktory, it said: "It is un-British to gloat over the misfortunes of soldiers doing their duty." Soldiers doing their duty? Yes, burning down the homes and making war upon the decleaseless women and children of brave men, from whom, cal-tiff-like, they fee when they meet them in open fight. Every manly man, be his nationality what it may, will rejoice at every defeat inflicted upon these cowardly and infamous tools of an infamous Government that, setting the laws of God and man at defiance, has unbertaken to exterminate a brave people by demander of the control of the contr

"That the telling blow delivered by the brave De la Rey has made John Bull realize the danger of the situation is shown by the comments of the English press. A cable despatch states that the English appears 'fully admit the extreme gravity and even the humiliation to British prestige abroad, involved in such a reverse. 'The London Avera has togo back to our Revolutionary War to find a parallel case. It says: 'The event has scarcely a parallel since the dark, dissertious days when the North American colonies passed from British control.' Such testimony shows how England winces under the lash the bees have applied to her. All honor to the twee De la Rey and his gallant followers (New York) in so vigorous a manner: "The Irish Misrall World (New York).

A Boer Misfortune.—"General De la Rey and his men are entitled to wear proudly the laurels they have won, but their victory can not be regarded as other than a misfortune. It will tend to postpose the inevitable and to make more remote the prospects of returning peace in South Africa. It will encourage the Boers who are still in the field to more streamous resistance.

but it will bring no recruits to their already depleted forces. They are surrounded by a cordon which separates them fron those who might befriend them and bring recruits and supplies to their commandos. They are fighting in a hopeless cause, and the humiliation ribich they have inflicted upon England will almost inevitably have the effect of strengthening and intensifying the stubboru determination of the British people to concedent terms short of unconditional surrender. The loss of a few its owner of the surrounder of the sur

SOME carping critics think the blockhead system on the one hand offsets the benefits of the blockhouse system on the other, in South Africa. The Boston Transfersts.

BRITISH WON.—The exploit of Methuen's cavalry in beating the Boera in a four-mile race vindicates the remount department of the British army.—The Philadelpha North American.

"TRIS," said the geologist in South Africa, tapping the specimen with his hammer, "is a species of Irappe." "You don't say," exclaimed his assistant. "Let's look a little farther and maybe we'll find some British soldiers."—The Philadelphia Press.

GENERAL METHUM is to be congratulated. He went out to look for the la Rey, and he found him. His condition afterward reminds one of hypothemists combat, wherein he got the better of his adversary by John Phoenia's combat, wherein he got the better of his adversary by throwing himself on his back with his nose inserted between the enemy's teeth and his hair tangled around his enemy's hands; and there he had him-TW Springraft Republican.

#### BRITAIN LOSING HER COLONIAL TRADE.

GREAT BRITAIN is slowly losing her hold upon the business of even her own colonies, while the United States is gaining it. So at least says a London correspondent of The Iron Age (New York). He tells us that the colonies are graduated.

ally emerging into complete economic independence, and that, so far from their coming more closely to the mother country, they are, commercially at least, receding from Great Britain.

Great Britain.

"Slowly but surely, the United States
are making headway in the British
colonies, and particularly in Australia";
and in the crown
colonies, as distinct
from self-governing
colonies, "the same
economic drift is ob-

GEN, JACOB HENDRICK DE LA REV

servable."

After making allowances for the present condition of South Africa, it is clear, we are told, that when the war is over the Datch will outnumber the British, and they rull take care that they are not in any way commercially tied to Great Britain. The same writer continues.

"Turning now to Canada, it is obvious that Canada is commer-

ANOTHER ERUPTION, JUST AS HE HAD THE LID ON.

—The Brooklyn Eagle.

cially much more tied up with the United States than with Great Britain. Indeed, on the trading account, Great Britain is debtor to Canada, whereas Canada is a debtor to the United States. But it is to be remembered that Canada is rapidly becoming a manufacturing country, particularly the provinces of Quebec and Ontario. Further, as the population of Canada is small, compared with what will undoubtedly be, in a few years' time, her productive capacity, it is certain that Canada will want to sell her goods to other countries. She can not do this if she foregoes treaty advantages. It is clear that the United States, Germany. Russia, France, and Europe generally will hardly agree to take goods from Canada except upon reciprocal terms. As the case presents itself to my mind, therefore, I feel convinced that whatever may be the political sympathies of the colonies, their political independence must, sooner or later, follow upon their economie independence, and that, under these circumstances, any proposals for a zollverein are destined to fail. If, upon the other hand, political sentiment were at the present moment to overweigh commercial considerations, it could not fail, before many years had elapsed, to create such an irritation among judopendent business men as would lead to a feeling of revulsion, and so break up that entente cordiale which is at the present moment a marked feature of the relations between Great Britain and her colonies.

"As an instance showing the futility of purely mechanical methods to divert trade currents, I would direct especial afterest ton to the figures showing the trade of Jamaica. It will be observed that, altho Great Britain is spending \$200,000 a year (haif paid by the Imperial Exchequer and half charged to Jamaica) as a subsidy to the steamboat service between Bristol and Jamaica, yet the vast bulk of Jamaica's exports go to America, while Jamaica buys from Great Britain and the United States in the ratio of 8 to 7. It would thus seem as if we [Great Britain] were wasting our monou youn this venture. It is true that thore is no reason to assume that, even if sugar bounties who had been that one of trade."

#### THE CENSUS BUREAU TROUBLE.

A VETO, so some of the Washington correspondents think, will greet the bill to amend the Census Bureau act, if Congress passes it. The proposed amendment provides that all the present employees in the Census Office, except unskilled laborers, "shall be and they are hereby placed, without further examination, in the classified service, under the provisions of the civil-service act." There is no doubt that the President likes to see the classified service extended, but it is not expected that ho will smile upon this effort to legislate about 2.000 persons into the list without examination. "The healthen spoilsmen, after their kind," observes the New York Times, "rage and will continue to rage, but the course of events is against them."

The fun of the whole dispate, as the papers that favor civilservice reform see it, is the fact that the Congressmen who are now laboring for the above amendment thought that it was contained in the original bill providing for the permanent Census Burean, and they spent a good part of the winter months in stuffing the Census Burean with their friends, who were thus to be legislated into the classified service. In committee, however, the bill was quietly changed so as to include only the comparatively small number of the present bureau who are to be members of the permanent bureau, and, as the New York Tribune observes, "the rest will be dismissed into outer darkness," and "if they want permanent places in the classified service they will have to seek them by the regular road in honest competition." The Tribune adds:

"Enforced in this spirit the law will be not merely harmless, but positively good. There is no objection to mauning the permanent Census Bureau from the experienced clerks already engaged on census work. In this case the process is repeated by which large classes of government employees have been brought into the classified service by successive Executive orders. The thing which it was necessary to guard against was not the permanent employment of faithful census clerks in the Census Bureau, even if they were originally employed through favoritism, but the itwashoon of other departments by an army of census em-

ployees for whom there was no more work in their own burean and to whom the Government had given employment as lost they had any right to expect. It would have been an outrage on persons who had taken civil-service examinations in good that and were on eligible lists to have these census clerks put in office shead of them.

#### ESTIMATES OF MR. ALTGELD.

THERE is a notable difference between the estimates of John
P, Altgeld that appear in the comment on his death, and
the estimates that appeared in 1893 and 1894 in the comment on
his pardon of the Chicago Anarchists and his refusal to interfere

in the great railroad strike. Readers of this fournal in those years will recall that the daily papers were then almost a unit in hitter condemination of him . to-day there is scarcely one that does not have some good words for the dead ox-governor of Illinois. The New York Sun, which is certainly no friend of Mr. Altgeid's theories, says that in his death "the cause of extreme radicalism may be said to have lost its most powerful lead-

IOHN P. ALTGELD.

er in this country. It says that he "tess unquestionably a man of very remarkable intellectual ability" and of "undificiting course to the third with sledge-hammer blows and won admiration by the courage with which he announced his convictions and by the recklessness with which he acted upon them in his official career."

The Philadelphia Ledger thinks that "he was undoubtedly sincere in his beliefs and acted from a sense of duty, as he understood it," and the Raleigh News and Observer regards him as "one of the first men in intellect and in patriotism in America." The Chicago Tribune says:

"The hatred of his opponents was a tribute to his ability. None but a strong man could have worked his way up to national prominence as Mr. Atgold did. He began at the bottom of the ladder. He had no advantages of education or of social influence. Whatever he achieved of fame or fortune he achieved for himself by his own indomitable will and restless energy. Without violating cherished American traditions one can not refuse the meed of praise to this particular farmer's boy who became in 18y2 the first Democratic governor of Illinois in nearly half a century.

He was "a dangerous man," however, thinks the Boston Transcript, and the Brooklyn Kagte believes that "his was essentially a gift if not a genius for destruction," and observes that his death "removes one of the ablest politicians of the entire camp of free riot and Anarchy." The New York Evening Post commends his administration for "his refusal to turn over the state institutions to the spoilsmen," but the Chicago Evening Post says:

"Personally honest, Mr. Altgeld did not hesitate to resort to spoils methods and partizan trickery. His administration was characterized by several scandals and not a little inefficiency, all the result of the violation of the merit principle in the interest of the machine. He was an intense partizan, the be belted in the mayoralty campaign of 1899 and bitteriy fought the Burke-Harrison organization. In no sense was he a leader of men; he attempted to drive and to rule with a rod of iron. A less aggressive and able man could not have succeeded at all, and Mr. Altgeld's success was necessarily short-lived. He was too vinductive, too despot by valuate to the above personal animosities.

"Of the dead nothing but good, enjoins a humane aphorism. Fortunately in Mr. Altgeld's nature and career there was much to elicit the respect even of resolute and convinced opponents."

#### THE PROCESSION THROUGH THE CABINET.

ONLY one member of President McKinley's first Cabinet, Secretary Wilson, will be in his seat at the Cabinet table after May 1 (when Mr. Moody will succed Secretary Long), and rumor has it that his disagreement with the President over the

JOHN D. LONG, Retiring Secretary of the Navy.

Cuban tariff question will result, not loug hence, in a new Secretary of Agriculture. Since March 4, 1807, there have been three Secretaries of State. two Secretaries of the Treasury, two Secretaries of War. one Secretary of the Navy, three Attornevs General. three Postmasters-General, two Secretaries of the Interior and one Secretary of Agriculture. It is Sccretary Long's disagreement with the Administration's expansion policy, the

New York Evening Post (Ind.) believes, that causes his resignation, and it recalls in proof of this his recent speech, in which he declared himself in favor of independence for the Pilipinos, when he proper time counse, if they want it. The Washington correspondents have long predicted this resignation, but have said that the Secretary did not want to "retite under fire" while the Schley controversy was on; and his resignation now is taken to indicate that he believes the controversy is ended. Congressnam William II. Mondy, who is to succeed Secretary Long, is well spoken of by his home papers in Massachusetts; vigor, courage, and executive ability being considered his strong points. In these respects he is frequently compared with the President. The Springfield Republicon (Ind.) says, in a mildly critical

"The two men are not so very unlike in rugged, impetuous honesty. Mr. Moody's is a strong nature and he is a fight. He has not shown tact and wisdom above the usual in handling the affairs and the men of his district so as to promote peace and harmony there. It must be said that his wisdom and far-sight echess in matters of politics and statesmaship remain matter of bope and of expectation than of full assurance predicated upon his carreer in politics to date. The President secured a capable Secretary of the Navy; that he has also got a Warwick from Massachusetts is not so clear, it is n

While most of the Republican papers are tossing bonquets at the retiring Secretary, the more earnest pro-Schley papers are not so complimentary. The New York Journal (Dem.) says that the name of Secretary Long "will live in history as the Secretary of the Navy who did what he could to take away from Admiral Schley, who was there, the glory of winning the battle of Santiago, and give it to Admiral Sampson, who wasn't there." The Pittsburg Dispatch (Ind. Rep.) thinks the Secretary's administration.

"marred" by this 
"defect," and the 
Richmond Times 
(Ind. Dem.), the 
Philadelphia Times 
(Ind.), and many 
other Schley partizans comment sim-

The Baltimore American, the leader of the Schley press, remarks:

"There are no tears of sorrow or regret over the retirement of John D. Long from the secretaryship of the navy. He goes, and at his departure in the navy which is marked, in discredii.

To be Secretary of the Navy.

and which will be so remembered. Five years ago, when John D. Long entered the Navy Department, the nation was pround of its navy, reposed implicit confidence in ships and men, and looked forward to improvement and enlargement without measure. How those dreams failed to come true is a matter of history. In the past five years the navy was the only branch of the Government which did not make marvelous progress. Managed by Long, the service has deteriorated through an infusion of the spirit of favoritism. Merit counted for nothing. Farvities were recognized in assignments, promoted out of turn, faskely rewarded, and good men and true were trampied under the Department maliciously presented a breaching some whole the department maliciously presented as the solid services when the Department maliciously presented as the solid services when the Department maliciously presented as the solid services when the Department's favorities was absent."

On the other side the New York Commercial Advertiser (Rep.) declares that "no better Secretary of the Navy than Mr. Long has been has ever held the office," and it believes that "in dignity, ability, and high character his service marks an ideal level." "It has never been my good fortune," says the Presi-

THE GREAT VANISHING CABINET ACT: -The Brooklyn Earle

dent, in his letter accepting the Secretary's resignation, "to be associated with any public man more single-minded in his devotion to the public interest." Says the Philadelphia Press (Ren.):

"Secretary Long came to a navy which had suffered from many causes. Appropriations had been cut down, the new ressels had not been sufficiently used in cruise or maneuer-, supplies were low, smokless powder had to be introduced, an antiquated system of assigning men to duty revised, and the increase of the navy, with the consequent necessity for training in squadron or fleet-work, recognized.

"For this work Secretary Long had a year before war came. was wisely and energetically used. When the stress of conflict came the right man was in the right command, the ships were ready, the rapid preparation of fifteen mouths had put the entire navy in a condition where two great naval battles were fought, a blockade carried on for months, fleets supplied 12,000 miles apart, and no want appeared at any moment for which the civil head of the navy could be chargeable, and none, it may be added, for which its officers were responsible.

"From the receipt of the despatches at Key West and Hongkong which slipped the cables and sent two fleets to new glories to the day which saw the Spauish fleet destroyed in the East and West, the American neary worked like a perfect unachine pertectly directed. In a twelvemonth the navy hald to be expanded. Vessels were bought the world over. Yards were ransacked, yachts were converted, an auxiliary fleet of repair, hospital, and supply steamers were for the first time in war called into existence, and over \$1.00,000,000 spent in thirty months on new and unexpected expenditures. Nowhere was there a stain. Not a charge leaped to light. Not a contract was questioned. Not even an investigation was asked. Integrity and efficiency, honesty and administrative experience, carried on all this wide work and met all these responsibilities, as admouss as they were unanticipated, without failing in a single practical detail or rousing anywhere the vaguest cloud of suspeption.

"History will deal with this record as no contemporary can. It will recognize all that this faultful, nunscuning, hard-vorking lawyer did in a difficult post, whose difficulties no man could foresee when he was selected. Personal sorrow, crashing loss, and overtaxed health were none of them permitted to interfere with the discharge of public duty, but they add weight to the public gratitude with which flohn D. Long returns to his home."

#### PHILIPPINE VIEWS OF ARMY REDUCTION.

SOME of the Manila papers disagree radically with the opinion expressed by Governor Taft and supported by General Funsion, that an army of 15,000 men will be sufficient, a year from now, to keep peace in the Philippines. The Manila Freedom declares that "there is as much insurrection fomenting here as there was three years ago, and there will be as much three years from now." It believes that, instead of reducing the present force of about 20,000 "there must be an army of at least 55,000 men here, and the desired end will be accomplished somer with 100,000." The Manila Amerikan, altho it feels "disgraced to be compelled to say 60," admits that our present army can not keep order in the islands; and it says that it can not question the truthfulness of the comment made by the pro-Spanish El Neitherson de Manila, which, speaking of Governor Taft's proposed reduction of the army to 15,000 men, remarks:

"We sincerely believe that Mr. Taft is laboring under illusions. If, in place of living at his Malacahang palace tranquilly, he had to pass nights on the plantations of the island of Negros, fleeing from the incirsions of Papa Isio, as our countrymen on the Alicante estate, perhaps he would not be so optimise.

"The United States, if they would pass for a sincere nation, have the sacred obligation to effectually protect in these islands the life and property of foreigners, as they were protected under the domination of moribund and decadent Spain. By the treaty of Paris they have wrested from us the sovereignty, and their flag should guarantee the interests of neutral and pacific become.

as did the Spanish flag which they pulled down from Fort San-

"This is more necessary and more urgent than to talk of the reduction of the army, when good order is at a minimum. Per constitutes only a hope, and personal security outside of Manila is at the mercy of intiinane, guardia de home, "Putaham," Putaham, other disgnsting elements, to say naught of the revolutionists of Battangas, Samar, Lavuna, Mindroo, and other provinces,"

#### The Boston Advertiser (Rep.) says:

"We are now on our fourth year in the Philippines, and we know that the Filipinos are hostile to us, through every grade of society not absolutely bound to us by salaries and position. The

UNCLE SAM: "The critter banks and wags at the same time. Which end of him is lyin'?" - The Minneapolis Times.

whole thing is a source of keen disappointment. The Philippiness are worth little to us, commercially. They are not the 'gateric to the 'gateric are content's are not the 'gateric to the Chan.' They never will be, and the opening of the Nicararguan canal will put them still farther away from the path of commerce to China and to Japan. They are, and will continue to be, a tremedious burden to us financially, to say nothing of the host of disagreeable constitutional and economic issues which they arouse.

"But we are there. We are not going to get out, if ever, until we are completely satisfied that under no circumstances can the Philippines be made commercially profitable. That demonstration will not be accepted until the Filipinos are thoroughly subducd, and the last movement for independence choked off. No matter what facts are developed, this country is going to rub out Filipino resistance. It may be wrong, it may be in violation of the ethics of the Declaration of Independence, it may be terribly expensive, but we are going to do it. President Roosevelt is committed to it, and he has three years in which to act. By that time the Filipinos will be thoroughly subdued. As to details our people will continue to hear contradictory stories from the islands, just as the British press and people do from South Africa, but we shall go on with the same persistence that the English do. We shall be even more persistent, for the Philippine expense, the large, is not so dismal a load on us as our British friends are staggering under. We have more bitterness and contempt for the dark races than has any people, save the Australians, and we are going to stamp out the Filipino opposition, regardless of academic considerations or any talk about the inherent rights of self-government, just because we have started out to, and have, as the countryman used to say, got our national 'dander' up.

"Threes are the facts in the case, and no senatorial debates or inquiries can alter the fact. Some time history may discover that we are wrong now and that the Pilipinos are right in their ungrateful opposition to us. Some time our own people may feel that, morally, we made a mistake in our conquest of the Philipines. But sow our people, so far as they find expression are determined to carry the Philippine business through, even tho they may wish it had never been begun."

# ILL FORTUNE FOR THIRTEEN ANTI-TRUST LAWS.

COME of the papers are wondering what the legislatures of the Western and Southern States will do now, since the Supreme Court has made waste paper of their radical anti-trust legislation. It was only the Illinois trust law that was declared unconstitutional by the court, but twelve other States, Georgia, Indiana, Louisiana, Michigan, Mississippi, Montana, Nebraska, North Carolina, South Dakota, Tennessee, Texas, and Wisconsin, have trust laws built on the same plan, and it is the general opinion of the press that they, too, receive their quietus in the Illinois decision. The fatal defect in the Illinois law (and in the other twelve) was the provision that the penalties against consolidation should "not be held to apply to live-stock and agriculthral products in the hands of the producer or raiser." The Supreme Court decides that the Fourteenth Amendment to the federal Constitution absolutely forbids such an exemption. No legislature, says the court, can "divide those in trade into two classes and make criminals of those in one class , , , while allowing another and favored class engaged in trade to do the same thing with impunity." The laws in all the States mentioned above have provisions excepting one or more favored classes from the penalties against consolidation.

Labor organizations have a special interest in this decision, thinks the Pittsburg Dispatch, for it may mean "that an antitrust law to be constitutional must bear as heavily upon labor-unions as upon organizations of capital." "Imagine the effect of the news in Texas," says the Providence Journal, where "the people have the most stringent anti-trust law known in this country," and where the fines paid into the state treasury by the trusts have been "almost as profitable as the trust charters have been to New Jersey." The Chicago Éreznig, Petst asys:

"It is not unlikely that the next general assembly of Illinois will try to enact an anti-trust law which will make no exemptions from its provisions. There will be no harm in doing so, but it is open to question if such enactment will do any particular good. The State is not the place from which trusts should be controlled. In the majority of cases these industrial combinations are far more than State-wide in their purpose

and operations. They are largely national in scope and they should be subject to national legislation."

Says the Chicago Tribune:

"That law has not been so useful that its demise will be regretted. Most if not all of the anti-trust opinions rendered by the Illinois supreme court could have been made under the common law. There was no need of an anti-trust enactment to give the court authority to telerate monopolies unlawful. That hav may come the court of the court of

"The general assembly, which is to meet next year, will have the power and may have the inclination to frame a new anti-trust law. But that law, to be vainly, will have to be without exemptions or exceptions. It must apply to farmers as well as all other men. So it should, If it is wrong for packers to combine to raise prices it is equally wrong for raisers of live-stock do so. The representatives of the agricultural interests in the legislature may still be unwilling that the anti-trust banket shall be stretched out to cover their constituents. Then there will be no anti-trust law."

It is interesting, in this connection, to note the leading features of the Attorney-General's petition, which was filed last week, formally opening the case of the Government against the Northern Securities Company. Says the New York Evening Past:

"The two main points on which Mr. Knox elects to present his case are these: First, that the Northern

Securities Company, by its absorption of the Great Northern and Northern Pacific railways, has effected a combination in restraint of trade: second, that the Securities Company, having been organized solely as the machinery of a merger, and have ing given no consideration for the stocks acquired, beyond its own certificates, 'was not organized in good faith to purchase Whatever may be the judgment of the and pay for the stocks." courts on the second of these contentions, its admitness must be manifest. Resting on it, the Government's lawyers may at least evade the strong contention of the defendants, that to forhid purchases for bona-fide investment by a stockholding corporation must logically be followed by forbidding, under similar circumstances, such purchases by private individuals. If the Attorney-General's second point were to be sustained, he would probably answer that the Securities Company's acquisitions could not be compared with purchases by an individual who draws bank checks for what he buys; that, in fact, the acquisitions were not purchases at all, but merely a voluntary merger. We do not, of course, profess to foreshadow the decision of the court on this highly interesting point. We shall await with great interest, however, the rejoinder of the defense. For it is clear to every one familiar with recent moves in high finance that the whole theory of corporate combinations. as at present practised or designed, is now in question."

#### LETTERS AND ART.

#### THE AMERICAN AUTHOR ABROAD.

THE questions, how far have European influences left their impress upon American literature, and to what extent has the reputation of our American authors been affected by residence abroad, afford an interesting subject for speculation. Mr. George W. Smalley, who, by virtue of his long residence in London as a newspaper correspondent and his wide acquaintance with men of letters, is well qualified to speak on this subject, calls attention (in Munsey's Magazine, March) to the number of famous American authors who have chosen to make their homes in Europe for varying periods of time. The list includes James Russell Lowell, William Dean Howells, Bret Harte, "Mark Twain," and Houry James. Of these, Bret Harte seems to have been affected least by the environment in which he lives. He has been in England some thirty years, yet he continues to turn out stories of early California life very much as if he still dwelt on the Pacific coast, and as if the California of today were identical with the California he knew in 1860. "Mark Twain," too, has lost none of his Americanism in his wanderings. He has rather returned to America more primitively American than when he left his native shores. On the other hand, Henry James seems to have severed all connection with this country. Contrasting Howells and James, Mr. Smalley says:

"Mr. Howells, who has continued to live in America and to write for an Anglo-American audience, retains nearly all the prestige which he won thirty years ago. He is in contact all the time with the Americanism he describes. He has not closed is eyes to what is about him, nor lived in a remote past. He continues to ofter to the English public, as well as the American, studies of actual American life. It might be difficult to trace his influence on current English fiction, just as it would be difficult to trace with the continued of the continued

"Meanwhile Mr. Heury James as a writer has become, in so far as it is possible for an American to become, throughly her perapited. I don't think he has set foot on his native soil these twenty years past. There are Americans who will think the reproach. It is not necessarily so, and it is very far from being so meant. Mr. James luss his own conception of his work and of the means by which he can best do what he thinks best worth doing.

"In thinking of him as a representative American abroad, and

of his contributions to American reputation abroad, I had rather omit these few later years during which he has been experimenting with subjects which might well enough be left to the Psychical Society. The period which ended with 'The Awkward Age' is the period in which Mr. James, as an American writer, made his most brilliant additions to American riterature and most enlarged its fame in Europe,"

Noue has done more to awaken European interest in American literature and respect for it than the authors who were also ministers from the United States to the court of St. James. Mr. Lowell and Mr. Hay are especially mentioned in this connection. Mr. Smaller says:

"Can any one compute the personal influence of two such authors as Motley and Lovell, when to the brilliancy of their fame as writers was added the authority of a great diplomatic position? The author helped the diplomatist, and the diplomatis helped the author. Both together gave a bent to English opinion in favor of America and things American which would have been long delayed but for their cooperation. Much the same thing may be said of Mr. John Bigelow and Mr. Whitelaw Red in Paris; of Mr. Bayard Taylor and Mr. Andrew D. White in Berlin. The full measure of our debt to these minister authors can only be inferred, unless one happen to have some knowledge of it at first had.

"With regard to all these writers," concludes Mr. Smalley, "European culture, European leisure, European refinement, have worked together for good. To all of them their country has reason to be grateful, nor is any one of them less an American because he has borrowed from the stores of European knowledge and experience. Whatever has been borrowed has been repaid a hundrefelfold.

#### IS POETRY LOSING ITS POPULARITY?

"W IIAT has become of poetry?" asks a publishers' paper, in its annual summary of "the richest and most active period of the publishing business ever known in the annals of this country." The Springfield Republican, which takes up the inquiry and admits that "publishers almost universally have for many years rejected any proposal to issue a volume of poens, suless the virter will bear the expense of publication," thinks that this state of affairs reveals a curious condition of the public mind. "It is, the testimony of the ages," it declares, "that

BORERT CND RWOOD JOHNSON,

RICHARD WATSON GREDER.

CLARENCE CLOUGH BUEL

poetry is the one product of the soul of man that lives to characterize and distinguish its advance, under whatever degree of civilization." It continues:

"Forty and sixty and seventy-five years ago, the poems of our American singers were sure of their audience. Longfellow's little volumes commanded their remunerative public. of the Night ' wen a success which could not be had to-day. His translations, gleanings from the then unknown field of European minor poetry, beautifully done, coming out in dainty thin voltray, etc .- paid the publisher and the poet. But there were few then writing good verse in America; now there are many. It is true, of course, that the verse of to-day is largely motiveless and technical. But it is rather the abundance and the familiarity of such writing that dulls its welcome. A great singer like Burns would have no such power over the British public as he had in his day, coming after the artificial period of the eighteenth century, when Cowper was the nearest to nature, and Wordsworth had not yet begun his new departure. Even great poets owe something to their opportune appearance.

"The field of the twentieth century is open before the poet, so far as his expression is concerned. That no great poet has arrived as yet is of small moment. The fact remains that there is just as good poetry now appearing in the press, both in newspapers and books, as at any time in the last century, and there is a great deal more of it. One recalls Tennyson's skit on his imitators and descripts:

All can raise the flower now, For all have got the seed; And once again the people Call it but a weed

It is not the poet that is wanting; it is his audience. The audience that pays for looks pays to be amused, and poetry does not amuse it, while the multitudinous fictions do. The publishers

are few who are willing, as Horace Niles once said, to do something once in a while for the honor of the house and the benefit of letters It is the dollar that governs to be forgotten that there is but one phase of the question for there are other manifestations of a widely different nature in the realms of history, science, religion, philosophy. These are not in the order of belleslettres, to which the fiction and the poetry more strictly belong.

The New York Mail
and Express thinks

that the reason for the lack of great poets lies in the fact that "the poets of our day are writing prose." It says:

"In every period of world-history genius has sought unconsciously the outlet for fullest self-expression, regardless of the mode. Men who would have been marshals had they lived in Mapoleon's day are now forming trusts, 'combines,' and similar industrial achievements. Men who might have kept the Stuarts on the throne of England and the Bourbons safe in France are running department-stores. Great orators are auctioners, because Mores' is tick killed oratory. Poetry is not dead and it will not die. But poets, like Maurice Hewlett, and Gilbert Parker, and James Lane Allen, are writing their poems in prose And we can not quarrel with them. Because, after all, it is only the age and not the individual that nutters. There may sent a lack of poetry. But there are poets a-plenty. And the medium of expression is unimportant.

Mr. R. Warwick Bond, taking up the discussion on the other side of the Atlantic, writes to the London Academy;

"As a nation we are, I believe, gradually losing, in the prevs of other claims and interests, the taste for poetry her c. We study Shakespeare and Dante and many another, it is true, with a zeal never shown before; but we study tham, so to speak, for examination purposes, for their ethics, enaracterization, and so forth, and not for pure love of the wedding of beautiful thought to beautiful words, which Longinus called 'the very light of thought,' The special taste for this art must be inspired young. In proportion to the pleasure it is capable of giving is the effort needed to acquire it. That effort has now been largely abandoned; it is hardly ever born, as is that for drawing or music, spontaneously, and so is seldom acquired at all. A national system of education which neglects the training of ear and taste by fine verse, finely repeated to, quite as much by, children, may make us better soldiers and traders, but will fail in imparting or educing, and perhaps, nationally, in preserving, one of the highest human faculties in its gift."

#### THE VICTORIA MEMORIAL.

SOON after the death of Queen Victoria a committee was papointed, consisting of well-known British artists and practical administrators, for the purpose of erecting a suitable memorial of the late Queen. "Wisely planned and solidly wrought—wast and noble if that might be, but at all events dignified—a scheme of harmony, and not an assemblage of componises, a chance muddle—a monument that would remind the folk of other lands and of late epochs of one whom her country gave itself the sad relief, allowed itself, even in its sorrow, the proud pleasure, of honoring, "such, in the words of Mr. Fred-

erick Wedmore, the art critic of the London Standard, was the ideal that the committee sct before itself. It determined that the memorial should be raised in front of Buckingham Palace, in the neighborbood most of all associated with the sovereign's presence and with functions of exceptional state, and invited five of the leading architects of Great Britain to contribute suitable designs. The design tinally selected (and

A BIRD'S-EYE VIEW OF THE PROPOSED STATES AND MEMORIAL.

reproduced herewith is by Mr. Aston Webb, who has done much important architectural work in London; and the central monument, with the statue of the Queen for its principal feature, has been entrusted to the prominent English sculptor, Mr. Thomas Brock. Recent despatches from London amounce that the plans are well under way, and work will be begun on the site immediately after the compation.

Mr. Wedmore, who writes in The Patl Matl Magazine (Febuary), declares that the terrace and monument planned "seem happily satisfactory, and promise to endow us with a noble, mentorable addition to the architectural glories of our London Town." He continues:

"In the first plan for that part of Mr. Aston Webb's scheme which provides for the ornamental barrier against the front of Buckingham Palace, there was, as I understand it, a greater use of grille work than in the revised version. . . . The change itself is a good one. The greater appearance of solidity and volume which is obtained by the increased employment of stone has somehow been obtained without sacrifice of elegauce, without a suggestion of undue heaviness. I do not know . . . whether this particular change was suggested in any way by the thought of due provision for Mr. Brock's part of the undertaking; but, at least, another change was, and I am now referring to the admurable bend, the studied curve, just at the central point of the long line of arcade-shall one say?-that stretches, or is to stretch, in front of the Palace, near to where the railings now are; but of course much farther to the north, and farther to the south too, than they stretch. It is a welcome relief, completing that beauty of proportion which is-as, I think, has been implied already-one of the charms of the design selected. Proportion, breadth, unity; these are high virtues in any work of art; rare always, and rare especially where the work is, of necessity, complicated and intricate as this is.

"The great point now is that the scheme be carried out in its entirety—that not to-day indeed, nor to-morrow, but in some future not very remote, there shall stretch a great and stately aveaue from Buckingham Palace to Trafalgar Square itself—at statues and supporting arches down the long Processional Rod; the greater arch at the far end; and all in recognition, and in reverent memory, of the sovereign benefactress England knew."

#### THE POWER OF THE PERIODICAL.

I T is often assumed that fiction is the most popular form of reading. The idea is common that "all the world" reads the popular novel. Yet as John Cotton Dana, librarian of the Newark (N. J.) Free Public Library, foreibly shows in a statistical article in The World's Work March, fiction makes a very insignificant showing in America when compared with the newspaper and the periodical. Mr. Dana writes:

"About 4,500 new books are published in the United States every year, and the total number of copies issued and sold is perhapa 10,00,00,000; but the intellectual food of the mass of the people is, after all, not books so much as newspapers and periodical. I have made a computation of the number of people who do any preading at all and of the number of newspapers read in the United States every year, together with a classification of the subjects treated—with somewhat startling results. In considering the gross amount of newspaper reading, I estimate one and a half readers to every copy of a periodical. Were computing thus the number of journal readers among our seventy-five million people is smaller than is usually supposed.

"From the total population deduct children under fourteen, illiterates, and a few other small un reading classes, and there remain about 40,000,000 adults who could read periodicals if they would. About four billion separate copies of periodicals of all kinds are printed in this country every year, one hundred to each possible reader. But many, probably a large majority of the people who work in mills, mines, factories, and on farms read very little, tho a goodly proportion read something. On the other hand, the professional and managing classes read many more than a hundred a year. Any reader of this article who runs over a brief list of his more intimate freeds will find each runs over a brief list of his more intimate. Freeds will find each runse over a brief list of having forty million people reading one hundred priodicals in a year, we have probably not more than half that number reading on an average twice as many."

Mr. Dana calculates that the number of daily, weekly, and monthly copies of periodicals published in the United States is: Dailies, 2,865,466,000; weeklies, 1,208,149,000; monthlies, 265,452,00; total, 4,337,108,000. Selecting a few typical issues of newspapers and periodicals, he analyzes and tabulates their contents, making due allowance for space taken by illustrations, display advertisements, and display beadings. In the following table he gives some conception of the amount of space, in terms of a hook the size of "David Ilarum," devoded by these periodicals to the various kinds of material. "The analysis is only tentative of course," he remarks; "an analysis of another group

of papers published on different dates would show different results. But the difference would appear, I believe, rather in minor details thau in the general outlines."

The obvious lesson to be learned from Mr. Cotton's figures, observes the New York Times Saturday Review, is that periodical publications exert a "tremendous influence" not only on the life and activities, but on the intellectual culture, of all persons in this country who read. It continues:

"What is important to remember is that the number of these publications within the lifetime of thousands of persons now living has increased many-fold. In the early part of the last century few periodicals, outside of the daily and weekly class, seristed at all in this country. Those which, in any sense, could be called successful might perhaps have been counted on the fingers of one's two hands. Even the weekly and daily papers were few in number and their circulations were very small. If the wg to back to the beginning of that entury we find that the daily newspaper was just beginning to make its start, while the weekly was in no sense a distinct and pervasive power in the life of the people. Probably the last twenty-five years mark the precioid in which have sprung up quite two-thirds of the periodicals now extant in this country. In that period also has occurred a source we have the probability of the periodical source statut in this country.

"In all this striking movement we see, as in most other phases of our civilization, a constant rise to better things. May we not anticipate further and constant advances? From popular and ephemeral fiction readers are certain to turn, in time, to looks having the more lasting and vital qualities. Already there are signs of wider interest in biography and history, for which istorical fiction obviously prepared the way. Here exists a wand, to the majority of readers, probably an unexplored domain, rich quite beyond any dreams of literary avarice. No man will be accused of undue optimism who preclicts that the next ten years will find for books in these two classes a larger demand than ever before was known.

#### SOLITUDE AND GENIUS.

GENIUS, says a recent writer, is by its very nature solitary. Every original mind comes into the world antagonistic, by the law of its creation, to regulations which others accept because they find them in existence. Schopenhauer draws attention to this fact when he describes a genlus as one whose center of gravity lies in himself. Ruskin declares: "An artist should be fit for the best society, and should keep out of it." If Cowper could say:

O Solitude, where are the charms
That saves have seen in thy face?

Wordsworth's habitual mood was rather voiced in the words

#### Now thanks to Heaven! that of its grace Hath led me to this fonely place.

In the current issue of *The Quarterly Review* (London) these reflections and quotations are put forward, and the writer, moralizing further on the genius of solitude and its literary and artistic exponents, observes that while the human heart ever yearns for society, not solitude, yet "there are souls born as surely for solitude as they are for death." He continues:

"After all, who can altogether escape solitude? 'There is often apparent rather than there is communion.' Association is often apparent rather than real. As Emerson remarks: 'The remoter stars seem a nebula of united light; yet there is no group which a telescope will not resolve.' ...

Weber gave way to a fit of contemptuous despair when Beethoven's 'Fidelio' was received with indifference. He complained that the audience could not understand the greatest music, and that the music-hall would suit them better. He should have known this. Genius has ever been at its best when it has been deaf to contemporary applause. When a friend of Turner's remarked of one of his pictures, 'I never saw the Thames look like that,' the painter doubted his friend's insight, not his own, and replied, 'I do not suppose you ever did.' To be fair to oneself as well as the world is the best escape from affectation. 'Man is what God made him, ' says Cervantes; and those have carried on their work with most serenity who have acquiesced, regretfully it may be, in the limitations of their birth. It is the quality, not the quantity, of approval which must sustain them. Some, indeed, have lacked even this support. There is a touch of comedy in poor Hegel's complaint, that there was only one man who understood him, and he misunderstood him. So, too, Browning, when questioned as to the meaning of something he had written, replied that the Almighty and he knew what he meant when he wrote it, but now only the Almighty knew. But while intelligible, at any rate, to himself, many a bold spirit in all times has soared into an atmosphere where he found himself alone

In every generous heart, adds the writer in *The Quarterly*, there is a feeling of resentment, as well as of sorrow, in the con-

templation of unrewarded and unappreciated genius. The solitude of too many of the world's greatest personalities has been one "not of choice, but of compulsion":

"Poets and musicians, with their high strung organization, have contributed a melancholy list. Beethoven and Chomin felt that their music ought to entrance the world, as it did themselves; but the world had not, like them, been caught my into the heavens, and could not understand it. As we enter the realm of poetry the regal form of Dante meets us-true type of lonely sadness. The more purely imaginative the work, and the further removed from the commonplace level, the greater will be the yearning for peace. How much solitude went to the creations of Dante's brain? How often did Milton long to retreat within himself from the busy cares which beset him? The philosophic mind of Wordsworth found ample sustenance in nature : but many and sometimes conflicting influences led such poets as Petrarch, Cowper, Byron, and Shelley to their seclusion. It never found a more ardeut advocate than Leopardi. Lovers of this gifted poet will recall his odes to 'Love and Death,' with their sad burden:

Al gener nostro il fato Non donò che il merire

"How many have turned away basfled by the riddle of such lives as those of Beethoven and Chopiu—pride compacted with humility, gentleness with ferocity, the tenderest love toward mankind with the bitterest scorn. Ideals of humanity, dreams of moral and intellectual greates for a world incapable of its attainment, domest them to an bourtly distillusionment. Both attainment, domest them to an bourtly distillusionment. Both into, itso their aspiration was for the lancel of insurantlyggind too, to the bouquet of the opera. Why do we acclaim what their contemporaries only dimly recognised? We shall see with visit become of this dreamer. The world has seen many times; one great dreamer revolutionized the world. Yet the cry is still the same. Must we always permit posterity to reverse our judg-ments?"

America has produced at least two great expouents of the genius of solitude. One of these is William Penn, whose "Enchiridion" has lately been reprinted in London, with an Introduction by Edmund Gosse, under the title "Some Fruits of Solitude." The renaissance of this book was due to its casual discovery ou a bookstall in San Francisco by Robert Louis Stevenson, who later presented a copy to a friend with the words: "If ever in all my human conduct I have done a better thing to any fellow creature than handing to you this sweet, dignified, and wholesome book, I know I shall hear of it on the last day." The second great American exponent of solitude, and perhaps the most consistent of her votaries, is Henry D. Thoreau, who insisted that he "never found the companion who was so companionable as solitude," and who proved his faith by living for many years in a simple wooden shanty in the seclusion of the pine-woods near Concord Mass

Nathaniel Hawthorne, too, was a "lonely man." In an article on "The Solitude of Nathaniel Hawthorne" in The Atlantic Monthly (November), Mr. Paul Elmer More reminds us of Hawthorne's "habit, during his early Salem years, of choosing to walk abroad at night, when no one could observe him, and of his trick, in later years, of hiding in the Concord woods rather than face a passer-by on a road"; and goes on to say that "not in the trageclies of Greece, or the epics of Italy, or the drama of Shakespeare will you find any presentation of this one truth of the penalty of solitude laid upon the human soul so fully and profoundly worked out as in the romaness of Hawthorne." "The Scarlet Letter" was a noteworthy Illustration of this. "The whole plot of the romanes," declares Mr. More, "moves about this one conception of our human isolation as the penalty of transgression."

It is well to remember that men of genius, tho isolated from their contemporaries, do not sever the link that binds them to humanity. To quote again from the writer in The Quarterly Review, "they find their sympathy in the unseen contradeship which is denied to them on earth. It is 'the mystical brotherhood,' of which Heiue speaks, who 'bow to each other' across the centuries."

#### SUDERMANN'S LATEST PLAY.

HEMANN SUDERMANN'S new play, "Es Lebe das Leben" ("Long Life to Life"), which has recently been produced in Berlin and Vienna, seems to have proved a disputed success in the German capital, while in Vienna it is accepted as a very lossitive tri-

has not in either city been blind to the shortcomings of the play, the chief of which is a certain theatrical nonenity." remarks W. von Sachs, the Vienna correspondent of the New York Commercial Advertiser: "but its merits, that it is well written, excellently constructed, and, above all, that it is eminently grateful from the historian's point of view, have

umph. "Criticism

been evidently more speedily detected here." Charles Harris, a Berlin correspondent of the New York Evening Post, describes the play as "a tissue of improbabilities, which the skill of poet and actor makes for a brief season most real"; but he concedes that it has living

interest and great dramatic power. We summarize his account of the plot of "Es Lebe das Leben" as follows:

Sudermann is dealing here with a gruesome theme. The presupposition of the whole is a case of martial infidelity in the higher circles of Berlin. It is hardly fair to call it a drama of adultery, for the degree of grossness of the infidelity is veiled in the discretest silence. In any event, fifteen years of correct living have passed since then, and the secret seems foreversafe, when the action of the play begins. The persons are, with few exceptions, Berlin aristocrates of to-day. The time is the end of the nineties, when the new civil code was taking shape in the Reichstag. The title (whatever else it may also mean) points to a passage toward the close of the fifth act, where the guilty wife proposes it can be a supposed to the content when the rown self-indicted

The scene of the first act is in the house of Count Kellinghausen. It is a man of infinite good-nature and kindiness, but otherwise quite medbace, whereas his wife Beate is the dominating figure of the drama. She it is who has transgressed the marriage law and has found the object of her unwavering affections in a Bisron Vädkerlingk. Herchief aim in file is to be his counselor and stay, to further his political carrier, and to awaken in him the ambition for that great future for which she thinks him fitted. The Baron has meanwhile become, through force of circumstances, the warm fixed of Kellinghausen, and sees in the painful restraint of the resulting platonic relationship with Beate something of penance for his wrong.

In the heat of a political campaign, Vilkerlingk's former secretary, who has goue over to his opponents, the Socialists, publicly alludes to the whole scandal, and in the hour of the Baron's triumph the news reaches Kellinghamsen's sens. He asks his friend and his wife, as a matter of form, to give their word of honor that the charges are fable. The main ready, but the woman comes out with the truth, for she is convinced that V8kerlingls's lie would necessarily be followed by his death at his own hands. From that moment her course is clear to her; she must call be filled that he may be used tofff his high desting. To save appearances, for the time being at least, Count Kellinghausen plans a public breakfast, at which all the political leaders are to be present, Völkerlingk among them. The guess to come, the quondum friends drink to each other's health. But also has her toast to offer. She reminds them how she has struggick with death for many years, and has yet found existence to leautiful and desirable that she can fully propose to-day a toast to life. As the glasses clink in response to her little speech is is seized by a spasm of pain and weakness and totters out of the room to die.

Kuno Francke, who writes to *The Evening Post* from Berlin under date February 9, is very severe in his criticism of the new play, which he treats us a striking illustration of the degenerate tendencies in the modern German drama. He says:

"When will the German drama fulfi the prophetic message of fifteen years ago, free itself from the shackles of sentimentality and convemional formality, and rise to a really human representation of the great conflicts of modern life? Björnsen's Beyond Our Strength, 'which is being performed with such masterly skill in all the great German theaters, should point the way toward this goal.

#### THE BOOK BAROMETER.

FROM the booksellers' and librarians' reports for the month ending Pebruary 1, it appears that "The Right of Way" still maintains its supremacy. Among the other recently published novels, "The Man from Glengarry" and "Sir Richard Calimady" occupy the most prominent places. The appended lists are taken from The Word's Work March):

#### HOOK-DEALERS' REPORTS.

# SCIENCE AND INVENTION.

# SOME EARLY PREDICTIONS REGARDING PHOTOGRAPHY.

In N the year 1839 a proposition was before the French parliament to vote a sum of money to Daguerre, the inventor of the daguerreotype process, as a national testimonial to his contribution to science. The matter was referred to the eminent scientist Araggo for his report. This roport is unearthed from the records by M. L. de Launay, who writes of it in La Nature (February 18). It is particularly interesting for its statement of the exact status of photography in its early infancy and for its somewhat annising forecasts. In the light of what we know today, the great Arago's copionos that photography would never become common, and that it could not be utilized to take portraits, have a curious interest. How many of our solver scientific predictions of to-day—about wireless telegraphy, for instance—will read just as foolishly in 1925? Says M. de Lounay:

"In the first place, A rago recalls the invention of the camera obscuraby the Neapolitan lean Baptiste Porta, and the wish expressed by all who had observed the reproduction of objects by its means that some means might be discovered for rendering them permanent. "This," he adds, 'seemed to be a dream ... but it has nevertheless been realised. If the then nurrates the first results obtained by Niepee in 1827, which seemed limited to "the photographic reproduction of engravings." Niepee, which will be remembered, caused light to act on bitumen, was obliged omake exposures of to 10 2 hours in bright smillight, which made even the reproduction of inanimate objects impossible, owing to the movement of their shadows."

The method of Daguerre was a great improvement over this, and Arago states that its rapidity was the feature that had most amazed the public. He says:

"In fact, ten to twelve minutes are all that are necessary, in dark winter days, to take a view of a monument or a part of a city. In summer, under bright sunlight, this may be reduced one half." What would he have said to our exposures of one-hundredth of a second or less? . . . The following remarks shows remarkable sentific foresight: Perhaps thousands of fine pictures will be made by means of the dagmerrectype before its mode of action has been completely analyzed. Not thousands, but millions of photographs have been taken, and we are not yet certain about the sesential have been taken, and we are not yet the control of the developer.

"Arago looks forward to the reproduction of the buildings of foreign lands;... be points out with Paul Delaroche the advantage that painters may derive from photography (perhaps the point where early hopes have been loast realized, since it has given us only photographic facsimiles, against which real artists have reacted toward impressionism). Finally, he asks these two important questions which may make us smile; namely, whether photographic methods will ever become common and whether they may be applied to portratiure.

M. de Lainay paraphrases Arago's answers to these questions. The Prench savant, linking, of course, of the cumbrous and expensive daguerreotype, concludes that photography will never be commonly used, and that those who hope to preserve sourceins of travel by its means are simply deceiving themselves. What would Arago have thought, exclaims M. de Launay, if be could have been in Switzerfand in 1911. There he would have seen armies of cameras, snapping on all sides, even from trains in motion. As to portraiture, which later became the most successful field of daguerreotypy, Arago is also doubtful. He says in his report:

"The solution of the problem involves two apparently irreconcilable conditions. That the image may be formed rapidly, that is to say, during the four or five minutes of immobility that we may expect from the hving subject, the face must be in full sunlight; but in full sunlight the most impassible countenance will be distorted into a grimace."

He notes, however, that Dagnerre himself has endeavored to solve the difficulty by the interposition of a blue veil. In conclusion Arago clearly states the problem of color photography very much as it exists to-day, and M. de Lannay remarks that, in the solution of this, we are in much the same position as Dagnerre was in \$59 with relation to that of the ordinary photograph, "Perhaps," he says, "the next half-century will give us real photography in colors, that is to say, the direct and complete fixation of the colored image us we see it in the camera or in a lookingglass,"—Prontation made for Tue Littraky Diasts.

### ELECTRIC COTTON-MILLS.

THE accompanying picture is not upside down, as it would appear to be on a casual glance. It is a view in one of the new Southern cotton-mills where the machinery is operated by electricity and where the motors are attached to the ceiling to avoid taking up floor-space. Says W. B. Smith Whaley, who writes of them in Cariter's Magazine (March):

"The motors, which are placed overhead, as shown above, do not occupy any floor space, are absolutely out of reach, afford no danger to human life, and are so proportioned as to give, accord-

ELECTRIC COTTON-MILL, SHOWING MOTORS ON CEILING

ing to the number installed, the greatest flexibility to the plant as a whole. No special machinery is installed for lighting the plant, as the current is taken from the generator producing the power. Temporary power for any purpose, in any portion of the plant, is easily supplied by a portable motor, which is readily tapped on any power circuit in convenient reach. These and many other advantages, from a mechanical standpoint, have been demonstrated by actual experience.

"There is a saving in the friction alone of 20 per cent. The producing capacity of the machinery operated is, in actual practice, increased about 4 per cent, duo to the steadiness of this method of diving over tho usual method to press and beth, sind the more uniform speed obtained throughout the plant. The commons flexibility and economic problems solved by the installation of these electric-driven cottom-milks are felt even outside of the mill itself. The plants are readily available for furnishing power to others within trach to the extent of its surplus, and may produce a consolerable revenue from this source; and they and supply power at a lower figure than that at which isolated plants could generate their own power.

"In the city of Columbia, S. C., the Olympia power plant not only drives the Olympia Cotton-Mills, the Gramby Cotton-Mills, and the Capital City Mills, but also the street-railway, and furnishes the light and power company current for cms, are lights, and incandescent lights from the same source, and more economically than the individual companies could maintain separate power plants, while the Olympia Mills sell the current at a substantial profit.

"South Carolina will shortly have operating no less than fifteen of these electrically driven cotton-mills, which will gradually affect the economic conditions in the section surrounding each of them, by offering conveniences more cheaply than these communities could possibly hope to get them by independent plants.

"It appears possible thus in the near future to operate a line of electric railroad, with mills and intermediate power-stations, from the mountains to the sea, and at less cost thau by the establishment of plants for the purposes of the roads alone,"

# POISONOUS EFFECTS OF WOOD ALCOHOL.

W E recently quoted an article in which it was pointed out that ordinary wood alcohol is a poison. Altho this is the case, it is stated by Dr. H. T. Guss, of Washington, in The Medical World (March) that only one State—Ohlo—restricts its sale on this account. Dr. Guss notes that many people do not understand that wood alcohol is chemically distinct from ordinary alcohol, and suppose it to be merely alcohol made from wood. He says:

"It was formerly quite a point in favor of the introduction and use of wood alcohol that it could not be taken as a drink, for it was (and is) not uncommon for workmen to drink ordinary alcohol diluted with water—especially when oblamed without cost. Indeed, some physicaus prefer to prescribe common alcohol in this way rather than to direct its use in the form of brandy or whisky. Some refiners of wood alcohol now assert that the placing on the market an article which "will perform all the domestic functions of grain alcohol," having the caution on every reducing the danger of the missue of alcohol intend of interacting it. It does not appear that this effect is being realized, however.

"Wood alcohol has been used to a considerable extent in the preparation of extract of witch-hazel, hay run, Florida water, and other toilet articles, and in limments; also in extracts and essences put up for internal use. It has even been substituted for the official alcohol in the preparation of medicinal inclures and other remedies. It is represented as a 'refreshing linary for attended with danger, as shown by the numerous accidents and fatalities that have been reported.

"It occurred to me, as doubtless it has occurred to many, whether or not wood alcohol is used to ndulterate or imitate the common alcoholic beverages? Inquiries made at the Bureau of Internal Revenue and at the Department of Agriculture web been answered in the negative; that is, there is no official information that wood alcohol is used to any extent to adulterate beverages in this country. However, the suggestion was made by different persons before the congressional committee that might be used in this way, and a man from North Carolina said the understood if was so used. From a statement in "Allbuit's System of Medicine" it appears that whisky is known to be adulterated with wood alcohol in Great Britain.

"There is a large consumption of extracts—principally ginger—in some districts where such use is practically the same as a beverage. Only one manufacturer udmitted, before the congressional committee, that he used wood alcohol in making extract of ginger, and he seemed to think it perfectly legitimate. Other productions of the production of the production. In Georgia, 'Jamaica ginger' is selectualled as an intoxicant.

"The physiological effects and the therapeutical properties of wood alcohol have not been fully investigated. In general it is stated that the actions of wood alcohol resemble those of grain alcohol; that the stage of excitement is more marked in the case of wood alcohol; that the subsequent stages succeed one another more quickly; that the effects do not pass off as readily. Much remans to be accurately determined, however. The mean toxic dose of wood alcohol is considerably less than that of grain alcohol—it is stated at about three-fourths or probably less; the effects of its continued use seem to be much more disastrous. The effects, post mortem, resemble those produced by acute poition of the property of the pro

### SANITARY MONEY.

THE substitution of aluminum tablets for paper bank bills or government notes is advocated on sanitary grounds by A. L. Benedict in The Medical Times, March. Says this writer:

"Probably every one with a modicum of esthetic taste, not to mention sanitary information, has been disgusted with the filthy condition of our paper currency. It is impossible to say just how much disease is transmitted by this medium, but the impossibility of quarantining against currency, the failure of the Government to establish accessible offices for the redemption of infected or obviously dirty bills, the many hands through which they pass, and the common custom of moistening the fingers with the lips and tongue, in counting rolls of bills, leave no reasonable doubt that diphtberia, the exanthemata, tuberculosis, and other diseases are frequently communicated in this manner. Some physicians are said to wash or actually to disinfect paper currency, but they certainly can not refuse to accept dirty money nor can they disintect their pocketbooks satisfactorily, and most of us realize the utter impracticability of precautions against this mode of transmitting disease.

"Coins are less readily infected, and most metals—notably shiver—are actually attisptic even in the elemental state; yet coins are too little portable and too liable to accidental loss to answer the prime requisites of a medium of exchange, except for small amounts, a fact revegnized by the limitation of the amount for which they are legal tender. A newspaper critic has called attention to the fact that 'ersp' bills are mainly affected by rictitions personages in movels who give them to newsbuys, deservuniversally regarded as a nuisance by persons in real life, their sole mitigating quality being their cleanness.

The recent introduction of aluminum as a substitute for cardboard, and its adaptability for receiving almost any kind of marking known to the graphic arts, as well as to the art of engraving or stamping metal surfaces, suggests that this metal might well supplant our familiar paper currency. The present bills are almost universally folded into fours. Aluminum sheets of a corresponding size would be neither bulkier nor heavler than our present bills, and the practicability of using sheets of this reduced size is established by the precedent of the fractional currency used during the Civil War and until the resumption of specie payments by the United States. An immense amount of time and of losses by miscounting would be saved by the use of sheets not requiring folding and unfolding and not especially liable to stick together. Aluminum sheets could also readily be perforated for ready determination of value and the prevention of fraudulent alteration of denomination, as is the custom in regard to checks; they could not be cut and pasted so as to make seveneighths of a bill pass for an entire bill, and they would be redeemable after exposure to water and a degree of heat which would destroy paper money. Unlike paper, aluminum not only presents a surface for impressions by the engraver, but it may actually be stamped or cut, like a coin. Aluminum is itself quite resistant to attrition, and by suitable alloy it may be rendered almost absolutely proof against ordinary wear,"

Antidotes to the Poisons of Disease,—Interesting experiments on the neutralization of disease toxins, made by Mme. Sieber, professor at St. Petersbarg University, are described in the Revue Cidebale des Niemes. "The author has been applied to the Neutralization of Neutralization Neutralization of Neutralization Neutralization of Neutralization Neutralizati

tetanic toxins is not less energetic; thus the same does of calcium binoxid will neutralize nearly 1,000 fatal doess of either toxin. As regards oxygenated water it can not be used in large doess, as it is poisoaous; but in very small doess it neutralizes 600 mortal doess of diphtheritic toxin. The same is practically true of the oxydases, except that they have no action on abrin. It is an interesting fact that the pare to action on abrin. It is an interesting fact that the neutralizing action of the oxydases on toxins shows itself not only in the laboratory test-tube, but also in the living animal when the mixture of oxydase and toxin is injected as soon as prepared, and even in cases where the two substances are injected in different parts of the body."— Transitation made for Tile Latranary Discase.

# AN ICE-BOAT FLYING-MACHINE.

A RECENT attempt to solve the problem of artificial flight made by W. Kress, a German engineer, is described in The Scientific American Supplement (March 1). Kress has labored for twenty years on an aeroplane which consists of an iec-boat having two koels and a long stem. It is described as follows:

"The keels served as ranaers when the machine is travoling over ice or snow. Two resilient sail-propellers, rotated by a

KRESS' AEROPLANE, STARTING. Couriesy of The Scientific American.

benzin motor in opposite directions, drive the apparatus. Above the boat, arched sails, coastituting resistant kite surfaces, are carried, one sail being mounted somewhat above the other, so that it will receive an impiaging body of air without interference from the other sails. The aeroplane thus constituted is guided by a horizontal and a vertical rudder, both of which, however, are used only in flying. Owing to lack of funds, the inventor could not equip his air-ship with a benzia-motor of the special construction and power desired, and was therefore compelled to use an ordinary automobile motor. Thus fitted out the aeroplane was first tried on water. For it is Mr. Kress's opinion that watertrials should first be made in order to ascertain whether the motor, propellers, rudders, and other parts have been properly arranged and are trustworthy and perfectly efficient in operation. Only when the safety of the machino has thus been proven should aerial flights be taken. The sense of security obtained by aumerous water-trials and the increased speed attained with each trial will finally give to the aeronaut that confidence which will enable him to soar aloft. That moment, according to Mr. Kress, may come unawares; the ship may of its own accord loave the surface of the water. So far as the preliminary watertrials are concerned, the Kress aeroplane scoms to have met its inventor's expectations. In the presence of an officer of the aeronautical division of the German army the flying-machine was taken from its housing and carted to a nearby lake. Kress seated himself in the boat and pulled the starting-lever. The propellers drove the machine along at a uniform speed, according to the accounts which have been received. In order to test the maneuvering power of the contrivance Kress is said to have performed various evolutions and to have succeeded oven making headway against the wind. The steering apparatus seems to have acted efficiently. The motor, however, proved inadequate. With a motor of less weight and greater horse-power the inventor believes that his flying-machine would be an assured success.

### ORIGIN AND PROGRESS OF SCIENCE.

In a recent work entitled "Ethnic Psychology" (Paris, 1901), M. Charles Letourneau presents some interesting ideas regarding the first appearance of scientific thought and investigation in the human race and regarding its present status and future prospects. We quote the following from a review of M. Letourneau's book published in the Revine Stantifique (February 1):

"It was in the primitive clan, at once school and workshop, that nam begas to acquire all that distinguishes him from the lower animals. During the long sociologic stage of elan life, our ancestors became the possessors, in particular, of morality—that is to say, of the mental impressions, teaacious and hereditary, on which still are based the clearest of our attriusic feeling—the noble tendencies that lead the most generous of us in many cases to subordinate our personal interests to the general good, and that inspire us with instinctive repulsion for certain acts that are harmful to society. The narrow solidarity of elan life that are harmful to society. The narrow solidarity of elan life licens. Then the human mind began its characteristic evolution, besing through the mythical place."

This initiated what the author calls the "duel between faith and reason," a condition "eminently unfavorable," he thinks. to the development and extension of science. How, then, are we to account for its advances? M. Letourneau remarks, says his reviewer, "that we can not invoke the aid of progressive selection in the Darwiniaa sense, since, on the contrary, all moral and social forces have been arrayed against truth. In the great Eastern countries, similar the less rigorous conditions have paralyzed all boldness of thought and all scientific investigation. We must therefore conclude that the peoples of Europe are eadowed with more hardy minds than those of other races." M. Letouraeau believes that the verities that science has established so firmly as to defy all criticism are as follows: "The indestructibility-that is, the eternity-of matter; the demonstration that light and heat and all forces are but simple modes of motion; that the essential phenomenon of life reduces to a double exchange of matter within the organized substance: that without the necessity of invoking instantaneous geologic revolutions and magical creations, the living species of animals and plants have been produced slowly and successively throughout the ages; that conscions life is a function of the nerve-centers." The evolution theory is the crown of the work. Still, the author reminds us, the great mass of mankind is still "below the scientific horizon." There may be backward movement, therefore, and such retrogression has even been predicted by the English authropologist Tylor. Too much light, however, has been shed on the world to admit of "its extinguishment everywhere and forever."-Translation made for THE LITERARY DIGEST.

Value of Rest.—That brief periods of work at the highest possible tension alternating with longer periods of rest or changed activity represent the best working conditions is asserted by Dr. Alexander F. Chamberlann, in The Popular Science, Monthly (March). He finds evideace to support it in studying separately the life of the animal, the child, the genius, the criminal, the savage, and the race, and he believes that the experience of other than unere professional athletes, the methods of animal trainers, the results of half-time schools, the progressive reduction of the hours of labo for workingmen and supe-employees.

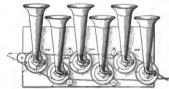

will furnish many more data of the same kind. Says Dr. Chamberlain:

"It has been argued that two hours physical labor for diew would suffice, were the product economically distributed, to keep the whole world well supplied, so great has been the advance in labor-saving machinery, methods of transportation, etc. Is it altogether unreasonable to suppose that two hours intellectual work, under right conditions and with economic distribution of the product, would suffice to keep the whole world supplied here also? Two hours of every one's best would be something worth this is the ideal to which things are bound to tend. Some poet of the future may be able to sing: Better the New World hour than the long European day. The racial nervousness of the American people, non-pathological in reality, is perhaps the groundwork for this achievement."

### A MULTIPLE GRAMOPHONE.

M. UCH of the strained and unnatural quality of sounds reproduced by the ordinary gramophone, especially in the case of the human voice, is due to the fact that in order to make the reproduction as loud as possible the original must be the result of abnormal effort. This has been remedied by a device described in *The Electrical Review* (March 8), due to Emile Berliner, of Washington, the well-known inventor. Says the author of the description above mentioned:

"He provides a machine made up of a number of separate gramophones, all of which may be operated simultaneously. As is well known, gramophone records are exact duplicates of each

IMPROVED GRAMOPHONE.

Courtesy of The Electrical Estricty (New York).

other even to the minutest detail, and as such are made in large numbers. The only difficulty to be overcome in operating several is to have them exactly register with each other and be operated simultaneously. He provides a table or support upon which are mounted a number of rotary tables of the usual gramophone type and adapted to receive the well-known record tablets of commerce. These tablets are generally arranged in a staggered row, each being supported on an upright spindle or shaft journaled in a standard fastened to the table. Upon each shaft just below the table is secured a disk having equally spaced radially projecting pins on its periphery. The disks are all of the same size, with the same number of pins, and they are driven together with the tables at the same speed by means of a belt, having perforations spaced to fit the pins and operated by a motor of any desirable construction. . . . The registering devices make it possible to insure the contact of each stylus with a corresponding point of each record by the mere act of placing the stylus on the proper line. Power being applied to rotate the records, identical sounds issue from each of the horns, and the combined body of sound may be made as great as desired by using an appropriate number of records. Therefore, it is possible to provide an exact reproduction of the human voice or to make it louder or softer."

Hibernation among Russian Peasants,—To accustom themselves to hunger and to the absence of food, the Russian peasant practises a sort of hibernation, says a curious note in L'Anthropologie. "As soon as the head of the house discovers that the quantity of rye on hand is not sufficient to last out the winter, he arranges to limit its consumption. . . The where he had sleeps for the greater part of the next four of five months. In order to economise the animal heat not lo limit as much as possible the necessity for food, all movement is restricted to what is absolutely necessary. The enstoned is restricted to what is absolutely necessary. The control most imperative want is permitted to disturb the slumber, and immediately all is silent again."—Translation made for The LITERANY DIOSEST.

# A NEW ALLOY FOR METALLIC MIRRORS.

A NEW alloy of aluminum is announced that is especially anited to use for mirrors, owing to its ability to take a very high polish. Metal mirrors are still used in the arts, especially in the construction of fine scientific apparatus, and it is probable that the new substance will find an extended use. In Science (Hastrice (Kovember 9) M. M. Molinie writes of it as follows:

"Besides their use in the toilet, polished metal mirrors are incontestably superior, for use in optical apparatus, to those of silvered glass or glass covered with tin amalgam.

"The surfaces of these last are open to the objection that they have two reflecting surfaces, one due to the netal, the other to the glass, and that the reflected rays are optically altered and colored, preventing proper observation in many cases. These instruments of precision give to metallic mirrors their einterest, since the glass industry is now able to furnish ordinary mirrors at a very low price.

"An alloy or metal to be used for mirrors must be susceptible to perfect polish, must be light, hard, and not acted on by the air so that it may preserve its brilliancy. It must be with: so that the images will not be colored, and it must be easily worked in all forms, concave or convex, required by the theory of the instruments. Up to the present time, the metals most used for this purpose have been from, gold, and silver."

The new alloy spoken of is magnalium, a combination of magnesium and aluminum. The two constituents are used separately, and the liquid aluminum is poured into the magnesium, heated to 650°. This alloy has the lightness of aluminum, the quality of metring at about 650° to 750°, and that of casting casily, besides having a very great resistance to reagents.— Translation made for Tu Eurapax Diotsy.

### SCIENCE BREVITIES.

"This on account of the physical conformation of her shoulder that a quit one ever hope to throw like a boy," asay Relath (Gooden). "This is with one of the physicians of a girls' college gives as the result of his deep and prolinged everaging on the 100 plott. "It is a physical impossibility for prolinged everaging on the 100 plott. "It is a physical impossibility for a prolinged everaging on the 100 plott. "It is a physical impossibility for a prolinged everaging of the 100 plott. "It is a physical impossibility for the 100 plott." It is a possible with a hop, because her collinous is larger and sets lower than a boy's. In other sports where this colling is a prolinged everaging the province, and the may a well give on all hope of ever learning to throw."" excell, but the may as well give on

"PRINCE HINRY of Germany has completed his rapid and extensive toor without the least failure on the part of the raifroad companies," says The Raifmay and Engineering Review. "He can hardly fail to have been impressed with the perfection of the railway service; and it is understood that his comments have been of a most favorable nature. There has been tree and extent have precalled, to the great interruption of railway traffic. He missed it all, however, and met with no annoying delay anywhere have been an extended to the companies of the precausal of the bounder that program of collast no inclosed among twery when he had not been carried out no exactly is a little remarkable, even under the great cate given by railway manages throughout the entite

It is noted by The Elicitrical Review that electricity made as usuanility good abound as the "captains of industry "Insubence to Prince Heart. It was: "Among the electrical men present were founders of the industries properties of the properties

# THE RELIGIOUS WORLD.

# IS SELF-SACRIFICE OR SELF-DEVELOPMENT THE IDEAL OF RELIGION?

THE problem suggested by the opposing ideals of culture and restraint is the subject of a book (reviewed in our columns last week) by the Rev. Hingh Black, an Edinbargh Presbyterian clergyman. According to The Brittis Week'y (London), "no religious book of late years has been so much noticed and commended alike by literary critics and Christian critics of all churches" as this. Mr. Black states the problem, which he declares to be "the problem of nll religion," in the following words:

"Should a man obey his nature or thwart it, seek self-limitation or self-expansion? In some moods it appears to us as if the best attitude, as it is certainly the easiest way to peace, is to accept simply what seem the surface facts of our nature, and give up the long passion of the saints after the unattainable. Yet in other moods we recognize that life gains in dignity and solemn grandeur when a man realizes even once that for him in the ultimate issue there are in all the world only God and his own soul. We no sooner take up one of the positions than doubts pervade the mind as to its sufficiency. If we say that the secret of life is just to accept our nature and seek its harmonieus unfoiding. immediately the question arises whether self-culture is not only a subtle form of self-indulgence. If again we make renunciation the infallible method, we can not keep out the question, whether it is not moral cowardice that we refuse to live the larger life and to wield the wider power which culture seems to offer.

Matthew Arnold defined culture as "pursuit of our total perfection by means of getting to know, on all matters which most concern us, the best that has been thought and said in the world." He assumed that we might reach perfection if we only were able to know. But, according to Mr. Black, "life is bigger and more complex thau that would make out." He continued.

"Mere cultivated intelligence is no safe guide, as could be illustrated from the biographies of the most eminent apostles and the most diligent disciples of culture. In finding our way about amid the mysteries of the world and the practical problems of life, merely through getting to know what others have thought and said, the it be the choicest thought and the pobjest speech. there is no guaranty that our acquired information will avail much for our particular difficulties. And even the light that is in us may be darkness. . . . While self-culture is a legitimate and necessary aim, it is not a complete end for human life. It is only one side, tho a very important one, and needs to be supplemented and raised to a higher point and used as a means for a larger end than itself. Only this can save it from the inevitable degradation that must befall it, if it remain on the lower level as an ideal for self. Not even its achievements and conquests, not even creative genius in art and brilliant discoveries in science, can suffice for life, if there be not an inspiring force grander than the desire to reach self-development."

If culture as an ideal is a failure, so also, contends Mr. Black, is asceticism, for asceticism, by using methods only of repression and restraint, "withdraws attention from the true seat of sin, which is the human heart, and transfers it to what is really external to the life." The author eves on to say:

"To have as weapons only negative prohibitions is to fight a loging battle. The assetic method is but another form of externalism, which is the curse of religion. Tho it seems to begin in contempt for the external side of life, as a matter of fact its fundamental mistake is that it exaggerates the external. It sets too much stress on mere surroundings; for true life is possible anywhere, and evil is not confined to particular spots. Temptations, threefore, are not killed by creating a desert and calling it peace. Humility may be found on the steps of n throne, and spiritual proted can kill the soul of a soltary desert sain or the application of the step of the strength of the s

gratifications which our nature craves; and it is, to say the feast, a calamity to look upon religion as a sort of moral police, saying, "You must not do this." Virtue, it is true, will always have a negative side; religion will nlways seem self-denial; but that is not the essence either of wittee or religion.

Mr. Black believes that the Christian solution of the problem presented lies in accepting neither culture nor asceticism as ends in themselves, but rather in grasping what ench asserts, while rejecting what each denies. He concludes:

"Culture for its own sake, and sacrifice for its own sake, are neither a sufficient end, but they each find scope and are made reasonable by the great Christian thought of service, which reconciles so many difficulties which meet us in this whole region. With such a dominating motive as service there will be room for all types of personality, and for all individual enpacities, however divergent. We will see the need of self-restraint, discipline, and the sterner qualities, supposed to be associated only with Puritanism; and, on the other hand, if we recognize that the end of all our training of our powers is for service, we will not limit the thought of service, as narrow Puritanism so often did. We will know that it takes all sorts of men to make a world; and if they be true men serving the common weal according to capacity, it does not matter much where and how they serve, or in what department of work. There are many and various kinds of service; and their rank is settled, not according to the type of work, but according to the spirit in which it is done. It is not dull uniformity in what is called charitable work that is needed, but spiritual consecration that will make all work sacred because inspired with a noble motive. .

"It is religion man needs, not culture in iself. So the birthplace of modern civilization is not Athens, but Calvary. The 'pale Galilean' has conquered against all the full-blooded gopels of the natural joyof life, but conquered in the grandest way of conquest, not by the extermination of the epponent, but by changing the enemy into a friend. When the sons of Greece are not against but for the sons of Zion; when all ideals of culture find their inspiration and nourishment in the divine ideals of Jesus, and take their place in the great, loving world-purpose of the world's Savior; when thought, and art, and literature, and knowledge, and life are brought into subjection to the obedience of Christ, that is the true victory."

# A ROMAN CATHOLIC PLAN TO ACHIEVE ANGLO-SAXON UNITY.

M.R. ROBERT STEIN, of the United States Geological Survey, a well-known arctic explorer as well as a student of social and religious questions, makes a suggestion on behalf of Anglo-Saxon unity which he believes, if carried into effect, would "achieve in a moment what parliaments have labored in vain for a century to achieve." His proposal is simply that the heir-apparent to the British throne should renounce the anti-Cathoin declaration which every English moracch is at present compelled to make upon his accession. Writing in The Anglo-American Margazine (New York and London, March), Mr. Stein says:

"Whoever believes that the best good of humnnity is bound unwith the union of ail English-speaking nations, and looks upon this as the supreme interest of the day, must feel alarmed at anything tending to estrange a section of the English-speaking world. The forces that tend toward union are none too strong at hest. The transition from 'indefinite, incoherent homogeneity to definite coherent heterogeneity' seems much slower than is compatible with the safety of the organism in view of the hostile elements around. One can not but grow indignant, then, at the perversity which deliberately insists on the retention of sq dangerous a source of discord as this anti-Catholic declaration. We have heard it repeated till we know the phrase by heart, that religious feeling is one of the most potent causes of animosity among men, and thus it seems incomprehensible how those who profess to aim at union can continue to demand that the sovereign at his accession shall pronounce words which brutally wound the religlous feelings of twelve millions of his subjects. . . . Everybody knows that the hostility of the Irish-Americans is one of the main obstacles to closer Anglo-American union, and thus, when some people on the other side of the water are seen trying not to placate this hostility but to feed it with the most inflammable of fuels, it seems no exaggeration to say that they are worse enemies to Anglo-Saxondom than Pathan or Boer."

From all parts of the world, declares Mr. Stein, have come the strongly worlded protests of Roman Catholics against the "heinous blasphemy" of the English coronation outh—an oath which "gibbets the very two beliefs on which Catholics are most trembingly sensitive: the sacrament of the Eucharist and the veneration of the Mother of God." Nothing would propitiate the Roman Catholics of the British empire and, indeed, of the whole world, observes the writer, nothing would tend to draw the Anglo-Saxon nations together in bonds of comity, more thoroughly than would a renunciation of the anti-Catholic cath. He concludes:

"There is said to exist in England a feeling that the crown has not enough power. The scatch African Magazine (Catholic) says: 'The crown can not move in the matter.' This, to a foreigner, seems surprising, since it is the king whose conscience and self-respect are vitally interested in the matter. 'King insect to mean 'leader': has it come to pass that the king must always be led? Here is an opportunity to restore to the word its ancient meaning. The heir-apparent, sharing his father's rejugnance to anything ungentlemanty, is said to have referred, with generous midseration,' to 'that horid onth.' If he were to the word to the word of the word o

It is pleasant, even in anticipation, to unagine the joy which the news would bring to the Catholics of Canada, Australia, and South Africa. The fervor of loyalty thus kindled may be a factor of no little importance when the practical solution of the problem of imperial federation is taken in hand. The good-will of the eighteen million Catholics in the United States may be of decisive influence in any endeavor to promote the cause of the Anglo-American alliance. Then there is the alliance with Germany-the Older England, as Green affectionately calls it-an alliance so earnestly advocated by Sir Henry M. Stanley, and so natural that in point of fact there is not a single instance in history where Englishmen and Germans faced each other on the battlefield, while in most of their battles the two peoples fought side by side. If it be desired to render this natural alliance formal and perpetual, the good-will of the powerful Center party in the Reichstag will be of essential moment. All these happy results, however, will be small compared to the conciliation of Ireland. . . . If the heir-apparent, as above suggested, were to announce before an assembly of Irishmen his determination not to submit to the foolish statute that would force him to insult their religion, it would startle the Irish nation as the 'sweet bell' which, according to the legend, is to proclaim to their isle a reign of 'peace and love.'

A Chalienge to the Higher Critics.—The Rev. T. T. Eaton, LL.D., editor of The Western Kenoder (LouisvIlle, Bapt.), is a theologian of the "old school," and he never lets pass an opportunity to refute the arguments of the higher critics. He has lately issued to them a challenge to give to the world an "up-to-date Bible" which shall bear comparison with the original Scriptures, and be deems this a not unreasonable request, if it be true that "God has by no means confined His inspiration to those who wrote the Bible" and that He has "inspired men in all ages as truly as He inspired the prophets and apostles." His arguments are elaborated as follows in The Watchmun (Boston, Bapt.):

"The modern school of theologians hold that the Bible was written between 80 n.C. and 100 or 150 a.D. So that in the Bible we have the words of great leaders on the problems of religion for 900 years. This school regard the Bible as of great spiritual value, but as having the defects of the thinking and the beliefs of the men of the tumes in which it was produced.

"If these things be true, it necessarily follows that we ought not to be dependent for our Bible on men that lived between 80 s.c. and 100 A.D. Surely in all these 1.800 years, with the wonderful progress man has made along all lines, with the correction of so many crude and erroneous teless held in the long ago, surely a better Bible can be gathered from the words of great leaders about the problems of religion, during the past 1800years, than was gathered for the 900 years previous. To admit that the thoughts of the leaders in regard to religion between RC. 800 and A.h. 100 are superior to the thoughts of the leaders in these last days is to surrender the whole case of this modern school of theologians. And just as editors and redactors gathered (according to this modern theory) the good to give the world our Bible, so let this modern school furnish some editors and redactors who will gather the good things about religion in modern literature, and give us a Bible that shall be up to date. This new Bible ought to be as much better than the one we now use, as our times are more enlightened than the times of the prophets and apostles.

"While myself holding to the old view of the exclusive inspiration and the authority of the Bible. I yet would be very glad to see the up-to-date Bible, and I believe it is incumbent on the theologians of this new school to furnish such a Bible to the world, so that it may be compared with the Bible of our fathers, and that the theory of modern inspiration may be put to a scientific test. . . . And can any one imagine a good reason why it should not be furnished? Ought not the world to have the best Bible possible? May we not hope that this new school of theologians will give us an up-to-date Bible?

# THE STUDENT VOLUNTEER CONVENTION IN

THE Fourth International Convention of the Student Volunteer Movement for Foreign Missions, which was held in Toronto on February 26 and four succeeding days, is described by the Boston Congregationalist and Christian World as "the greatest student convention in history." In even more enthusiastic words a correspondent of the Chicago Interior (Presb.) declares it to have been a meeting which "compassed greater Christian potentiality than any other assemblage ever convened on this continent." The convention represented twenty-two countries and four hundred and sixty-five colleges, and was attended by nearly three thousand delegates. Of these, 2,206 were students in universities, colleges, medical schools, and theological seminaries; 217 were professors; 82 represented mission boards; 107 were veteran missionaries; 70 were secretaries of Young Men's Christian Associations: 28 were secretaries of Young Women's Christian Associations; 28 were editors of religious papers; 15 represented young people's societies; and 42 were graduate volunteers. The following account of the convention is condeused from The Congregationalist and Christian World:

The world has never seen an assembly of Christian students comparable to this in size, intelligence, breadth of denominational relationships, and definiteness of missionary purpose. It requires four years to pave the way for such an epoch-marking gathering, and it will be ten times four years before the enthusiasm crystallized and generated at Toronto will spend itself. Many a college student from Maine to California is resuming his wonted tasks with the touch of a deep spiritual experience upon him; and while the managers of the convention steadily refrained from undertaking to hasten life decisions at this meeting, preferring not to count on the excitement of the hour, five, ten, or fifteen years bence scores of the careless, happy students who went up to Toronto hardly grasping the significance of the gathering will be found as its outcome in the heart of Africa, in the ancient cities of the East and in far-off islands, preaching teaching, and living Christ's Gospel.

The only convention comparable to this was the Ecumenical Conference in New York in 1900; yet, as the Rev, John Potts, D.D., said, the Ecumenical was largely historical; this convention is prophetic, not alone of the forward march of Christianity among the nations, but of a virile and aggressive Christianity here at bome in college and in church. John R. Mott, fresh from his missionary trija around the world, was the central figure of the convention and acted as its chairman. Other prominent figures on the platform were Vice-Chairman J. Ross Stevenson, recently

called to the Fifth Avenue Church in New York, and Robert E. Speer, of the Presbyterian Board of Foreign Missions. Above their heads stretched in big letters the moto of the movement, "The Evangelization of the World in this Generation."

The heroes of the guthering were the missionaries. Bishop Thoburn, of India, spoke several times, Dr. W. S. Ament, Prof. F. D. Gamewell, and Mr. and Mrs. Howard Taylor, ail of China, were warmly weckomed, as were Janvier of India, Underwood of Korea, and Hotchkiss of Africa. The Rev. George Scholl, D.D., of the Lutheran Church, offered counsel regarding the physical and mental equipment of the nissionary; and John W. Wood, of the Episcopal Board of Foreign Missions, spoke cocentiv on the nower of the printed nace.

Mr. Mott's appeal for funds for the next four years was rewarded by pledges of over \$15,000, and at the close of the convention 100 young men and women stood to declare their purpose to go out us missionaries during the course of the present year.

The convention, remarks The Independent (New York), "sounded the strongest call yet uttered for volunteers and recruits for the foreign field, and gave evidence of such a response to that call as the world has not yet known." The Christian Guardian (Toronto) comments:

"The time was with some of us, and, no doubt, still is will some, when the movement was looked upon as an aggregation of youthful enthusiasts and irresponsibles, whose ardor times would cool, whose aims were largely in the air, and whose edits we would be, in the main, abortive. Last week taught us, if we had not learned before, that the Student Volunteer Movemet had not learned before, that the Student Volunteer Movemet as a federation of thousands of the brainiest and best educated of the young men and women of every Christian land, under and and sober yet consecrated leadership, who have begun to realize the what the Master's great command really means, and, in the face of the world's great need, have set themselves for its fulfiment."

The Boston Transcript expresses the belief that such gatherings can not fail to make strongly for Christian unity, It continues:

"Men and women who, while students come up from all sections of the country; all the sects, all the colleges, all the various denominational training-schools, and sit together and discuss the broader and deeper problems of Christian propaganda, can not return home as sectarian or provincial as they came. With diminished sectarian spirit they later leave for the mission-fields one by one, as their education is completed, and as they receive their appointments from the various missionary boards; and once on the field and at work they carry into the work in foreign lands the same spirit of toleration and unity of action. This explains in part why it is that during the past decade there have been so many forward steps on mission-fields for unification of Protestant mission work, and why it is that at the present time essential Christian unity is farther advanced in Japan, India, China, and Africa than it is in the United States or Great Britain.

A Protest Against the "Christening" of Yachts.—Apropos of the launching of the German Emperor's yacht Meteor, a Brooklya pastor, the Rev. Dr. Arnold W. Fismer, writes to the New York Times to protest against what he terms "the obvious inappropriateness in the use of the term 'christening' as designating the initiation ceremony associated with the naming of a yacht preliminary to her virgin plunge into the water." He says:

"The term itself is as pure and harmless as the ceremony is in itself simple and harmless, but to 'christen' a yacht is, if not sacrilege, at least genuine nonsense. There certainly can be no greater misuner than to call the naming of a ship a christening. In its etymological and historical signification, 'christen' simply means to Christians' or to make a Christian.

"When Miss Alice Roosevelt solemnly and reverently said,
'In the name of the German Emperor I christen this yacht Me-

Icor, 'did she really mean to say what she actually did say? Did she make a Christian of the Meteor?

"Some day, when exact thinking demands exact expression, the higher critics may yet eliminate from the annals of our history the inspired account of this picturesque incident on the ground that the miraculous, instantaneous evolution of an imperial yeach into a Christian is absurd and incredible.

"Wity, then, use a sucred name for a wholly secular performance? Our awage forefathers poured innocent human blood over tite stern of the boat, believing as they did that the good spirit of tite innocent sacrifice would enter the craft and propritate the evil spirits of the waters. This barbarous supersition is now of course no longer induged in—a find less objectionable, but not quite so innocent, is now used; nothing remains but the sentimental form deprived of its content and its purpose. To save its reputation it is given a Christian name, which it does not deserve."

### IS IT SENSIBLE TO FAST?

TillE customary observance of Lent in religious circles during this season of the year has brought up for discussion the old subject of fasting and of how far such self-denial has a place in the Christian life. There is no doubt that during receut years the practise of fasting has declined in the Protestant churches, and the following letter, signed by "A Liberal Catholic" and addressed to the editor of The Irith World (New York), would seem to indicate that even among Roman Catholics the church rules regarding fasting are not very strictly observed. The writers says:

"I am a Catholic, but there are some things the Catholic Check that I can not understand. Such, for instance, as the obligation of fasting on certain days. Frankly, I do not see the sense of this thing. How can punishing the body and injuring the health benefit the soul or please God? And how can fleah meat be good on Monday and bad on Friday? These monkish practiess, coming down from medieval times, ought not to apply to the enlightened twentieth century. I am a Catholic, but I hold myself free to eat meat any day the dog eats it."

To which The Irish World replies that "the man who says he is a Catholic and who contemus Catholic doctrine does not know himself. . . To accept some of the church's teachings and to reject others is to cease to be a Catholic." It continues:

"1. Fasting did not originate in the Middle Ages, nor is it an invention of the monks. It was ordained by God thousands of years before the Middle Ages. It was not abrogated on the introduction of the new dispensation. Christ himself fasted, his disciples fasted.

"2. The Catholie Church does not say that flesh meat is bad on Friday or on any other day. The precept which relates to abstinence looks speciality to the subduing of our carnal desires, particularly in penitential seasons. On a joyous holy-day, as, for instance, Christmas, to partake of flesh meat is quite permissible even if the day falls on Friday.

"3. In ordering fasts the object of the church is not to debilitate the body, but to give health to the soul.

"4. If, however, a man's physical condition is such that, in his opinion, he can not fast without detriment to his bodily health, he will, as a sensible person, consult his physician, and if the physician indorses his opinion, that man, on submitting the state to his confessor, will have no difficulty in getting a dispensation. But for a man to act solely on his own whim or taste in an affair of this kind is to show contempt for the church, and contempt for the church is ever a prelude to apostasy."

Putting religion and heaven out of consideration, says the same paper, much can be said in favor of fasting on purely hygienic grounds. We quote again:

"That abstemiousness conduces to health of body and fasting to clearness of mind are facts well attested. The consessus of reputable physicians is to this effect. Rich foods breed diseases and glottony clogs the mental faculties. Who ever heard of a gourmand that distinguished himself in science, art, or literature? All the really great men in history were abstemious men. The best books hav'been written on empty stomachs. The pro-

foundest depths in philosophy, the highest flights in poetry, have been reached, not at the table but in the fasting state. Homer, sightless and foodless, is an instance. Had he fared sumptuously every day we should never have had the Ilind. Edgar Allan Poe, Burns, and Mangan are in a like emegory. Imagine Shakespeare in the midst of his immortal soliloguy, 'To be or not to be," interrupted by his wife with: 'What will you have for dinner to-day, William? Wouldn't it jar him? No. men of mind don't make bread-baskets of themselves. Benjamin Franklin, the embodiment of common sense, was abstemious, and Thomas Jefferson has told us that 'no man ever regretted eating whereas many have killed themselves cating too much. We are personally acquainted with men who for years have partaken of but one meal a day. They are hale and strong and cheery, and they have no thought of giving up the practise. Some of these men are Protestants, and some don't profess any religion; they fast solely for their bodily health, and they have their reward. Leo XIII, is a notable instance of what a life of fasting and prnyer, with lots of work, will do for a man. He enjoys good health, his eyes blaze with intelligence, and his face beams with a radiant benevolence which bespeaks interior happiness and good-will for all. And now, in the ninety-third year of his age, he is more active and younger in spirit than many a man of fifty. Such a life is a satisfactory answer to the catechism question. Why did God put us here?

What is a man

If his chief good and market of his line

Be but to sleep and feed? A beast, no more.

Sure He that made us with such large discourse,

Looking before and after, gave us not

That capability and godlike reason

To rate in us presede

Man's life on earth is a warfare, continues The Irish World—
"a mutiny of the passions against the reason, the flesh battling
against the spirit and the spirit against the flesh," and no man
is exempt. It concludes:

"Our trials may be great, but certainly they are not greater than were those of the saints. And how did they conquer? St. Paul answers for them all and for all time-'1 clustise my body and bring it under subjection.' And in the close of the war what does he say? Then come the great calm and the spiritual peace and the blessed assurance. '1 have fought a good fight, I have finished my course, I have kept the faith."

# A GERMAN VIEW OF AMERICAN CHURCH

CRITICISM and praise, wise and otherwise, of German religlous and theological thought and life, by American tourists in Europe, are frequent; but it is not often that we hear a critique of American church matters from an educated German, This, however, we have in n "Letter from One who has Returned" (Zurückgekehrten), which recently appeared in the Grensboten (Leipsic). From it we reproduce the following onlinions:

I would not like to repeat what Is hastily claimed by many, namely, that the German is naturally less religious than the Anglo-American. As a rule, this opinion means that the latter is more closely attached to the church organization than is the German. And in this sense the view is certainly correct. All Anglo-Americans and Anglo-Celts surpass the Germans in their subordination to recognized authorities, whether these be persons or societies or unwritten laws and customs, which In turn secure a stronger cooperation of the individual in general tendencies and projects. And in this very thing lies the great strength and the dangerous power of Anglo-Americanism, as all the tendencies that come into the forefront of life are apt to become antional and general. It is not the diversity or the depth of the religious life that impresses the student of American thought and action, but rather its universality and expansivepess. The church associations and denominations are better organized than are even the political parties. In outspoken contrast to this, stand the Germans who are sepurated and divided into infinitesimal sections, not by the power of individuality, but, as we must honestly confess, largely by petty jealousy and spite. There is no doubt whatever that the American and English churchman exhibits a remarkable tendency to practical activity in his religious life. In contrast to the Teutonic tender 'y to penetration and thought in religious matters, the Anglo-American organizes mission societies, engages in proselytism and practical exhibitions of faint. The mission activity of the Irish and the Anglo-Sinson monks through Central, a vribern, and Western Europe in the Middle Ages is as much a pert of nistory as the mission nctivity of the English and the American churches in the eighteenth and the nierceenth centrales, which were in this it are result of the peculiar gift which nuturally all Anglolation of the property of the Control of the Control of the This is the result of the peculiar gift which nuturally all Anglointo action at once. These national characteristics are reflected in their clumb (if and work.)

But to this must be added that religious consclousness has deteriorated in America in recent years even more than in Europe. The break with orthodoxy through more enlightened views of critical and scientific thought has set in later in America than in the Old World, but it has set in all the more powerfully and threntens to tear down all opposition. Rather remarkably, those that have suffered most by this disintegration have not been the larger denominations but the smaller. The rich old aristocratic Episcopal Church has been receiving a large number of recruits from circles where formerly the Methodists and the Baptists reigned supreme. The census report for 1900 shows a remarkable growth of the High Church and the Roman Catholics. But this is no evidence against the general retrogression in depth and expansion of the church life in America. The big cathedrals of these two communions, notwithstanding these accessions, are not frequented any more than were the small chapels of the smaller denominations. Again, the fact that the radical denominations have shown a decrense in strength in late years does not signify an increased depth of religious thought or of positive Christianity in America. It may sound paradoxical, but it is nevertheless a truth, that this fact points to loss of the influence of the churches in America, as it does in Germany, althoin the former country an external connection with the church is maintnined, which is not the case in the Fatberland. But true religious feeling has in both cases gone backward. Altho the symptoms in both cases are different, the trouble is the same, and the form these symptoms assume in America is largely to be ascribed to the influence which the woman exercises in family and public life. She is apt to keep the husband in external church relations long after he has internally broken away from the creed. And another thing must not be forgotten, namely, the external attraction of the American churches, the comfortable seats, the music and the singing, the oratorical skill of the preachers, etc., which as a rule are not equaled elsewhere, Only in church probitecture are the Americans inferior to the Germans,-Translation made for THE LITERARY DIGEST.

### RELIGIOUS NOTES.

THE Lyman Beecher lecturer at the Yala Divinity School this year was the Rev. Dr. Washington Gladdan, of Chimmans, O. The general subject of his six addresses was, "The Pulpit in its Relations to Present Social Conditions."

# FOREIGN TOPICS.

# ENGLAND AND GERMANY ON PRINCE HENRY'S VISIT.

ORGANS of English opinion insist that Great Britain views
Prince Henry's visit to the United States with equanimity.
Thus The St. James's Gazette (London):

"People who think there is the smallest jealousy in England of the friendship between the United States and Germany which the visit of the Prussian Prince is designed to promote are vastly mistaken. No friendliness between nation and nation can ever be distasted it to England when, as in this case, we are well assured that it can have no hostile intention toward ourselves, at any rate on the part of one of the friends."

Prince Henry "accepts the conditions of popularity in a democratic country with frank good-fellowship," according to *The* Standard (London), which adds:

The real significance of royal visits may be exaggerated or under-rated with equal ease. No sober observer, and certainly not Prince Henry himself, is likely to make the mistake of supposing that his stay in the States, however pleasaut it may be to himself and his hosts, can avert the results of any real divergence in the interests of his Fatherland and the republic. The presence of his grandfather at the Exhibition in Paris did not prevent, perhaps it did not even delay, the inevitable collision between France and Germany. There is, however, no such rivalry between his native country and the American republic as divided the two European states. Whatever differences may arise will probably be commercial, and tho they will not be removed by imperial or Presidential courtesies in social life, they are not likely to lead to hostile relations between the governments. Germany has discovered, if she has not always believed, that it is to her advantage to be on good terms with America; while the United States have no wish to be on an unfriendly footing with any other Power.

"The German Emperor is a fountain of striking ideas," says
The Daily News (London), "but he never had a better notion
than that of ordering his new yacht from American builders":

"The Kaiser's yacht is christued. That was the ostensible purpose of Prince Henry's visit. The occasion has been seined to bring about an immense national demonstration of friendliness to Germany. . . The spectacle of international anily is always pleasant, and we forget, white watching Germany and the United States in one another's arms, that they are the most dreaded of our commercial rivals."

The element of carping criticism is contributed by The Saturday Review (London) in these words:

"The success of Prince Henry's visit to America might have been assured without the silly attempt on the part of some Germans to predate their expression of friendliness to a point before the Spanish-American war."

This line is followed by The Spectator thus:

"Why is it that the German press has suddenly gone back to questions of four years ago? There is only one answer. It is because Germany is to-day in communication of a particular kind with the United States. Prince Heinrich has started on a visit to President Roosevelt. There are certain difficulties between Germany and the United States which in the interests of Germany is world-policy have to be smoothed out, and one of those difficulties is Mauila Bay."

The German press is practically a unit in making friendly comments,—friendly, that is to say, to the United States. Even the agrarian, anti-American Kreuz-Leitung observes:

"Germans played a conspicuous part in the American war of iudependence. Among all bodies of the troops Germans were to be met with, while many regiments were composed exclusively of Germans. Washington surrounded himself with a bodyguard made up wholly of German warriors."

The same paper then dwells upon England's "decided attitude against the North" during our Civil War. "On the part of Ger-

many there was great care to refrain from approving England's anti-Union policy." Finally:

"As is well known, there is a conflict of interests between Germany and North America, but the interests are not of a political nature. They are confined to the economic sphere. Moreover, they are not so much between North America and Germany as between North America and Europe. Perhaps a way will yet be found of avoiding this conflict. Perhaps Prince Henry's trip to America may afford the opportunity for this.

The scale on which Prince Henry was greeted was worthy of our country, according to the Vossische Zeitung (Berlin):

"Never before, in greeting and felicitating exaited or eminent personages, has America surpassed the enthusiasms he now displays for Germany. Even the temporary frowning of the elements was powerless to affect this geniality. Indeed, the expression 'Holenoullern weather' has quickly become proverbial. Even the unfortunate fire catastrophe was forgotten in the whirst of festivities, or at any rate was powerless to influence them... An officer of the Prince's suite told the American press that the visit was calculated to promote friendship, based upon mutual exteen, between Germany and the United States. We are certain this end will be attained.

The Hamburger Nachrichten expresses both surprise and amusement at the insinuations in papers like the London Spectator, and the Nation (Berlin) observes:

"This trip [of Prince Henry's] will contribute to the friendliness of the relations between Germany and the United States. Those relations, excepting a few misunderstandings, have been of the friendliest character since the establishment of American independence."

The Social-Democratic press of Germany dissents from the general view, deeming the American demonstrations over Prince Henry unbecoming. Varwārts (Berlin) says:

"The whole business is typical of Germany's political doings. In one form or another such goings-on are constantly repeated, In such a fashion is the destiny of the German people wisely and worthily watched over."—Translations made for THE LITERARY DIGEST.

# THE RELEASE OF MISS STONE.

THE case of the captive American missionary has attracted wide editorial notice abroad. The Daily News (London) says

"And so there is honor among brigands after all, and Miss Stone has been sent into Turkish territory in return for the ransom money. There was some fear lest the brigands might keep both the money and the lady, but they have observed the laws of honor and restored the lady in exchange for the money. The relief which all humane people will feel at this happy termination to Miss Stone's misfortunes will not, we think, diminish the disapproval with which they will regard this extraordinary trausaction. These brigands have now made a tremendous profit out of this affair, and they will not be discouraged from taking other travelers into their fastnesses. In fact, a traveler in Turkey may now take it that he is a highly marketable commodity for any brigand who cares to pick him up. Perhaps the best way out of this economic deadlock will be for the Turkish and Bulgarian governments to show some energy in hunting down these excellent financiers, and perhaps, if they are fortunate, in seizing the spoil which they have obtained.

Some comments, however, are not at all sympathetic, partaking of the nature of the following from *The Straits Times* (Singapore):

"It will be the duty of the United States Government to exact from Bulgaria an equivalent amount, first a substantial sum in compensation for the dastardly outrage upon the lady. From evil, sometimes, cometh good, and one beneficent result of Miss Stone's abduction may be to induce ladies with similar vocations to look about for a field for their endeavors in some vicinity

pearer home than Bulgaria. The United States teems with such fields, and they can be reached by street-ear at a 5-cent fare from almost every hotel and boarding-house in every great city of the Union."

Certain Austrian and Hungarian papers have hinted at bad faith in connection with the uffair. Thus the Pester-Lloyd (Budapest):

"It is noted as a significant circumstance that the Russian diplomatic agent in Sofia, upon offering a liberal reward to a certain individual belonging to the Macedonian secret committee, was put into communication with the brigands and in three days received a letter from Miss Stone herself. Furthermore, not many days ago the present president of the Macedonian committee, Michaelowsky, in a public address at Varna, not only called the members of the secret committee, including their leader, Boris Sarafow, frauds and adventurers, but directly charged them with the abduction of Miss Stone. Michaelowsky clumsily connected the name of Prince Ferdinand, the 'foreigner,' as he called him, with the doings of the secret committee, thereby making a painful impression throughout the whole land. If the secret committee was allowed too much latitude and consideration, the fault is not with the Prince but with the weak minister in whose hands lay the executive authority,"-Translation made for THE LITERARY DIGEST.

### THE LATEST SPANISH UPROAR.

THE general strike that brought everything to a complete standstill in Barcelona recently, spreading to the other cities and culminating in the Spanish ministerial resignations, forms a debated topic in the European press. In Spain the newspapers are discreet, notably the Epoca (Madrid) .

"It is noteworthy that there have been renewed rumors of a Weyler ministry. They have not been received with much favor, since a dictator is

GENERAL WEYLER.

cies. It must be remembered that government by the sword can not be a panacea in Spain, except to those interested inestablishing it. We have had so much experience with dictatorships! For half of the preceding century we have lived beneath military dictatorships, more or less disguised. The proclamation of a state of siege is so frequent that to create an exceptional thing out of it is in conflict with reality. In

Barcelona themilitary power has assumed command and the captain-general rules there. To call for a general government of the sword seems to us sheer excess and over-officiousness on the part of General Weyler's friends."

Instead of rushing implements of war to Barcelona, the Government should have had recourse to peaceful measures, according to the Liberal (Barcelona) :

"There seems to be no possibility of agreement between wageearners and employers. The disorderly, bloody struggle of three days in the streets will be without result because there were nei-ther conquerors nor conquered. The revolt will be put down by force. But there will remain fierce hatreds that must render ordinary life in Barcelona impossible. If the Government can not solve this problem let it get out."

This paper publishes an interview with the captain-general of Barcelona in which threats of severe treatment are made against all newspapers which print false news. Outside Spain there is more freedom of comment. Thus the Pester-Lloyd (Budapest) :

Two special features strikingly differentiate this latest event in Barcelona from its six hundred forerunners in Spain. The first peculiarity is that a genuine general strike, in the fullest sense of the term, was actually brought about. There was not merely a general strike within one trade or industry, but a conplete, united, simultaneous standstill, a cessation of all labor and activity in every sphere of production, manufacture, trade, and industry. Everything ceased at the same moment. Machines stopped; newspapers suspended. . . . The second peculiarity is that the cause of this general strike can not be found in the proceedings of any one class of workers or employees, who wanted better wages or shorter hours and engaged other bodies in a sympathetic solidarity. It grew rather from the universal longing of the cutire populace to better their wretched condition,

These disturbances are gloonly portents in view of the pending majority of the young King of Spain, in the opinion of the Neue Freie Presse (Vienna) :

'It can not be wondered at if princely visits in honor of the King's coming of age are pronounced problematical in Madrid. the assigned reason being want of room in which to entertain the foreign princes with their suites. There must be want of other things than room. There are anxieties in Spain that leave little room or inclination for the preparation of national festivals."-Translations made for The LITERARY DIGEST.

### VICTOR HUGO AND FRANCE.

"11E attention of all France is now fixed upon Victor Hugo, remarks the Independance Belge (Brussels), and opposing parties seem to forget their differences in "worthily honoring the centenary of him who is justly esteemed the greatest lyric poet of the ninetcenth century ":

"The universal homage to the poet is also a homage to France, to the great Latin nation which has played a most conspicuous part in the world, and which, notwithstanding the reverse of 1870, remains a vital factor in world-policy. For some time, especially since the Dreyfus affair, it has been asserted in certain quarters that France may be regarded as a nation in decadence, and that she will not be long in following her Latin sisters, Spain and Italy, into the abyss wherein are engulfed great peoples worn out by the continued effort of centuries. It is alleged that the slight increase in her population, the evident diminution of her wealth, the mediocre results of her industrial action, condemn France to certain decline within no long time. Her early departure from the concert of great European Powers is boldly uredicted. Those who thus estimate things are on the wrong track. They do not consider the remarkable national energy of this French people, which in arts, letters, and science has produced men whose genius is beyond question and who may be accepted as torch-bearers marching in front of humanity. A people which has been the educator of all other, peoples and which is conscious of the strength within it, does not succumb to the stress of young nations whose somewhat feverish activity is so vigorously manifested to-day, , . . At a time when the glory of the greatest Frenchman of modern times is being celebrated, it seems appropriate to turn a little of the admiration due to Hugo upon France herself."

Some of the political groups are trying to use the Hugo demonstrations to further their own campaign for the coming election. According to the violently Radical Intransigeant (Paris) :

"He [Victor Hugo] had an instinctive horror of the Jew, and every time he introduced one into a stage scene it was for the purpose of making him antipathetic. The friends of the traitor of Devil's Island were, therefore, most clumsy in trying to make Victor Hugo out as one of themselves.

Nor is praise of the great writer unanimous in France. The

voice of detraction is heard in the Clerical Correspondant (Paris):

"The chamber, to whom money costs nothing, voted 80,000 francs and the city of Paris 200,000 francs for this colossal apotheosis of a man who was successively Legitimist, Orleanist, Bonapartist, plous, a free-thinker, pensioner of Charles N., per of France under Louis Philippe, courrier of Napoleon III., finally Republican and Socialist, no little conscientious in one party as in another, seeing on all sides only his own infatuated personality, heeding only his immense pride, pursuing only his boundless

Nor does this authority approve of the monument newly erected to the memory of the great Frenchman:

to the memory of the great Frenchian:
"Imagine an enormous and dreamy Hugo, sitting on top of a
granite mass, while four naked women, who represent 'the four

Victor Hugo became the apostle of Social-Democracy, according to a disparaging article in the Journal des Débats (Paris):

winds of the spirit, ' hold palms of glory out to him.'

"All men are practically equal. The differences between them are due to inequality of condition, the source of all evil in societiety. The champion of the insignificant and humble seems not ot suspect that nature is an aristocrat who establishes between men distances greater than have ever been made by laws and manners."—Translations made for TRE LITERARY DIEST.

# THE FEUD IN THE ENGLISH LIBERAL PARTY.

THE divided Liberal party has been plunged into new dissension throughout England by the recent utterance of Lord Rosebery, in which he "finally breaks with Sir Henry Campbell-Bannerman." We quote from The Spectator (London):

"Sir Henry had asked whether he (Lord Rosebery) spoke from the interior of his (Sir H. Campbell-Bannerman's) political tab-

THE WHOLE IS BETLER THAN A PART.

SIR HENRY CAMPBELL-BANNERMAN: "Well, this isn't much use without the other." LOND ROSEBERY: "Nor this."

- Westminster Gazette (London),

ernacle or from some vantage-ground outside. He has a right to a reply, and shall have it without a moment's delay. 'Speaking pontifically within his "tabernacle" last night, he anathematized my declarations on the "clean slate" and home rule. It is obvious that our views on the war and its methods are not less discordant. I remain, therefore, outside his tabernacle, but not, I think, in solitude. Let me add one word more at this moment of definite separation. No one appreciates more heartily than I do the honest and well-intentioned devotion of Sir Henry to the Liberal party, and what he conceives to be its interest. I only wish that I could have shared his labors and supported his policy.' No one can complain that this is not a plain and straightforward way of meeting the issue, and we congratulate Lord Rosebery on having spoken out at last. But he must not rest on bis oars-or rather on his spade. He must follow up his separation from Sir Henry Campbell-Bannerman by boldly demanding the leadership of the party. Of course he may fail to obtain it,

but even if he does he will be no worse off than he is now. He is too big a man to remain an outside critic. As he will not become a Liberal Unionist, he must either lead the Liberal party or a party of his own,—or else retire from public life."

The organ of that branch of the Liberal party which supports Sir Henry Campbell Bannerman, *The Daily News* (London),

"Six weeks ago, after the Clesterfield speech, Sir Henry Campbeil-Bannerman approached Lord Rosebery and asked him to cooperate with the acting leaders of the Liberal party. Lord Rosebery relused. Six weeks have passed, and now Lord Rosebery has made that refusal public. There is nothing new in it, except the publicity."

The Conservative London Times is rather pleased at the situation. It notes:

"Sir Henry Campbell-Bannerman and his friends, our parisimentary correspondent tells us, do not manifest any 'spatial anxiety' to precipitate a trial of strength between themselves and the Liberal imperialists in the House of Commons. They are willing, it seems, to allow weeks to drag on before they are willing, it seems, to allow weeks to drag on before they are cept the defiance that has been fung down to them and bring the controversy to a decisive issue. . . The Liberal imperialists, it is believed, will have agreed upon their plan of operations before many days are over; and, when they have settled it, the sooner they take action and try to frore Sir Henry Campbell-Bannerman's hand, as it is moderstood they intend to do, the better for the canse they have at heart.

The St. James's Gazette (London) thinks it easy to overestimate the importance of the episode:

"What new impulse Lord Rosebery will bring into politics now that he has left his lonely furrow for a place—not in solitude ontside the tabermacle, only the coming year can tell. Perhaps, after all, as the world went round after Chesterfield, the world will go round still after Berkeley Square, and the definite separation which startled politicians last week may be as harmless as that which came about when Lord Rosebery was in pinafores learning to clean his slate."

# THE CABINET CRISIS IN ITALY.

THE excitement in Italian political circles over the resignation of the Zanardelli cablinet and its retention of office at the King's request causes unlimited press comment. The immediate cause of the crisis was the defeat of Signor Villa, the Government's candidate for the presidency of the Chamber of Deputies. Says the Tribuna (Rome):

"The ministry had to resign because its program was repudiated and the majority abandoned it. But no sign, no hint, was given the crown to turn to any one else who could or would form a ministry to succeed the defeated one."

The circumstances leading to the crisis were trivial, in the opinion of this authority:

"The Zanardelli ministry was hailed in December with votes on of secret funds and demonstrations that were, if not an ovarion, at least a favorable omen. Little or nothing has changed since December. Certainly nothing has changed in the policy or program of the ministry. It carried out the experiment of real liberty in internal srfairs. While allowing liberty to all classes bourgeois and proletarian, order was maintained, and the cabinet increased its seal in avoiding conflicts, in restraining with the limits of the law the free demonstrations of all classes of citizens."

But the divorce question was present and had its share in bringing about the present state of things:

"A question that concerns the regulation of the family and of civil society has been agitated throughout the country for the past six months. The masses of the people were stirred up about it, while the Clerical party, enemy of all national civil authority, made the issue a weapon of controversy. The Government deemed it is duty to intervene and make the question its own in order to affirm the authority of the state against the Clericals who attacked it."

The ministry should never have committed the tactical blunder of involving itself with the divorce question according to the Messaggero:

"And what could have induced the ministry to impart a definitely political aspect to the election of a president of the cham-

SIGNOR TAXABLETTI

ber? For some time past the tendency has been to introduce the good custom of government neutrality in presidential elections. . . Last December, after two votes on its internal and external policy, the

. . Last December, after two votes on its internal and external policy, the ministry was stronger than most ministries have been heretofore. Not satisfied with its own situation-oh, endless human insatiability !- it wished to allow itself the luxury of a speech from the throne, vindicating the little that has been accomplished in its first

session and outlining a new program that nobody isked for. In its leap from one session to another, it did not accurately estimate its own strength. It expected to land in a green and flowery meadow and it fell, instead, into a precipice."

The Clerical papers insist that the real troubles of the ministry are the outcome of the divorce bill, altho the alliance with the Socialistic element has something to do with the situation. Says the Vatican organ, the Osservators Romano:

"The real cause of the defeat . . . may be traced to two leading errors in the Zanardelli program. One is the trend of its domestic policy, and the other is its culpable obstinacy in the divorce matter. As regards the first, the ministry thought it had secured the unconditional adhesion and the permanent good will of the most subversive elements, to whom it had sacrificed everything, not only every consideration of good government, but the country's most elementary and most sacred rights of conscience, which revolted against certain baleful reforms. How erroneously the ministry calculated it must have understood when the Socialists in the chamber, assembled to deliberate respecting their own policy, plainly told it that the favorable votes they had given it last June were inspired by the necessity and duty of defending the proletarian organizations and the right to strike.' . . . To prevent the defection of the Socialists, Zanardelli offered them as a pledge the promise of renewed offenses against the church and against the divine law; but the very thing which, according to his own wretched calculations, should have been his anchor of safety has been, instead, the mite that overweighted the ballast,"-Translations made for THE LITER-ARY DIGEST.

### VENEZUELA AND THE FRENCH.

THE announcement that Germany is to withdraw from Venezuelan waters, if well founded, may be preliminary to a French appearance there. Figare (Paris) says:

"The Colombia-Venezuelan struggle that we have been watching for so many months now concerns us more nearly. We are regretfully compelled to say to the belligerents that if we can not prevent them from exhausting their energies in mad disputes, we shall at any rate never allow those disputes to injure our interests. This is a fact which the Venezuelan Government has too often overhooked. Its recent trubbles with Germany will

be remembered. Nor are the grievances which we ourselves bave often called to its attention to be overlooked."

The present French grievance grows out of a loan on mortgage from a citizen of Bordcaux, M. Secrestat, to General Matos, an insurrection leader in Venezuela. President Castro seized the mortgaged properly and interfered with the Frenchman's efforts to protect his interests, according to Figure, which proceeds:

"Castro forgets one thing. The French Government, as he has lately seen, will not tolerate such denials of justice to is civtizens. He relies perhaps upon the Monroe Doctrine and American protection. Vet he is not ignorant of the fact that President Roosevelt said in his latest message that this doctrine in no way menaced European Powers. He is not ignorant of the fact that of all the Powers, France is the one whose relations with the Union are most corolait, that our good faith is not doubted, and that no one in Washington dreams of hindering us from maintaining our rights even in Caracas."

The situation in Venezuela is scarcely of a nature to prevent President Castro from attending to this matter, according to the Venezuelan Herald (Caracas):

"The revolutionary movement has come to a standstill, and in spite of despatches sent from Port of Spain by correspondents who have probably the gift of predicting the future, and who amonuce hattles of which we know nothing, and risings in Guiana which never existed, we can affirm that the country is not yet in the situation which they represent it to be. We do venezuels and that business is flouristing, we do not wish to diagnize the truth. But the fact remains that jealousies have arben among the revolutionary leaders, and that the most comarben among the revolutionary leaders, and that the most comduced is the natural result. Thus far for the liberal revolution. As to the Modulist movement, which took place lately at Maracaibo, it was suppressed within a few bours and its leader, 1pr -1ploc, captured on a house-top. Such is the actual state of

The leading factors in the revolutionary movement were "money, corruption, and bad faith "according to the Republic (Caraca), a government organ. It says that the delay in meeting foreign elamins is unavoidable, but assures all parties that just demands will be met "in proportion to national resources." That the topic is n live one seems clear from this editorial reacure in The South American Journal (London), an investors' organ:

"What Europeans interested in Venezuela desire most to see is that one of the parties should get decidelly the upper hand; if does not greatly matter to us which, so long as it has power to preserve order. So long as the present uncertainty prevails nothing can be done to develop the resources of the country. This is very deplorable, as there is scarcely a richer territory in the world in unurul resources,"—Translation made for Tux LITERARY DIDUST.

### POINTS OF VIEW.

AGRAINA STRUKEN IN GEMANY.—The results of the recent special sections for members of the Reichatag must have taught the Agrainan that they are losing their influence, declares the Frankfurter Zeitang. # NOTABLE BOOKS OF THE DAY.

### ROUGH TALES OF THE ROUGH WEST.

WOLFVILLE DAYS. By Alfred Henry Lewis. Cloth, 5 x 21/2 inches, 311 pp. Price, \$1.50. Fred. A. Stokes & Co., New York.

T was perhaps a mistake of Mr. Lewis to add to a book of short stories so conspicuous a thing as a preface, especially when it shows that his literary self is a little raw where critics have rasped It is to be hoped that he is not going to sequestrate himself in the same class with Miss Marie Corelli, the critic hater. There is no seed of that; his stories are far better.

ALFRED B. LEWIS.

who have lived in Western towns, pretty faithful representatives of life in the unpolished regions of America. It is true they have not that orris flavor which perfumes the style of such tales as, for instance, "Aucassin and Nicolette"; but then the general reader does not care for "Aucassin and Nicolette." and indeed may cast it aside as namby-pamby, whereas he does like a good straightforward story of real life that gives him an insight into the thoughts of any considerable class of persons. "Wolfville Days" may well in-

terest, not merely the young lady out of boarding-school who is enthusiastic over silly historical novels, but also one of Mr. Lewis's despised critics who have read unworthy books until they are jaded. "Wolfville Days" is, in its general spirit, not unlike Wolfville itself. Gentlemen imperturbably kill and are killed. The brains of the foolish bespatter the pages of the book. Throughout

these disconnected stories several characters appear and reappear. The old cattleman tells the yarns, and his stories sound as if they really happened; his characters are lifelike, and his phrases are the most picturesque that have enlivened the pages of a book for many a day. Some of the stories in themselves are tame and backneyed, but even to these Mr. Lewis's flood of metaphor is an elixir of life.

# A LIGHT DRAFT OF STOCKTON.

KATE BONNET. By Frank R. Stockton. Cloth, 71, x 5% inches, 420 pp. Price, \$1.50. D. Appleton & Co., New York.

'HE appearance of a new book by Frank Stockton stirs one to an agreeable flicker of anticipation. But "Kate Bonnet" is not very fruity, and is regrettably thin in the very thing one most desires

and rightly expects from Mr. Stockton. The sub-title is suggestively Stocktonian : "The Romance of a Pirate's Daughter." The story is all that, but it is ton seriously so. Oddly

enough, the broad burlesque of a worthy Barbadoes farmer huying a ship, and embarking on a career of marine criminality, through sheer romantic craving for the whole gamut of iniquity due to the skull and crossbones of the Jolly Roger fluttering at its peak, is not the delicious fantasticality of Mr. Stockton's humorous invention. It is a bald fact. There was actually such a pirate, who, not knowing a topsail from a marlinespike, became "a terror of the seas," a fearfully respected buccaneer, and whose finish was most seemly, since be departed from this life at the end of a rope made fast to a gallows-tree. There is a strong love interest in

this history of Captain Stede Bon-

FRANK R. STOCKTON

net. His sweet daughter Kate has three lovers, one of whom is loved by another girl, who in her turn is adored by a repentant pirate. But Kate's filial devotion surpasses any other love in her heart. She does her best to reclaim her naughty papa, but in vain. He is too fatuously addicted to making people walk the plank, to scuttling ships, and mafooning their hapless crews,

One very amusing episode is where Captain Bonnet, through esprit de corps, visits the redoubtable "Blackbeard," the boss prate of the Caribbean. After he pays him a eall, this "dean of the piratical faculty," who is as thoroughly a professional as Bonnet is an amateur, and who has a vein of odd humor, returns it, and makes Bonnet a captive on his own craft. The odious brute adds to this ignominy by making the humiliated Bonnet "do accounts" on shore | This is really a more affecting passage in his career than his hanging.

Mr. Stockton has an amiable passion for pirates, and has shown what lore he acquired in regard to these erratic mariners by a volume entitled "Buccaneers and Pirates of Our Coast." He doubtless inserted the "Our" into the title with a mild glow of pride, because the American output of this gentry is really a very pretty showing.

# THE OLD AND THE NEW IN WOMAN.

UNDER MY OWN ROOF. By Adeiaide L. Rouse Cloth. 7% x 5% inches, 294 pp. Price, \$120 net. Funk & Wagnalla Company, New York.

"HE person who can read this book and not feel grateful to the author is a proper object for sympathy. It is written in the first person throughout, and if Adelaide L. Rouse is not a woman after a man's own heart, then is her power of projecting herself into the ideal a very remarkable gift.

The story is of a well-balanced woman of to-day, who frankly confesses to forty years and one hundred and fifty pounds of flesh. But she may well do that, with her fresh,

wholesome balance and one hundred and fifty tons of spirit to offset the carnal avoirdupois.

This bachelor woman Honor Sharpe, yearns for her own roof-tree, after "twenty years of boarding, light housekeeping, furnished rooms, flats, and all other imaginable modes of existence in other people's houses." One day when she suffered an unusually acute attack of boarding-

house nausca, she suddenly exclaimed: "I will build a house, if it isn't any bigger than a packing-box. I will have a garden, too. I want ground to dig in, I want closets to rummage, I

want to count my tea-spoons." All this is deliciously feminine. That is the pleasing note of the whole

ADELAIDE L. MOUSE

book : a thoroughly seasoned femininity. Through the gift of a building-lot from an opulent patent-medicine uncle, Miss Sharpe's roof-tree is located in New Jersey, back of the Palisades. She plans it, builds it, and is so successful-mirabile dictu !- that she exclaims : "My

house suits me as a shell does its snail." She is a newspaper woman, then a literary worker. Everything nice eventually incorporates itself into her small castle. A charming bachelor, two years older than herself, lives on an adjoining lot, and she and "Cincinnatus" become as chummy as possible. The atmosphere and the style of the book are those of Cranford. But au up-todate Cranford

The author's humor is of the Stockton brand. Her very phrasing of a thing is aromatic with humor. As the briskly gentle tale purls along, it takes on with artistic harmony a more important trend, and a cheering love interest invests the level-headed Honor with a new charm. Twenty years before she had loved a young man named Paul. Her officious aunt acquaints her with the fact that his maternal forebears have developed insanity, and the lovers part. It is the romance of her life. Then Paul comes back from Russia. They both find out that, in love at twenty, they are decidedly out of it at forty, and Paul with bungling diffidence enables her to tell him this fact.

Then you know it is "up to" Cincinnatus, and you are very glad of it. He is literary, too, and soon after this presents his latest book to Honor with two lines written on a sheet of note-paper in it;

"Take them, love, the book and me together; Where the heart lies, let the brain lie also."

Cincinnatus used to rail against Browning, whom Honor admired extremely, so it was a delicate compliment to propose to her in Browningese. "Who was I to have the writer send me these two lines from the most perfect love-poem ever written by a man?" Read "Under My Own Roof" and you will see what answer the lady gives.

# THE LIFE OF AN EMPIRE-BUILDER.

CECH, RHODES. A Study of a Career. By Howard Hensman. Leather, 3% x 8% inches, 382 pp. Price, \$5.00. Harper & Bros., New York. "HIS book might better have been called "Cecil Rhodes: a Vindi-

cation," since it is the work of a professed admirer who writes with a purpose. Mr. Hensman is an Englishman, and is known as the author of a "History of Rhodesia." It is too early now for an adequate biography of Cecil Rhodes to be written. An author is necessarily led to assume a different tone in writing of a man who is still living, and one feels this in the present volume. This does not detract from its interest, however; the author is solicitous to tell the truth. and to deal fairly with the other side. As a general thing, he writes acceptably also, barring an occasional journalistic touch and a few

na:vely matter-of-fact comments upon the incidents of his story. The book is a noteworthy one, and on the whole exceedingly readable.

It is, of course, a very timely volume at the present moment. It can be recommended to any one who cares to see the whole situation that ied up to the present Boer war. Cecil Rhodes has been, for better or for worse, the force that brought that war about, and the history of his life is that of its preparation. Whatever one may think of him, he will surely be known as one of the world's great forces. He is the personification of the colonizing genius of the English people, and he is just as certainly one of the builders of the British empire as Clive. The work that such men have to do is the rough work of nature, of the struggle of the races for existence, and it is work that can not be relished in a sensitive age. That is, no doubt, the reason why Cecil Rhodes is a man disliked by many of the best people; for he is far less unscrupulous and more merciful than the average of the empire-building, savage-conquering type.

It is a dramatic story which Mr. Hensman tells, especially in its earlier stages, when we see a young man, unknown, poor, and weak in health, cherishing in his secret heart a dream of his country's growth and of the African empire that he is to found. We see him step by step forcing his way to power, making himself the leader of the colony and making his ambition theirs. We see him conquering savages, and governing them, founding colonies, building railroads, operating minesand all the time, with every move, fighting Kruger. For these two men represent the two warring races, and the history of South Africa for two decades has been the history of their struggle.

Externally this book is a very beautiful one, and a joy to read; but it does not represent great research, and there is no reason why it should not be made accessible to the public in a less expensive edition.

### AN EXAMINATION OF THE FOUNDATION OF ETHICS

Philosophy of Coxider. A Treatise of the Facts, Principles, and Ideals of Ethics. By George Trumbull Ladd, Professor of Philosophy in Vale University. Cloth, 6 x 9 inches, 663 pp. Price, \$1.00. Charles Scitioner's Sons, New York

NE to some degree acquainted with the essays and assays in the field of ethics during the past decade would confidently believe that a constituency for this latest work exists, of many searchers after truth, who will say when they find this book, "It is for this we have been waiting." The advocates of the "cerebrai" psychology have had the field, and have exploited

GLORGE T. LARDS

it for some years. It was inevitable that the healthy realism of a sane metaphysics should furnish, sooner or later, the needed antidote. If we are not in error in our estimate, the antidote has been found. This is not to say that Professor Ladd has made a very distinctly controversial work. On the contrary, the critical element is surprisingly small, considering the number and dignity of the heads in sight to be hit, and the formidable shoulders that bear the chips of challenge. There is here, throughout, a conservative and tolerant recognition of the contribution made to our ethical material by the evolutionary and materialistic philosophers, and the

viewpoint is completely modern. Nevertheless, for the most part, the naturalistic determinism of the recent school of moralists is rejected. This work is a reassertion, in the light of all the modern research, and over against many of the modern theories, of the regnancy of the free Self, and of man's final reference of his freedom to the freedom of the Personal God.

No review within our limits could suffice to excuse any one from a careful reading of this book, nor scarcely become an adequate ineitement to such a task. But if the reader will plunge into it with the chapter on " Moral Freedom" the entire clue to the method and attitude of the author will be in his hands. He will presently be challenged to take his position on the one crucial question of human freedom, by such a sentence as this: "There is absolutely nothing in the most recent discoveries, either of psychological or of physical science, which compels one to regard the deterministic solution [of the free-will problem) as the only valid and scientific answer to the problem."

his special treatment of the old problem of freedom is greatly illuminated in some of the later chapters of the book, especially in the author's philosophy of Personality and of Causation. He lifts us out of the region of uniliuminated abstractions entirely, and points out how absolutely ethics must rest in a consideration of personal life. There is a thorough sifting of the assumption that "the law of Causation for bids" the conception of an actual freedom of the human Self, and that human self-determination would destroy the integrity of the physical universe." As a finality, the author locates the ethical sense, the consciousness of freedom, the sense of moral obligation, in two facts, both of which are insoluble mysteries from some points of view. The first fact is an original, unique, and individual nature in man himself : and the second is the clearly apprehended, but largely uncomprehended personality and purpose of God.

Perhaps a more concise reference to this book should point out that it is built in three parts, that discuss in turn (1) The Nature of the Moral Self, with an analysis of the ethical consciousness; (2) The Virtuous Life and the characteristics of the Good Man, and (3) The Nature of Right, with a metaphysical theory in explanation of ethical

# A NEW BOOK BY BENJAMIN KIDD.

PRINCIPLES OF WESTERN CIVILIZATION. Being the First Volume of a Evolutionary Philosophy, By Benjamin Kidd. Cloth, With Appendix, Price, \$2.00, The Macmillan Company, System of Evolutionary Philosophy. 12mo, 538 pp. New York and London

"HIS new work, the first of a projected series, by the author of "Social Evolution," is in some sense supplementary to and reinforces the philosophy of his earlier work, and is marked by the same characteristics that gave his

comprehensive grasp of general principles, here and there a searchlight quality of insight, and, for the most part, clear and vigorous English. natural selection where Darwin left it, giving it an enlarged significance

BENIAMIN KIND

of " Projected Efficiency "-that these social forms transcend the limits of political consciousiess, the class interests of the time, and even the sense of moral responsibility. The end served by this process is immeasurably remote in the future. The evolutionary process, instead of being subordinated to the present, is working to some definite end throughout vast periods of time. Mr. Kidd insists that even to Darwin the meaning of progress and development had reference solely to the interests of the individuals who are engaged in maintaining a place in the rivalry of the present. In Mr. Spencer's philosophy this conflict is between the past and the present; in that of Mr. Kidd it is between the present and the future, the past epoch of social evolution having passed away with ail that distinguished it. We have here a view of human progress that is inspiring and full of valuable concepts. It is an immense gain over that idea of finality with which the self-satisfied observer is accustomed to regard the social and industrial institutions of his time.

There was much in Mr. Kidd's former work acceptable to the socialist propagandists. The same predilection is exhibited in the present work in passages uphoiding the idea of the subordination of the individual to society, and in the statement that the winning types of society are those in which the subordination of the individual to the social system is most complete.

Many readers will find it difficult to accept the author's conclusion that there is scarcely anything in the English character in sympathy with the spirit of modern liberaiism, and that the widespread transforming spirit of this liberalism among people of English speech transcends the limit of political consciousness. But, even if we accept the significant principle which it has been the author's purpose to enforce, we need not ignore the intellectual assent which the Englishspeaking races have given to the principles of modern liberalism, and the failure of such principles to find the same hospitable reception among the institutions of other branches of the human family. book itself, Mr. Kidd traces, with much lucidity, the origin of Western Liberalism, not from the France of the eighteenth century, but from the England of the seventeenth. In chapter x, the author seems unconsciously to expand his view of modern liberalism, and for the first time to appraise it at something near its true value.

Whether or not we accept Mr. Kidd's conclusions, and however we may differ as to the value of his main thesis, it is beyond dispute that he has given us a singularly suggestive book. It will not be as popular he has given us a singuinty suggestive bode. It will not be as popular as his "Social Evolution," practice because it deals with deeper phenomena, and because mit every reader will be able to follow the speculations of the author in his present volume. Vet it is a work which is destined, tho securing a much smaller cited of readers, to exert in the end a profounder influence upon a far greater number of persons.

# The Voice of the Living Teacher Always at Your Instant Command

A MARVELOUS SCIENTIFIC INVENTION THAT WILL TEACH YOU OR YOUR ENTIRE FAMILY, FRENCH. SPANISH OR GERMAN. GIVING YOU IO MINUTES OR IO HOURS WHENEVER AND WHEREVER CONVENIENT!

HIS is the advent of a new era in language study. Previous systems for learning French, Spanish, German have been revolutionized. The new method is a marvel of the 20th century. Fifty years ago men would have pronounced it nothing short of miraculous, a hundred years ago is inventors would have been hung for witchcraft. Today the world welcomes it as one of the greatest blessings made possible by human intelligence and scientific perfection.

Dr. Richard Rosenthal, the foremost linguist of the age, after years of experimenting has perfected a mechanical system in which the living voice of this celebrated instructor can be brought to you without loss or defect.

Repeats Lessons Once or a Hundred Times at Your Will

It Speaks Slowly or Rapidly Just as You Desire

You Have All to Yourself at any time a Masterly Teacher

# CURRENT POETRY.

# The Eldest-Born.

By FLORENCE WILKINSON.

I was a little baby, dead That earthly morn:

They gave me a white rose to keep; They sang, "It is not death, but sleep." She cried, "My eldest-born!"

I was a little spirit then, Reaching to God :

An eager, ignorant, upward flame, Cleaving the darkness whence I came, Tintos above the clod.

She cried, "The feet that I have kissed, Cold in the grave:

The shut month, and the cyclids dim— O God, the marble look of him!" L at heaven's architrave.

Trembled, but shrifted aloud, "I come, O Christ, my brother,"

The Beantiful leaned down and smiled:
"Go back to earth, thins little child,
And confort thy said mother,

"For when in dreams thou hoverest near, Gladdening her eyes, A glimpse of heaven she shall obtain, And, drinking of her cup of pain. Thyself shalt be made wise."

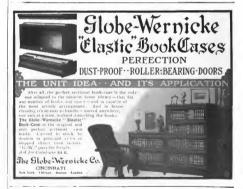

Time washes up along our shore,
A vast calm sea;
And I have learned the weight of teats.
Sin's color and the length of years.
The stir of things to be.

My brothers win the eartify goal With toil and stress; Gone is their infancy divine, And on their brows is writ the sign Of earth's forgetfulness.

service of that state. The Times recalls the rest of his story as fullows:

"During the eleven years he served Bayaria a-Minister of War, Minister of Police, and triand Chamberlain his work was probably the most remarkable ever accomplished by any state-man in his "class" of whom history makes mention. He found a petty principality, with scanty and overtaxed resources, Iving between stronger Powers which coveted her territory and only waited a pretext to absorb it; a people so pool and lacking in self-respect that mendicancy was the principal occupation of all classes; a bardensome army which impoverished the state for its maintenance; a weak but well-menning sovereign who was practically helpless in the hands of the nobility and clergy; and with difficulties and discouragements so great that almost any one else would have declined with thanks the offer of official employment and pursued his journey in quest of a more congenial military command."

He reorganized the arms, suppressed mendicance, made the poor confortable, and enabled them to provide for themselves in profitable occupations without expense to the state.

"The love with which he was regarded by the poor of Munich was so great that when he fell sick from overwork and worry they organized a monster procession to march to the cathedral and offer public prayers for his recovery-a tribute pever efore or since paid to an outlander and a heretic by the peasantry of a Catholic country. He drained the marshes which menaced the public health, stimulated and diversified the agriculture of the country, taught the people how to live economically when their resources were scanty, made the soldiers farmers and mechanics, and made the people of Bavaria the happiest and most constortable in Europe. Incidentally, be induced the nobility to surrender voluntarily many of their ancient and oppressive privileges, and discreetly extinguished the rights claimed by the Church through its many orders of mendicant friars and nuns, which were suppressed without opposition from the prelates.

Thompson resigned his offices in Baratia in 1794 and west to England to pursue scentific researches, from which he was recalled by urgent needs of Baratia during the Freech and Austrian war, when Munich was threatened be both armies. The Elector had field, leaving Taompson, then Connt Kumferd, with a general power to govern the state:

"He managed its affairs so wisely and discreetly that, while both the boatile armies wanted Munich, neither dared take it, and the tide of was swept around it, leaving it intact and coimpoverished

"Wearied and Imparted in health by ardains and fruitful labors of greater immediate and permanent value to Germany than had been reodered since Clovis at Solssons made an end of Roman rule in Gaul and brought the beginnings of order out of the tribal chaos of the premedieval period, gave this remainder of this life twistentic in-

vestigation."

A Case of Propunciation An impudent fellow named Hawarden Inquired, without asking his pawarden,

the learned Colquboun if the man in the mqnhoun Always lodged in some nobleman's gawarden

Whereupon the fite-enting Lord Cholmoodeley, Overhearing the words, remarked glolmondelev, To an awe-stricken neighbor, oosheathing his seighbor

That the question was very uncolmondeley.

One on Rohson,-The Chicago Journal tells this story: "Robson, do you know why you are iike a donkey?" "Like a donkey?" echoed Rob-son, opening his eves wide. "I don't." "Because your better half is stubbornness itself." The jest pleased Robson funnensely, for he at once saw the opportunity of a glorious dig at his wife. So when he got home he said : "Mrs. Robson, do you know why I am like a donkey?" He waited a moment expecting his wife to give it up. But she didn't. She looked at him somewhat pitriogly, as she answered, "I soppose it's because you were born so." - New Orleans Times-Democrat.

Washington and Roosevelt, - Ex-Congressman John S. Wise of Virginia, oow of this city, is a warm personal friend of President Roosevelt. Being in Washington a few days ago he visited the White House, and was promptly accorded an interview. In the course of the conversation the President is said to have suddenly remarked : "Now, John, you are a very observing man, and

know pretty near what is going on. Tell me what the people seem to think of my Administration?" "Oh, Mr. President," Mr. Wise replied, "the opinion seems to be that you will go down to posterity with Washington."

"I am delighted to hear that," the President is said to have answered interruptingly as he grasped Mr. Wise's hand and shook it heartily. But as he released his hold Mr. Wise continued : "Bot whether it will be with George or Booker T., I am not prepared to say,"-New York Times.

### The New Remedy for Catarrh is Very Valuable.

A Grand Rapids gentleman who represents a prominent manufacturing concern and travels through central and southern Michigan, relates the following regarding the new catarrh cure. He says: "After suffering from catarrh of the head, throat,

and stomach for several years, I heard of Stuart's Catarrh Tablets quite accidentally, and like everything else, I immediately bought a package and was decidedly surprised at the immediate relief it afforded me and still more to find a complete cure after several weeks' use.

"I have a little son who sings in a boys' choir in one of our prominent churches, and he is greatly tropbled with hoarseness and throat weakness, and on my return bome from a trip I gave him a few of the tablets one Sunday morning when he had complained of hoarseness. He was delighted with their effect, removing all husklness in a few minutes and making the voice clear and strong.

"As the tablets are very pleasant to the taste, I had no difficulty in persuading him to use them regularly.

"Our family physician told as they were an antisergic preparation of undoubted merit and that he binned had no heeltation in using not recommend."

Very many solvers failed to get 646 on account of the "try" Q-Kt, believing that Q-Kt 4 would mate. Kt x P stops this. It is necessary to place the Q on R 2, so that, after Kt x P, mate is given by Q-Q B.

In addition to those reported, Prof. A. M. H. gut 642; Dr. H. W. Fannin, Hackett, Ark., C. R. Schneider, Magley, Ind., and C. N. Festherstone, Rome, 6m, Dr. J. H. B., 643; W. W. K. 63; 64; 66; 645, and 645; the Misses S. H. S., and L. V. S., B. C., 644.

# The Monte Carlo Tourney.

MAROCZY WAYS PIRST PRIZE.

The Hungarian champion finished just ¼ point ahead of Pilisbury, and takes the first prize, 5,000 francs. The American Champion was 1/2 point better than Janowski and gets second prize, 3,000 francs. The Frenchman beat Teichmann 1/2 point, and wins third prise, 2,000 francs; while Teichman pockets 1,500 francs, the fourth prize. Fifth, sixth, and seventh prizes, worth 2,250 francs, are divided equally between Schlechter, Tarrasch, and Wolf. The non-prize winners get 3,000 francs. It is a great disappointment to American Chessplayers that our champion did not reach first place. While Maroczy is a great player, distinguished for exact, careful play, yet we believe that Pillsbury is a greater player, and that in a

# A Busy Worker

Coffee Touches up Different Spots

Frequently coffee sets up rheumatism when it is not busy with some other part of the body. A St. Joe, Mo., man, P. V. Wise, says: "About two years ago my knees began to stiffen and my feet and legs to swell, so that I was scarcely able to walk, and then only with the createst difficulty, for I was in constant pain.

"I consulted Dr. Barnes, one of the most prominent physicians here, and he diagnosed the case and inquired: 'Do you drink coffee?' 'Yes.' 'You must quit using it at once," he replied. I did so and commenced drinking Postum in its place.

"The swelling in my feet and ankles and the rheumatic pains subsided quickly, and during the past 18 months I have enjoyed most excellent health, and although I have passed the 68th mile post I have never enjoyed life better.

"Good health brings heaven to us here. I know of many cases where wonderful cures of atomach and heart trouble have been made by simply throwing away coffee and using Postum."

# The Wing Piano

Save from \$100 to \$200

We make the WING PIANO and sell it ourselves. It goes direct from our factory to your home. We do not employ any agents or salesmen. our factory to your home. We do not employ any agents or suresuled. When you buy the WING PIANO you pay the actual cost of construction and our small wholesale profit. This profit is small because we sell thousands of pianos yearly. Most retail stores sell no more than twelve to twenty pianos yearly, and must charge from \$100 to \$200 profit on each. They can't help it.

# SENT ON TRIAL WE PAY FREIGHT

We will send any WING PIANO to any part of the United States on trial. We pay freight in advance and do not ask for any advance payment or deposit. If the piano is not satisfactory after twenty days' trial in your home, we take it back entirely at our expense. You pay us nothing unless you keep the piano. There is absolutely no risk or expense to you.

# EASY MONTHLY PAYMENTS

The Instrumental Attachment is a special feature of the Wing Piano: it imitates wing Piano: it imitted for these perfectly the iones of the mandolin, guitar, harp, zither, and banjo. Music written for these instruments, with and without piano accompaniment, can be played just as perfectly by a single player on the piano as though rendered by an entire orchestra. The original instrumental attachment has been patented by us, and it cannot be bad in any other piano, although there are several imitations of it.

obtained in to minutes than by the are taught by an instructor who is thoroughly versed in physiology. Does not overtax the heart. The flow of blood is stimulated TOWARD the heart, thus relieving that organ, rather than giving it more work to do. Our pupils are of both sexes, and range in age from 12 to 85 years. The Stone Method embraces a thorough course in deep breathing, as well as physical training without extra expense.

Conscientiously and systematically follow our instructions and we can promise you a fine, strong, well developed physique, which bears every evidence of perfect manhood or womanhood; a clear brain; a light step; a splendid circulation that will make itself known in a ruddy complexion; bright eyes; sound, easy working lungs, with plenty of room in which to expand; an increased appetite; restful sleep; a cheerful disposition; an erect carriage. If you are too fat we can reduce your weight to normal, and if you are thin we can increase your weight to what it should be. In a word, we give

FREDERICK W. STONE,

Athletic Instructor of the Stone School of Scientific Physical Culture was formerly Director of Athletics of Columbia College and the Knickergood digestion; an active liver, sound, bocker Athetic Association, New York, and is at present director of Athletics in the Chicago Athletic Assoeistion, where he has classes daily from 12 to 1 and 4 to At the age of 42 years, he is still a physically perfect man. He established the world e record for 100 varde enrint o as second-1; he has been before the public 32 years as an athiete and instructor in physical culture, and it must be admitted is thorough'y qualifird to teach others the science of self-development.

### in actually add years to your life. What a vital meaning this has, when you come to think of it calmly and deliberately. By simply living correctly and building up and maintaining superior strength to be enabled to live longer! Such benefits are or inestimable value and can hardly be nteasured in dollars and cents

We are successfully teaching The Stone Method of Scientific Physical Culture to men and women in every part of the world. It requires only 10 minutes time each day, in your own room, just before rettring, or upon arising. No apparatus whatever is required, and you will be put to no expense aside from our modest fee. There is no guesswork about it, for individual Instruction is given in every case.

The Stone Method is a system of concentrated exertion, by which more exercise is actually

It is a personre to settly to the morits and the benefits to be derived from pool system to see that age. I was very in a pitter point in the form of the pool of Labrades, Onto, Dec. 7, 1901.

# TOPICS OF THE DAY.

### ENGLAND'S ATTITUDE IN 1861-65.

T has been quite the fashion with those American newspapers that enjoy the exhilarating exercise known as "twisting the British lion's tail " to make frequent reference, during the recent controversy over Europe's attitude toward us in 1898, to Russia's alleged friendship and Eugland's coldness during our Civil War, The Pittsburg Disputch, for instance, remarked when the controversy was at its height: "Even if England has done what she claims, and which is very much to be doubted, in view of all the statements, Americans have surely been told of it often enough; Russia has not continually east up to us what she did for the Union during the war of the Rebellion, when England was so ready to assist in the destruction of the republic."

One of the few men in England to champion the cause of the North in those stormy days was Goldwin Smith, then professor of modern history in Oxford University. "Leaders of English literature having mostly gone with their class to the side of the South," he says, "my pen was in requisition on the other side." Having thus earned his right to a hearing nearly forty years ago, he now tells the American people, through The Atlantic Monthly, some of the reasons that would have made it natural for the British to favor the South. That the nation as a whole did favor the South, he denies, "There can be no doubt," he declares, that "the mass of the English people did recognize the good cause, and was on the side of the North." The aristocrat and the Tory, however, could hardly be expected "to love the great incarnation of democracy by which it was constantly hinted to him that he and his cause would some day be deyoured." The American attitude toward England, too, "had not been invariably meek or polite," and American diplomacy had been characterized by an overbearing spirit. Almost simultaneously with the first crash of war, also, Mr. Spence "came out with a very clever book, representing the issue as being, not between slavery and free labor, but between free trade and protection." This took The Times and its vast power over to the side of the South, where it remained to the end of the war.

Anti-slavery considerations were the strongest inducements to sympathy with the North, but sympathy of that sort met a rather chilling reception at Washington; while the grounds on which sympathy was asked were not considered in England to be tenable. Professor Smith says on these points:

"The sympathy of the people in general could be challenged by the North only on the moral ground that the North was fighting against slavery. But when we, friends of the North, urged this plea, we had the misfortune to be met by a direct disclaimer of our advocacy on the part of our chents. President Lincoln repudiated the intention of attacking slavery. Seward repudiated it in still more emphatic terms. Congress had tried to bring back the slave States to the fold by promises of increased securities for slav-

ery, including a sharpening of the Fugitive Slave Law. What had we to say? Was it not wonderful. and greatly to the credit of the English people, that through this thick veil of politic disclaimer the mass of them should have recognized the good cause? The merit of their loyalty to humanity was the greater since hundreds of thousands of them were for the time deprived of their means of subsistence by the cutting off of the sup-

PROF GOLDWIN SMITH

ply of cotton. The South, at all events, did them justice; for it had fully reckoned on the need of cotton as a force that would overbear all moral considerations and compel the English people to take its

"Had the issue been, as Lincoln, Seward, and Congress represented it as being, merely political and territorial, we might have had to decide against the North. Few who have looked into the history can doubt that the Union originally was, and was generally taken by the parties to it to be, a compact, dissoluble, perhaps most of them would have said, at pleasure, dissoluble certainly on breach of the articles of Union. Among these articles, unquestionably, were the recognition and protection of slavery, which the Constitution guaranteed by means of a fugitive slave law. It was not less certain that the existence of slavery was threatened by the abolition movement at the North, and practically attacked by the election of Lincoln, who had declared that the continent must be all slave or all free; meaning, of course, that it must be all free,

The fact was, declares Professor Smith, that the people of the North had always been in sympathy with just such revolutionary uprisings as the South was engaged in. He writes further:

"Apart, however, from the question of legal secession, revelutionary secession might have been said to have been very much in accordance with American ideas. Lincoln is quoted by Mr. Morse as saying in Congress, 'Any people anywhere, being inclined and having the power, have the right to rise up and shake off the existing government, and form a new one that suits them better. This is a most valuable, a most sacred right,-a right which, we hope and believe, is to liberate the world. Nor is this right confined to cases in which the whole people of an existing government may choose to exercise it. Any portion of such people that can, may revolutionize, and make their own of so much of the territory as they inhabit."

"A stronger ground for separation there could not possibly be than the radical antagonism between the social organizations of the two groups of States, which made it impossible that they should live in harmony under the same political roof, and had rendered their enforced union a source of ever-increasing bitterness and strife.

"I do not pretend, as an excuse for the attitude of the English people, that all this was distinctly before their minds. What was distinctly before their minds was that American sympathy had generally been on the side of revolution and rebellion .-Spanish-American, Polish, Hungarian, or Irish, American sympathy with Irish rebellion would of course make a particular impression on the people of the country whose unity was threatened not less than was the unity of the United States by the secession of the South.

"The division of parties in England was perfectly natural: aristocratic society could not help sympathizing with the planter oligarchy. If England was divided in opinion, so was the North itself. There was all the time in the North a strong Democratic party opposed to the war. The autumu elections of 1862 went greatly against the Government. It was in expectation of calling forth Northern support that Lee invaded Pennsylvania, and had he conquered at Gettysburg his expectation would probably have been fulfilled. It actually was fulfilled, after a fashion, by the draft riots in New York."

Even in the Alabama affair Professor Smith is far from thinking Great Britain in the wrong. He says of it:

"During the four years of the war Southern attempts to abuse British ports and shipyards for war purposes were a constant source of trouble to the British Government. Similar attempts by the Cuban insurgents to abuse the ports and shippards of the United States were a cause of the same trouble to the American Government, which deemed the annovance a sufficient justification for hostile action against Spanish dominion as the exciting cause. Did not the British Government do its duty as a neutral toward the North as well as did the American Government toward Spain? We need not go back to the time of Genêt and his privateers. When people quarrel, go to war, and cause trouble, disturbance, and loss to the neighborhood, they must be content if the neighborhood performs the duties of neutrality in good faith and reasonably well. This the British Government apparently did, tho in its case the trouble and annoyance were extreme, extending to the cutting off of the supply of raw material from a vast manufacturing population. The case of the Atabama, which was the worst, was a slip caused by the sudden illness of a law officer before whom the papers lay, the the Foreign Office ought, no doubt, to have looked him up. The vessel sailed without a clearance, and took on board her armament at the Azores. American pursuit, moreover, was slack. That the government or the nation at large had anything to do, actively or constructively, with the fitting out of the vessel was a preposterous fiction, whatever might be the feelings and conduct of violent sympathizers with the South on this or other occasions, I was glad that the indemnity was paid, because it closed a dangerous dispute; but, looking back, I can hardly think that it was due '

Russia's friendship for us at that time is dismissed with the following paragraph:

"If Russia seemed to play a more friendly part than England. she did it without any of the risk which England would have incurred. It can scarcely be imagined that one of the Powers of the Holy Alliance was actuated by a sincere love of the American republic, or that the dark conclave which rules her was doing anything but playing its diplomatic game."

### OUTLOOK FOR THE SUBSIDY BILL.

"HERE is rather poor prospect, according to most of the Washington correspondents, that the Shipping Subsidy bill will pass the House at this session. There is said to be strong feeling against it west of the Alleghanies, and the western Representatives, it is reported, prefer to wait till after the fall elections before voting for it. The six Republican Senators from Wisconsin, Iowa, and Vermont voted against it when it passed the Senate, and the Western Representatives are said to claim that this break in the party ranks kills the claim that it is

-The St. Paul Pioneer Press.

a party measure, and leaves them free to oppose it also if they want to. If the Representatives from these three States vote with the Democrats against the bill, it can not pass.

"There is a widespread impression among the Republican members of the House," reports the Washington correspondent of the New York Sun, which favors the measure, "that no serious attempt will be made to pes the bill at this session," and the correspondent of The Times (New York) regards it as "evident that it will have a rocky road to travel," and confirms the view expressed by The Sun's representative. In fact, says the correspondent of the Philadelphia North American, "the disposition to postpone action until next session is general," and so say the Congressional reporters of the Washington Post, the Chicago Chronicle and Tribune, and many other papers. Says the correspondent of the New York Journal of Commerce:

"It is certain that the antagonism to the measure is growing stronger in the House and opponents claim that it is already as good as dead. A Senator who has made a very careful canvass of the prospects of the bill stated to-day that at least forty Republican votes could safely be counted against the ship subsidy. lows and Wisconsin, he said, would be nearly solid against it. and there would be a number of Illinois and Minnesota votes that could be counted on by the opposition. Senator Hanna himself is very far from being pleased with his favorite measure in its present form. The amendment which limited the subsidy to American-built ships thoroughly disgusted him, and he now concedes that the prospects of the bill are far from bright

"Should it contrive to get through the House it will be only in a seriously amended form and will not be likely to gain the assent of the Senate under those circumstances. Should it go over to the short session it will be easy to kill it by debate, and several Senators have already hinted a determination to adopt this course with it if the bill goes far enough to make such action necessary,"

The correspondent of the St. Louis Globe-Democrat, a paper

ADVANIAGE OF RAVING a KING. King Edward has set the custom of snuff-taking, which, as a result, promises to be generally revived. Mariborough House dinners a Georgian silver snuff-box, once used by the Mariborough House dinners a Georgian silver shull-look, once used by the Prince Regent, is handed to his Majesty at the Weginning of dessert, while the ladies are still at the table. The King helps himself liberally, sharing his pinches with favored guests .- Press despatch from London.

that favors the bill, thinks its prospects are far from rosy. He says:

"The bill will go to the House committee on merchant marine and fisheries. There are four Republican members of this committee who have already gone on record in opposition to a ship subsidy measure. They are Minor of Wicconsia, Stevend Minuseota, Jones of Washington, and Fordney of Michigan. These members opposed ship-subsidy legislation in the last Congress and amended the Frye bill out of all semblance to its original form. They are still far from being ready to support any measure of the kind, and decline to commit themselves in support of the measure which has just passed the Senate.

"The committee on merchant marine and fisheries is composed of eleven Republicans and six Democrats. The defection of four Republicans will prevent a favorable report upon the measure."

On the other hand, the Washington correspondent of the Philadelphia Press says:

"General Grosvenor, the chairman of the House committee on the merchant marine, said to The Press correspondent before he left the city for his home in Ohio, that his committee would take up the bill at an early date for consideration, and that he sepected to see it passed at this session of Congress. He declared that all talk about any agreement or understanding that this bill was to go over in the House until the next session is without any foundation whatever, and is simply the usual kind of 'argment' brought against the measure. Moreover, General Grosvenor, who is throughly conversant with the prevailing opinion in the House in regard to this measure, said that there was no doubt in his mind of its passage by a good majority."

# A TWENTY-PER-CENT. CONCESSION TO CUBA.

A FIRE of criticism from both the friends and foes of Cuban reciprocity greets the attempt to placate both with a so-per-cent, concession. General Wood declares that a reduction so small will "do no good to Cuba," and President-cleet Palma says it will be "very disappointing to the Cuban people." The New York Herald calls it "a miserable compromise," and the New York Tribune thinks the caucus "might have done better." The New York Journal of Commerce calls the concession "small," "gridging," and "very inadequate," and the New York Eventing Post says that "it is a pittiful affair, more like giving Cuba a stone than the bread which she asks," Says the New York Herald.

"At present a sack of sugar weighing 300 pounds costs the Cuban planter \$6 to produce. He sells it in Havana for \$4.50 and tims loses \$1.20 on every sack of sigar he sells. These are the figures given by Governor-tieueral Wood, than whom there can be no better authority.

"The reduction of 20 per cent, in the duty, agreed to by the Republican majority in the House, will amount to \$1 and a fraction of a cent over on every sack of 200 pounds. If that entire reduction reaches the pocket of the planter he will then get \$6. for his sack of sugar—20 cents less than it costs him to produce it.

"Governor-General Wood says a 33 per cent, reduction of duty would only leave the planter a profit of 35 cents per sact if the whole reduction went to him, President Palma has declared that a less than 50-per-cent, cut in the duty will not give the Cuban sugar-growers "a living chance." And Oxnard, the bestsugar-champion, declared in 1859 that if the world's sugarent in duty free American beet-sugar growers could successfully compete with 50.

"The 20-per-cent reduction is equivalent to none at all. The Cuban planters may well say to Congress: 'We asked for bread and you have given us a stone.'

"But when the measure reaches the Senate," says the Chicago Evening Post, "amendments will be in order," and many other papers express the opinion that when the bill finally becomes law, it will carry 33/f per cent or more of relief for the Cuban planter. The New York Commercial Adventiser says:

"The Senate will change it radically if the Republican leaders

are true to their published statements as to the vital importance of the situation. An increase from 20 to 25 or 30 per cent, and very draxite treatment of the Sibbey compromise feature may be depended upon if certain impressive declarations were made in good faith. The Senate Republicans have a clean slate and are test on supplement the defective remedy of the Ilonus. Some of them have, if report is true, held in reserve a far broader and more generous plan for Cuba than could have been mentioned in the Ilonus. They are better able to estimate the value of party harmony than those who have been susceptible to the pseculiar influence of the Oxnard contingent, and who were looking to meeting their constituents before next election. The Senate may be depended upon to improve the House measure into the right shape."

Just as much dissatisfaction is expressed by the other side. The New York Press, for example, declares:

"The flat truth about the reduction proposition of the Administration and its impressed supporters in Congress is that it is not a Republican measure. It is a free-trade Democratic measure, and tagging the name of the President or of anybody else to it can not make it anything but a free-trade measure, . . The place for the projection Republicans of Congress to stand, if they wish to hold with their party now and in the future, is where the opposition to the Administration tariff reduction mensure stands. That is protection and Republicanism. The other is Democratic free trade. So the people of the United States will affirm at the polls, And their affirmation and their reudering of accounts will not be against the Republicans who have stood by their party. They will be against those who have adopted the unprecedented public policy-in Republican annalsof national legislation against the national party's principles and pledges. What a policy it is! What a score to be settled!

Says the Jacksonville Times-Union;

"We would rejoice in Cuba's gain if it were not at the expense of the people of the United States. The dollars that go to increase the prosperity of Cuba must come from some source, that source is the United States Treasury. They go into the Treastury from the pockets of the people of the United States. If they

are paid out other dollars must come from the pockets of the people to replace them. Our people are to be taxed to enrich foreigners. . . . It is a strange statesmanship, a peculiar idea of justice, that would give money out of the Treasury to a foreign people while the just debts of the United States to its own people remain unpaid and while payment is refused on the score of economy. Little more than ten per cent, of the amount that the Republicans propose to give Cuba for nothing would pay

UNCLE SAM: "I'll give you one teaspoonful, Cuby. More of it might make you sick," -The Columbus Dispatch.

to Florida a debt which the uation has been owing nearly half a century."

The New Orleans Picarune says:

"The sugar people have no reason to be discouraged, as, even should they fail to kill the bill in the House, they can still hope to shelve it in the Senate, or, failing in that, talk it to death. Moreover, there will be an excellent chance of combining with the Democrats in the upper House, and as the rules of the Senate are more favorable to fillbastering tactics and obstruction, at determined minority could casily make it impossible for the Senate to act at the present session.

"The administration Republicans placed themselves on record as favoring the sugar trust by refusing to place refined sugar on the same footing with raw. As a matter of fact, everybody knows that it is not Cuba, but the trust, that is to be the beneficiary of the proposed legislation."

### GERMANY AND AMERICAN MEATS.

SOME satirical remarks have been called out by the news that three days after Prince Henry sailed for the United States. Emperor William signed a decree providing for the enforcement of a prohibitory measure against American canned beef, bacon, hams, and nork. In 1001 our exports of these products to Germany amounted to \$6,000,000. "It is a very interesting illustration of the light weight that is to be attached to international courtesies," observes the Brooklyn Times. Other European countries are also taking measures against the "American invasion," and it would not surprise the Philadelphia Ledger if "the whole of Europe, not excepting Great Britain, in time will so frame the tariff laws as to make it more difficult for the United States to market its surplus abroad." Russia's tariff on American machinery is still fresh in mind. Switzerland is considering a tariff bill that doubles the duties on some articles we send thither, and Hungary has just prohibited the importation of American plants and fresh fruit,

Germany does not bar out American meats in so many words, but bars out all meats kept by certain prescrutives, among which are borax and boric acid. American meats are preserved by borax and boric acid, and hence are shut out. A number of papers re-

call that German and British official experts have declared these preservatives harmless, and infer that it is a purely political move, made for the benefit of the German agrarians. The Baltimore Sun. however. sees reasonableness in the German measure and does not think that it is "the duty of the Germans to take boric acid on meat as an evidence of their appreciation of the hospitality which Uncle Sam lay ished upon Prince Henry."

BROTHER WILL: "Ach, du liebe zeit!
Ist das mein bruder Henrich?"

Fie Columbut Dishafeh.

est trade move Germany has ever made. It will destroy practically the American meat trade with Germany and place it in the hands of the agrarians. In a word, it says to the German people, 'Buy your meats of the agrarians or starve.'

"Germany has reason to discriminate in the matter of preservatives because many of the chemicals used for the purpose are harmful; but to decree that borax or boracic acid should not be used is-imply evidence of the insincenty of Germany's move, as her own commission and her own scientists have asceratined the harmlessness of borax. The only American meat which is not thus shut out is the thoroughly cured salt hum. It operates against pork, mild-cured ham, baceo, pickled pork, barreled beef, and sansage. In the matter of sunsage exports alone from 20, 200,200 to 20,200,000 pointed similarly are affected. "The amount of borack acid in the solution used on meats is hardly more than one-fourth of one per cent. and may be blown off and washed off before the meat is offered for sale. American exports of fresh beef to Germany have been cut off already by reason of the stipulation that the organs of the animals be exposed. When frozen beef with the organs exposed is defrosted decommostition sets in and the meat is spoiled.

"Last year there were 19,000,000 pounds of bacon, 7,500,000 of salled, pickled, and other cured beef, and 3,500,000 pounds of salled and pickled pork shipped to Germany. When this decree goes into effect, on October 1 next, preventing the import of meats preserved with boracie acid, it will thus mean the lost of millions of dollars annually to the meat and live-stock interests of this country.

"There would be as much sincerity in saying that anybody might go to the north pole who wanted to, but that those who went must not wear clothing.

"The truth is that Germany is mortally afraid of America's position in the field of world trade, and that therein is the reason why restriction after restriction has been placed upon American products. The cumination is reached in this decree. That it is a subterfage to avoid a tariff war is apparent in that American means are not mentioned specifically and the terms of the decree theoretically apply to the import of all foreign means into Germany. As a matter of fact to only his this country."

## MINING FIGURES OF THE WORLD.

S TATISTICS recently compiled by Clement Le Neve Foster, of England, show that England leads the world in the production of coal and gold, while the United States has the undesirable distinction of a high death-rate among its miners. Dr. Foster's estimate of the quantity of minerals raised throughout the world in 1000 is as follows:

																				267,636,204 toms
fron				 			 ,	٠.	٠.			٠.						٠.		40:447:415 10ma
Petroleum																				
Salt					 				 									٠.		18.578,076 tons
Fine silver .																				
Lesd	 							٠,	 	٠.								٠.		, 757,841 tons
Copper	 			 					٠.			٠.						٠.		514-715 lons
Zinc			 ٠.															٠.		44%373 toms
Pine gold	 								 			٠.		٠.				٠.		. 303,106 kitos
Tin	 ٠.	٠.					 				٠.							٠.		. 80,643 10Bs

The British empire produced 218,000,000 tons of coal, while the United States mined some 243,000,000 tons. Altho the production of the United States was less than that of the entire British empire, it was more than the amount mined in the United Kingdom. Germany comes third with 150,000,000 tons, while Austria-Hungary, which ranks fourth, produced about 40,000,000. The output of gold for the entire British empire was the largest of any country, namely, 188,401 killos. Great Britain produced half as much tin as all the other nations combined, while the United States exceeded them all in the production of conner; iron, lead, and zinc.

According to Dr. Poster there were 4,475,000 persons employed in mines throughout the world in 1900. Of these, 1,500,000 belonged to the British empire, 733,000 to Germany, and about 500,000 to the United States, tho he points out that in this country machinery is used to a greater extent than in any other.

The Glasgow Herald, in commenting upon Dr. Poster's report, finds much satisfaction in the figures regarding the safety of coal-miners. The deaths from accidents lu coal-mines numbered 4.042. The death-rate per thousand for the world is given as 1.92, and 1.29 for the United Kingdom. Belgium shows the lowest rate of all, 1.05, while Bosnia and Herzegovina head the teath-rate list with 7.06. The death-rate of the United States is given as 3.20, and for Germany 2.19. The Boston Herald, commenting upon this, says:

"Altho the greater use of machinery in the American mines may make the work more bazardous, there would seem to be no good reason why our accident rate should be so much higher than that of Germany or Great Britain, particularly with

so many deep mines in the latter country. But when the enormous total of coal mined in 1900 is considered, the total number of deaths by accident is not large—in fact, rather surprisingly low."

# HARD TIMES FOR MILLIONAIRES AND

W HILE the country at large is rolling in prosperity, it appears that two classes, near each other in geographical location, are getting less of it than the rest of us. The rich man in the inside office and the weary eleck perched on the high stool

MR. HENRY CHAPMAN WATSON, Editor of Dan's Resume.

ontside are suffering from comparatively hard times. So we are told by Mr. Henry Chapman Watson, editor of Dun's Review, who writes an article in the Philadelphia Saturday Evening Post about it. He says:

"The wage-earner has been so well emhas been so well emhas been so well emhas swelled the deposits in savings-banks beyond all records, and is able to carry a larger life insurance, besides putting money in building and loan associations. These forms of investment

appeal to the man in moderate circumstances, and his success or failure is quickly reflected in the reports of these companies. On the other hand, the man of great wealth finds that properties on which he fortherly received from 7 to to per cent. interlest now yield only from 4 to 5 per cent. and that his bank stocks and government bonds return 2 per cent. or the stocks which articles of increased cost is lumber, which sells far above what was its price in earlier years when the aggregate cost of living was much higher than now. Yet the poor man does not feel this influence so much as does the wealthy landholder, who is compelled to rent his houses more cheaply altho he pays more for the materials used in their construction. It is a mistake to explain a way every record of expanding values by attributing the gain to the fortunate few."

These words may not deter people from trying to push into the ranks of the millionaires, but Mr. Watson's remarks on the conditiou of the office clerk as compared with his artisan father may have more effect;

"The artisans, skilled labor in every branch of manufacturing, and the agricultural communities have prospered remarkably in the past few years, the enhanced cost of living has been met with most difficulty by the office employees in the big cities. With them the supply is always greater than the demand, even when there is an urgent need for skilled labor in the trades. To some extent this is due to the national passion for excitement; the desire to be where there is the greatest activity and the most varied forms of amusement.

"But another and powerful influence is the ambition of parents to have their sons engaged in what they deem a 'gentleman's' occupation. The father is a skilled mechanic, earning \$4 or \$8 a day, and always able to find employment. The son has teadwantage of a good free-school editation, and when he graduates he is sent to the nearest city to work in an office. His partners want him to have social advantages which they fear can not be had if he follows his father's life of manual labor. The result is an army of clerks, who can never earn above \$15 or \$20 a week. and who are confined it more or less poorly ventilated offices.

instead of following the healthier and more productive lives led by their parents, whilel are descreted in the effort to gain social possibilities. It is no exaggeration to say that a capable carpenter, plumber, or skilled matchinis seldom seeks long for work, and earns \$24 a week readily, whereas office assistants are abundant at \$5.5. Industrial netrity stimulates the elemand for skilled labor and purts a premium on good mechanics, but a large merpense. Hence, the enhanced cost of living is felt by this one class more severely than by anyother because they seldom share proportionately in the benefits of greater general prosperity."

### A NEW REBELLION IN CHINA.

THE outbreak in the Southern provinces of China, which seems to be giving General Ma and the government forces all they can do, and perhaps more, is not regarded, thus far, as likely to call for outside interference. The newspaper comment is rather cautious on this point, however, for previous disturbances have shown that almost any kind of a ruction in that quarter of the globe may entail interesting possibilities. The Philadelphia Press gives its theory of the revol as follows:

"This Southern population is always turbulent. It has never fully accepted Manchin supremacy. Canton is never without its rioters. The interior of these provinces is perpetually breaking out in small village revolts. All three provinces have suffered. The tea trade has been ruined by Ceylon and Annam. The fall in copper has injured mines in Yunnan. The interior traffic down to Indo-China has been vexed by the French custom-houses in Tonking. The interruption of emigration to the Philippines by valve. The indemnity for foreign losses in North China has just added to imperial tuxation.

"These things working together are quite enough to account for the insurrection. With leaders equal to rule, it might begin the expulsion of the Manchu. But this will not come. Insteadthe revolt may smolder for months. Plundering bands will ravage the land. All manner of evil will be worked, and in the end the

imperial troops will force their way along, leaving death and desolated villages behind."

As to the military situation, the Buf-

falo Express says: "The report that General Ma has been defeated by the Kwang-Sirebels shows that the disturbance in Southern China is much more serious than was at first believed. The rebellion started in the province of Kwang-Si, but it is now spreading to Yunnan on the West and Kwangtung on the East, in which is located Canton, All are very populous provinces and contain thousands of people who would lend themselves willingly to the

schemes of the lead-

GENERAL MA-

ers. These provinces were kept quiet during the Boxer uprising. The statement that the imperial troops are flocking to the rebels may be believed, in view of the loot. General Ma has been driven out of Kwang-8i and is now at Kao-Chou in Kwangtung. Marshal Sn is also in the latter province, but is prevented by the rebels from joining General Ma.

"More troops will undoubtedly be sent to the relief of both officers, but this does not mean that the relealing will quiedly be put down. This is especially true if it is a revival of the Taping about the Taping and the Taping are the top to the the Taping the top the thing the those who were dispersed by Chinese Gordon, they can not easily be defeated."

# POSITION OF GENERAL MILES.

N OBODY seems to think much of General Miles's schemo for ending the Philippine war without more bloodshed, to judge from the aewspaper remarks about it; the incident has, in fact, attracted more attention to the hostility between the general and the Administra-

Copyright by B. F. Falk, N. Y.

GEN. NELSON A. MILES.

tilities beyond the sea. The expansionists object to the plan (which is outliaed at the end of this article), somo on the ground that the war is over already, others on the ground that only the most severe measures will bring the natives to terms. The "antis" smile at the general's idea that a delegation of Cubaas and Porto Ricans would persuade the Filipiaos to welcome ns. Says the Phila-

delphia Ledger, for

tion than to the hos-

example: "Well, no; it would hardly do to let Miles take a delegation from Cuba and Porto Rico at the present juncture to teach the Filipiaos the blessiags of American rule." Still further attention has been drawn to the strained relations between the War Department and the lientenant-general by his declaration before a Congressional committee, last week, that he will resign if Secretary Root's bill providing for a general staff is passed. His reason is that the creation of a general staff will divide among the officers composing it the responsibilities and duties which should properly rest upon the general in command,

The general feeling seems to be that Miles is a presson nongrate to the Administration, and that his best service to himself and to the army at this time would be to retire. The Providence fournat, for example, remarks "General Miles will not be allowed to go to the Philippines. General Miles is not allowed to do anything except wear his uniforms. It is a humiliating position for the ranking officer of the army, and a more sensitive man in his place would have asked for retirement long ago." The Philadelphia, Verth America mays similarly a

"The position occupied by General Miles as nominal commander of the army is made ridiculous and humiliating by studied slights put upon him by civilians exercising a little brief authority. He is not permitted to take active command of troops in the field, and every suggestion made by him is not only turned down, but treated with marked contempt and misrepresented by the anti-Miles hureau of publicity.

"It is a question whether the general's endurance of this treatment shows patient courage or lack of sensitiveness. That he is not wanted at the head of the army by the Secretary of War and the Corbin faction is obvious. They would be pleased if he should take advantage of his right to retain "General Miles may be disinclined to gratify his enemies, but if he chooses to remaia ia his present position be can expect further humiliations, nanoyances, and insults. The way of dignified retirement is open to him."

Says the New York Evening Post :

"The orderly conduct of military business and the discipliac of the service are suffering by the existing situation. The War Department could, of course, ead the trouble by forcibly resiring General Miles, as he is over sity-two years of age. It does not wish to do this, because it has no desire to seem to persecute him or to make a marry of him. Uader the circumstances, the worlder grows that the persistently smubbed and rebuked general does not have the good taste to rotice voluntarily, and leave the General Miles has attained the highest possible raak and the highest possible honors, and his voluntary retriement at this time would be a graceful act, which would win him back some of his lost popularity."

General Miles's plan is outlined as follows by the Washington correspondent of the Philadelphia Ledger:

"It is understood that the proposed plan was to take six leading, well-educated Cubans and six representative Porto Ricans and go with them to the districts in the Philippines where the natives are still under arms. The Cubans and Porto Ricans were to go about among the natives and associato with them freely, with the purpose of getting acquainted with them and gaining their confidence, after which they would explain to them the beachicent consequences of American interference and control in Cuba and Porto Rico. It was expected that this would convince the Filipiaos that a peaceful submission to American sovereignty would bring them many advantages, not the least of which would be a safe, stable government, commercial opportunities, better schools, and the protection of life and property. At the same time, it was intended to bring a considerable number of prominent Filipinos to the United States and give them opportunity to gain a knowledge of the power and size of this country, its institutions, people, laws, and history. General Miles argued that in this way the Filipinos could be nacified without further loss of life and with great saving of expenditure. Secretary Root, disapproving of the plan, conferred with Governor

A PEFF INTO THE FUTURE J. H.: "We've just captured the last Boer gun." U. S.: "Only a few Filipino guerillas left."

-The Detroit News.

Taft, who is in Washington, and with General Chaffee by cable and found them opposed to tho idea. The President, accepting their view of the matter, also refused to entertain the suggestion, and it was agreed to adhere to the present policy."

Cost of the American Navy.—The bureau of supplies and accounts of the may recently prepared a report covering the expenditures unde ou results of the navy since the completion of the "White Squadrou," The Seattle Post-Intelligencer thinks this report worthy of some note, because "for the first time it is possible to learn exactly what each vessel of the navy has cost the Government, in original construction as well as in

repairs, since her acceptance from the contractors." It appears that, excluding the "White Squadron," the navy has cost \$90,-00,005,008.30, and about \$9,500,000 for repairs. The cost of ships under construction amounts to \$150,000,000, out hirty per cent. more than the entire cost of construction of all the vessels in the present navy, with the exception of the four vessels of the "White Squadron," the Chicago, Atlanta, Boston, and Dol-Shin.

The Chicago has cost the most in repairs. It cost \$1.357,353 to practically rebuild her. The Cincinnati has cost upward of \$358,000, while her sister ship, the Raleigh, built at a private yard, in a year's less time, and for less money, has cost but \$177,000 in repairs, altho the Raleigh has been one year longer in the service than the Cincinnati. The battle-ship Oregon has cost a little less than \$68,000 spent for repairs, excluding the cost of the accident that befell her on Inne 29, 1900, in Asiatic waters. Every other battle-ship, it appears, except those launched since the war with Spain, has cost in repairs npward of \$150,000. The repairs on the Indiana, built at the same yard as the Oregon, have cost upward of \$283,000. The torpedo-boats have cost heavily for repairs. The repairs on the Porter, since she was launched, have cost about \$28,000, and over \$18,000 has been expended on the Rodgers. The repairs on the Rowan have cost \$12,000, the Rowan costing \$10,000 more to build than the Parter.

### A COMPLAINT FROM PORTO RICO.

THE Cubans accuse the Porto Rieans of rank ingratitude in opposing the tariff concessions to Cuban sugar. When Senor Degetau, a Porto Rican delegate, recently urged the ways and means committee in Washington not to grant the proposed alto Cuba. Señor Mendoza, the Cuban delegate, at once turned upon him and expressed surprise that a Porto Rican should take such an attitude, in view of the fact that Porto Rico owes her present condition to Cuba. Señor Degetau did not reply, but the Porto Rico theraid (San Juan) does. The Hirraid says that Porto Rico would have been better off in she had been left alone, and Cuba, too, would have been better off under the proffered Spanish autonomy then under "the unlucky reality of an independence with naval stations and yearly threats of a foreign intervention." It goes on:

N "We did not follow Coba in her efforts to expel Spain, because we foresaw another Power which would take the place of the Iberic one. And therefore it was not worth while to sacrifice two generations to banishment or the grave to obtain a mere change of masters. Between the two flags we preferred the one which waved over the cradle of our ancestors, and of the two races, the one which gave ns life and put its soul into ours. Slaves with Spain, and slaves with America, the ancient servitude was preferable, as it left us two alternatives: the one, that of protest in a language spoken and understood by us, and the other, that of arms to obtain a final and solemn sevaration."

The freedom offered by Spain is contrasted with Porto Rico's present condition as follows:

"By the autonomy granted in 1807 the personality of Cuba and Puerto Rico was recognized, and more amply than England had granted autonomy to Canada and Australia, as we continued to send senators and deputies to the congress at Madrid. With the autonomy of 1872 we were given legislative chambers and a representation in Puerto Rico more nominal than effective; the governor reigned without governing, as the sovereign in parliamentary monar-without governing, as the sovereign in parliamentary monar-

"What do the successors of that régime give us, or what can they give us—those who snatched us away by the force of their fleets and armies? They will never give us the position of a State; they will give us, after a thousand delays, the condition of a Territory. And in a Territory the federal Administration of Washington always dominates, as it appoints the governor, and at the same time empowers him to appoint all the public functionaries and to impose his veto on the laws of the legisla-

"That is to say, we have changed our flag, our nationality, our language, our race, and will lose the character and all that our Latin forefathers gave us; what had become for us our reality and constituted our pride and the inheritance of our children.

"And who was the cause of the cessation of our autonomy and of the Spanish colonies becoming American ones? Cuba; the patriots of Cuba, the liberators of Cuba, royally and nobly mis-taken; but nevertheless mistaken. For this reason Sehor Mendoza is right when he says the Pactro Rico owes her present condition to Cuba. She owes it to ber yes, and therefore she owes her an irremediable misfortune and a sadgess without end. She owes it not actual condition of a country raled by outsiders, who do not even listen to the because she speaks to the some of Shakespears in the ten along the packet of the some of the some of the condition of the control of the some of

The Oath of Office.—Even before Mr. Low took his oath to execute the laws as mayor of New York (City the newspapers discussed with great seriousness the policy and, indeed, the righteousness, of enforcing tie excise law. In the midst of all the debate, he took the eath in regular form, and entered upon the execution of the laws—but, according to the daily papers, has made no serious effort to enforce the Sunday-closing feature of the excise law. This leads a little monthly called The Whin, that is edited by Ernest Crosby and Benedite Prieth, and is published.

Nixon: "Do you see any place to land, Dave?"

HELP:

- The New York Herald.

lished in Newark, to rise up and protest, not against the law or its non-enforcement, but against the oath, which the great metropolition duties seem to have lost sight of entirely in the discussion. Says The Whim:

"The oath of office is a medieval institution which has somehow survived a great deal of similar nonsense. No bank president or railway director has to take an oath of office. Why should our political people have to do it? The oath has no effect on a bad man, and all it can do to a good man is to make him a nuisance to his friends and a curse to the cause he has at heart. The coronation of King Edward will give us an exhibition of a great many ridiculous ancient customs. The great judges and chancellors of England have been sitting for weeks in solemn conclave to determine who has the hereditary right to carry the king's salt-spoon and night-cap in procession. We have got rid of this comparatively harmless nonsense, but we have kept the most dangerous feature of the ceremony, the coronation oath-the oath of office-itself. It was the oath of George 111, which delayed for twenty years and more the obviously just measure of Catholic emancipation in England and threw ministry after ministry into disorder. It was Mr. Roosevelt's oath of office that gave the victory to Tammany in 1896, and now Dr. Parkhurst and Mr. Jerome want to make Mayor Low's oath perform us a similar service! Let him resign first and lead a revolt against the tyranny of oaths!"

# JEWISH FARM COLONIES.

THE recent sale of one New Jersey village, and a part of another, both of which had been connected with the Baron de Hirsch Fund, and the assertion in recent magazine articles by Israel Zangwill, to the effect that the Hirsch colonies have generally proved to be

BARON DE HIRSCH.

many persons to look with distrust upon the whole de Hirsch plan. Judge Myer S. Isaacs. President of the Baron de Hirsch Fund, says, however, in an interview printed in the New York Sun, that the work is in no way a failure. According to Indge Isaacs, the Hirsch fund in the United States. amounting to about \$3,000,000, is not employed in the work of colo-

failures, have led

nizing, but rather in assisting individuals, aiding Russian Jews to leave congested urban districts for smaller communities, and especially for farming communities.

The Jewish Colonization Association, which carries on the linch colonising work, is a European organization and has about \$4,5,00,000. This organization establishes colonies in the countries of Southern Europe, in the Holy Land, and in Argentina. The Hirsch Fund Association does not agree with this association in colonizing the Holy Land, but it does agree in the work of assisting immigrants to this country or Canada. Judge Isaacs states that there are in Connecticut, Massachusetts, and Roded Island about 75,000 Russian Jews established on farming lands. Of this number about one lundred families have been assisted by the Hirsch Fund. He says:

"The Fund prefers to scatter the persons whom it aids, sending

them only to places where it is reasonable to believe that they will have work. It established nine years ago one colony, or town, in Cape May County, N. J., which is known as Woodbine, and this has been found sufficient in the opinion of the managers of the Fund.

"The town has now renched a population of about 2,000 and is progressing satisfactorily, the people having work, either at farming or in the trades, and having homes for which they are slowly paying.

"Aside from this town and the people whom it sends there, and aiding persons to reach places where they may find occupation or to get a start, as in the case of the New England immigrants, the Fund devotes its attentions to educating individuals for agricultural pursuits or for the trades.

"At Woodbine it conducts an agricultural school, and here in New York a school for instruction in the mechanical trades. The boys of this New York school find work as helpers and soon make progress in the trades for which they have been trained.

"For those who have been through the agricultural school there are almost always places waiting, places where they are wanted to take charge of dairies or some other work about a farm. One of the graduates of this school is now an assistant professor at the New Jersey State Agricultural College at New Brunswick.

"On March 30 a class of thirty students in the Woodbine agricultural school will be graduated, and the managers of the Fund will go down to Woodbine for the occasion.

"The Fund also lends money sometimes for the construction of bouses where there is prospect of numbers of the people it wishes to help finding work. And occasionally it builds factories which it rents for a dollar or other nominal sum for the purpose of inducing men able to operate the factories to establish themselves in some particular place where the people it wishes to help may find work. This nominal rental is for a limited period, and if for specified sum in wages, with the prospect that the wage-sames may continue to find occupation there and make headway, the factory building is made over to the owner without cost."

In Chicago, the Jewish Agriculturists' Aid Society has been doing work similar to that of the Hirsch Fund. The purpose of this society, according to its annual report, just issued, is to enconrage and aid Iews to become farmers anywhere in this country or in Canada, and the work consists in taking Icwish families ont of congested Ghettos and putting them on farms. The society also advances money to prospective farmers on long and easy terms. According to the annual report, loans to the amount of \$35,000 have been made. The president states that during the past year \$9,600 was loaned, and of this sum \$1,670 has been paid back and the interest is always promptly paid. The families settled on farms in 1901 numbered twenty-eight; they had previously lived in the Jewish quarter of Chicago and had depended more or less on Jewish charities. The land taken up aggregates 2,890 acres. Five men rented 330 acres, 11 purchased 640 acres, and 12 filed homestead claims on 1,920 acres of government lands. Of the 105 families settled since the beginning of the society, 89 are still on their farms. Outside the loans to the families, the actual expense appears to have been less than \$3,000, or about \$230 a year.

# LETTERS AND ART.

# CAN A NEWSPAPER EDITOR BE AN HONEST MAN?

THE editor of a successful newspaper in one of the smaller American cities writes an autobiographical article in which he seriously answers the above question in the negative. This editor, who makes his "Confessions" in The Atlantic Monthly (March), goes so far, indeed, as to express doubt whether a newspaper in a small city can be termed "a legitimate business enterprise." He writes:

"It does not do in America, much less in The Atlantic, to be morosely pessimistic. At most one can be regretful. And yet why should I be regretful? . . . I have my own home, a place of honor in the community, the company of the great. You see me married, with enough to live on, enough to entertain with, enough to afford a bit of travel now and then. I still 'run' The Herald: it pays me my own salary (my stockholders have never interfered with the business management of the paper), and were I insistent I might have a consular position of importance. should the particular set of politicians I uphold (my 'gang,' as my rival The Bulletin says) revert to power. There is food in my larder, there are flowers in my garden. I carry enough insurance to enable my small family to do without me and laugh at starvation. . I am but thirty-four years old. . In short, I have a competence in a goodly little city. Why should I not rejoice with Stevenson that I have some rags of honor left, and go about in middle age with my head high? Who of my schoolmates has done better?"

"My regret," the editor then goes on to say, "is not pecuniary: it is old-fashionedly moral. Where are those high ideals with which I set about this business? I dare not look them in their waxen faces." He continues:

"Somewhere in a scrapbook, even now beginning to yellow, 1 have pasted, that it may not escape me (as if it could!), my first editorial announcing to the good world my intent with The Herald. Let me quote from the mocking, double-leaded thing. I know the words. I knew even now the high hope which gave them birth. I know how enchanting the vista was unfolding into the future. I can see how stern my boyish face was, how warm my blood. With a blare of trumpets I announced my mission. With a mustering day of the good old stock phrases used on such occasions I marshaled my metaphors. In making my bow, gravely and earnestly, I said, among other things; 'Without fear or favor, serving only the public, The Herald will be at all times an intelligent medium of news and opinious for an intelligent community. Bowing the knee to no clique or faction. keeping in mind the great imperishable standards of American manhood, the noble traditions upon which the framework of our country is grounded, The Herald will champion, not the weak, not the strong, but the right. It will spare no expense in gather ing news, and it will give all the news all of the time. It will so guide its course that only the higher interests of the city are served, and will be absolutely fearless. Independent in politics, it will freely criticize when occasion demands. By its adherence to these principles may it stand or fall."

"This was six years ago," remarks the writer, and "events put a check on my runaway ambition in forty-eight hours," First came an experience with the head of the largest clothing house in the city, who called with the request that "a little item" regarding a friend's dishonesty be kept out of the paper. The item was a legitimate piece of news, but the argument, "Don't I pay your newspaper for more advertising than any one else?" was convincing, and the editor, after a fierce struggle with his conscience, saw that the "little item" was suppressed. Next came the struggle over the question of legitimate versus "sensational" news. The editor of the rival paper "stole its telegraphic news bodily," and concentrated his efforts on printing 'spicy" local items-rumors, petty scanduls, and what not. Gradually our high-minded editor, from motives merely of selfpreservation, was compelled to follow in his footsteps. After that came the third conflict between the "independent" conscience and the local political machine. Conscience went under again, "I found," observes the editor, "that as a straight business proposition-that is, without any state or city advertising, tax sales, printing of the proceedings, and the like-The Herald could not live out a year, . . . My friends bought me with publie printing, and sold me for their own ends. I saw they had the best of the bargain." He concludes:

"My public doesn't care for good writing. It has no regard for reason. During one political campaign I tried reason. That is, I didn't denounce the adversary. Admitting he had some very good points. I showed why the other man had better ones, The general impression was that The Herald had 'flopped,' just because I did not abuse my party's opponent, but tried to defeat

him with logic! A paper is always admired for its backbone, and backbone is its refusal to see two sides to a question, "I have reached the "masses." I tell people what they knew

"I have reached the 'masses.' I tell people what they knew beforehand, and thus flatter them, Animing to instruct them, I should offend. God is with the biggest circulations, and we must have them even if we appeal to class prejudice now and then.

"I occasionally foster a good work, almost underhandedly, its would seem. Lake little pleasure in it. The varrous clurches, hospitals, the library, all expect to be coddled indiscriminately and without returning any thanks whatever. I have railroad transportation as much as I wish, the magazines free of charge, and a seat in the theater. These are my 'perpuisites.' Brief is no particular future for me. The worst of it is that I don't, seem to care. The gradual falling away from the high estate of my first editorial is a matter for the student of character, which I am not. In myself, as in my paper, I only see results."

# SOLON BORGLUM, A SCULPTOR OF THE WEST.

I T is not often that a cowboy becomes a successful sculptor, or that a man accustomed to the outdoor life of a prairie ranch confines himself within the four walls of a studio. But such has been the development of Solon H. Borgtum, whose work has been awarded honorable mention in the Paris Salon, and who bids fair to become one of the most representative artists that this

THE STAMPEDE OF WILD HORSES.

, Awarded Honorable Mention in Paris Salon, 1899. Now owned by the Cincinnti Museum.

Courtesy of The World's Work (New York).

country has yet produced. Borglum was born in Utah, of Danish parents, and from earliest boyhood "the plains and the wild things called him." Of his early ranch life Mr. Arthur Goodrich writes (in The World's Work, March):

"Up at Loop River [Nebraska] he built a shack, stocked his broke a with horse who threw a lartat or broke a with horse as well as he did—simple, rough fellows who bunked with him in the little cabin or rode with him on the praire. Through the long, cold winter months, facing the cutting

wind and snow of the blitzards on the plains, around the cracking for inside the cabin, while Joe Andrews, his right-hand man, or one of the other 'boys' told stirring stories of other storns and narrow escapes from death, then on through the spring work, the delight of the true cow-puncher, and the long baking animent, and finally the alert, straining days of the fall round-up, these mean and their lorses lived together daily comrades. The plants and their isolation knitted their lives into a call democracy. He had his duties, and the boys and ponies there work, and with the herds and prairie all were equal in the arch.

SOLON II. BORGLUM,
At work in his New York Stodio.
Courtesy of The World's Work.

of the great real world about them. The same storm beat upon each and the same hot sun. Such a philosophy was unconscious and inevitable.

"His early sensitiveness to the impressions of the plains and the life that ran wild over them matured into a deep sympathy and manly tenderness. Many a time he would urge or lead his pony up some undiscovered ridge of country and, reaching the top, he would syrawl on the sand-hill and watch the wind mow paths in the bunch-grass below, or look over the stretch of silent plain and hill to the illimitable blue beyond.

In the year 1800 an older brother, who was a successful painter, visited Borglum, and urged him to cultivate his latent artistic talent. More out of curiosity than for any other reason, Borglum began some rough pencil-sketching after his brother had gone, and at odd times he drew the interior of the cabin, the ranch as it was submerged in a blizzard of 1891, and cows and horses, The work interested him more and more, and he finally decided to become an artist. For some time he lived the typical artist's life in California and Cincinnati, winning his first real successes in the latter place, where he was compelled to go to the stables for his horse studies. Finally, he gravitated to the Latin Ouartier in Paris, where his remarkable sculptural pieces, redolent of the Western spirit and representing such subjects as "Lassoing Wild Horses," "The Rough Rider," and "The Bucking Broncho," made his name famous. His work was awarded special mention in the Salon, and his "Stampede of Wild Horses" was placed in the center of the United States pavilion at the Paris Exposition. Later, he sent a dozen pieces to the Pan-American Exhibition at Buffalo, Mr. Goodrich concludes his sketch of Borglum's notable career with the following words:

"Solon Borglum to-day is not in any essential way different from the man Joe Andrews and the other boys' knew in Nobraska. He is a quiet, unassuming, decided man, simple in his habits, ready still for lardship, carring nothing for luxury. He is and will always be, I think, akin to the frank, impulsive, just life of the old West. He will tell you that most of the things one reads about the frontier are caricatures, that the 'had man of the plains is no worse thau the 'had hana' of New York, and that the cowboy has many points of advantage over the Wall Street banker. He will tell you—for his sympathies are with them—that the Indians are treacherous only when they are dealt with treacherously, that to fight was their only method of guarding their rights, and that most of their massacres were just in intent. He feels as he did when a boy, that a awinging gallop on a Western pony is more real than a year's schooling.

"His art is an expression of the man who felt the fierce epic of the West beating in his heart and knew it not, who knew himself a part of a mysterious Something that he could not put into words. And, because it is always unconscious, because its never the message of a personality, it becomes the great West itself, the history of a picturesque century, the classic of the frontier, with all its virility, its rough tenderness, its rugged rhythm. The swinging rush of the stampeded herd is there, sway of the wind in the prairie grass, the mystical naion of all with the horse and its rider, as vital as the old Norse Sagas.

# THE PERMANENCE OF "RAGTIME" MUSIC.

"R dGTIME," its origin, its status, its merits and demorits, and its chances for perpetuation, have been worrying musicians for some time. In the Chicago Federation of Musicians there is a prospect of a split in the organization, leaving the players of the classic on one side and the "ragtime" champions on the other. In Denver last June the American Federation of Musicians at its annual convention passed a resolution condemning "ragtime" and recommending that its members cease playing it. In like manner the Dancing Teachers' Association have declared their intention to discourage the use of "ragtime" so far as is possible. In split of all these facts, Mr. Thomas Preston Brooke, a composer of popular music and the leader of the famous "Chiago Marine Band," has a good word to say for "ragtime." He is quoted in the Chicago Tribune as

"Ragtime was net discovered or invented by any one. Darwin says 'music was known and understood before words were spoken,' and I believe that ragtime existed in the lower animals long before the advent of man. It is simply rhythm, or intensified rhythm, and I have frequently observed animals keeping time to music having a strong, marked rhythm. Rhythm is the skeleton on which all music is hung, and if you will strip the so-called modern ragtime of its melodies you will have the music that has been in vogue since the beginning of time and that still is the only music of many of the heathen races. It is the 'juba,' buck and wing dance of the old plantation darky, and no more inspiring ragtime was ever played than that which he patted with his hands, shuffled with his feet, or plunked on his rudely constructed hanjo. All the old-time 'fiddlers' were ragtime performers. The backwoods player who sat perched on a barrel in a corner at a 'corn-husking bee,' who held his fiddle at his elbow and his bow at half-mast, played the 'Arkansaw Traveler' and 'Up Duck Creek' in a style that would put to shame many of the fellows who claim to have originated what they are pleased to call 'ragtime.'

"Drummers have played nothing but ragtime since the invention of the drum. The bass-drum is now used only to purctanate or emphasize the heavy beats or pulse of the music, but in the original 'sheepskin band' that has furnished martial music for our soldiers in times of war for centuries, the hass-drummer used a stick in each hand and helped out the ragtime rhythm of the suare-drum.

"I have often been asked.' Why do you play so much ragtime at your concerts?' and I always reply that ragtime music is what is most demanded, and that ny mission is to please—not to educate—the masses. It is not a crime to acknowledge that you enjoy ragtime. All the old masters wore ragtime, and that great poet and wizard of harmony, Richard Wagner, was a pastmaster at it. It is a well-known fact that the themes for many of our most popular ragtime songs were taken bodily from his operas. . . . . .

"Ragtime is not a fad, as many have declared, and it will not dide out." It pleases the God given sense of rhythm and will endure as long as the warm blood flows in human veins—as long as the world shall stand. Call it what you will—ragtime is as good as any other name—it existed centuries before our time and it will go on for centuries to come after we have been fregotten."

### THE "BLUNDERS" OF MATTHEW ARNOLD.

THE literary reputation of Matthew Arnold is mercileasly assailed in an article from the pen of Mr. Francis Girlerson, which appears in the current issue of The Westminster Review. Mr. Grierson maintains: (1) that Arnold was not a man of the world; (2) that he was no psychologist: (3) that he never knew the meaning of passion; (4) that he could not reason from cause to effect. "Off the great critics," he declares, "Arnold is the hardest and most flinty. He emits sparks, but no flame." Mr. Girerson continues.

"He [Arnold] was ushered in on that tide of Philistinism which arrived on these shores at the passing of the romance spirit in poetry and literature. The great ones were gone-there was no Byron or Shelley or Napoleon; there was nothing to do but to sink back in the easy-chair of platitude and introspection, and become so eminently respectable as to be imminently reactive, There were no more social upheavals, no more poetic battles to fight and win, nothing was left but the plain hemming and stitching of the poetic patterns left by the immortal fashioners of world-ideals. Sometimes the poetic remnant was not only stitched but embroidered, for Tennyson represented one side of the poetic reaction as Matthew Arnold represented the other. People had ceased to travel and think for themselves. They sat still, like Wordsworth, Tennyson, and Arnold, in one place. It became the fashion to stay at home, live in the lap of abundance, take life easy, and weave a weh of poetry to suit a plain people living in a plain age. The labor-saving, machine-made thought of the time made a nonchalant pessimist of Tennyson and a purblind preacher of Arnold."

In an age when pedantry and critical hair-splitting were going out of fashion, continues Mr. Grierson, Matthew Arnold "revived the mode, and made the search for literary and ethical nuances the order of the day":

"In speaking of the love-letters of Keats, Arnold blunders into a brutal criticism of a mere boy for the offense of writing passionate love-letters! And again, in his remarks on Shelley, he makes the astounding assertion that this poet has no influence on serious minds, and this in spite of the immense influence exerted by Shelley in his two greatest poems! In summing up the work and personality of Heme our critic spoils a fine study of the German poet by turning Philistine at the close through fear, no doubt, of being thought too liberal. Some of his judgments are not only provincial but parochial. No censure is too severe for a critic who places George Sand above Lamartine. But Arnold was no seer; and no criticism is worth a pinch of snuff that can not tell us what the next twenty or thirty years will do for the fame of an author. Much of the ignorance in this country touching French writers of genius is due to Arnold's absurd notions about them. His dictum: "The French are great in all things, supreme in none,' sounds well, but there never was a saying so profoundly superficial. Arnold mistakes power for vision and weight for quality. . . . Having been brought up in a certain social element he could not free himself from a mechanical way of looking at things. Even the best education can not change a man's nature. There was born in Matthew Arnold a reticence and reserve which forhade him attaining that personal power and independence which distinguished Shelley, Keats, and Byron. In poetry his note was the Wordsworthian note; but this moral note of itself never yet made a great poet. Universality . made Shakespeare; imagination and style made Milton; passion and imagination Shelley; beauty and passion Keats; passion and romance Byron; passion and humanity Burns. Matthew Arnold, as a poet, has plenty of hrain and muscle, hut 'the blood

is the life'; and his poetry lacks the crimson element. Arnold's idea of life was based on insular methods and enstoms. Endiged in out he was taught to use the balance-pole of introspection while walking the crack of noral platitude and automatic reasoning. He crossed and recrossed the pedantic wire with such destreity that he act became monotonous; the audience longed for a slit in the slik tights, or a sudden head-over-heels, or a syrain of the analke, to give a human turn to the performance. But no incident of the kind ever occurred. The critic, like the poet, received the decrous applause of Inands enveloped in white kids and throats encased in Victorian collars; of people in white kids and preferred the ballet, but who arrived too early to niss the wire-walking. For correction like this creates admiration, but no enthusiasm or sympathy."

The fundamentally false note in Arnold's criticism, says the writer, lay in the fact that he regarded poetry as a criticism of life, whereas, as a matter of fact, "sentiment and emotion lie beyond the critical faculty; and the man who checks his inspiration in order to criticiae his work will never attain the supreme in anything." Mr. Grierson concludes:

"If Walt Whitman had been educated in the same country and school as Marthew Artoold he would, without doubt, have become a second Wordsworth writing in blank verse and imitating other poets. His thought, instead of being as free as the air of a whole continent, would have been eraniped within the space of some parish or county. But if Matthew Arnold hinself had spent five years of his youth in France and Germany, and five years notre in America, he would have seen the word in a truer light. He knew no more of the world and its ways than he knew of pay-count and the world with the ways than he knew of pay-count and the second with the second world with the second world with the second world with the second with the second with the second world with the second with the sec

"Writers who live under restraint never attain the supreme. The faincate idea of fear is enough to put a damper on the creative institut. The fear of this or that school, this or that article, this or the fear of inspiration. Arrold imitated. Wordsworth, and Wordsworth imitated Mitton, but Mitton imitated on. The spirit of originality and fearlessness are one. Arrold lived at a time when prenching was not yet dead and modern psychology not yet born. It was not his fault that be knew so little of the world and human mature. Be the world and human mature the proponutements of a scientific and philosophical authority."

### FRENCH AND ITALIAN TRIBUTES TO RISTORI.

THE eightieth anniversary of Adelaide Ristori, to which we have already referred (see THE LITERARY DILERT, March have already referred (see THE LITERARY DILERT, March have already referred (see THE LITERARY DILERT, March have already been and signor Novelli gave their services and declaimed versies in her honor. The numerous and costly birthday gifts presented to her were exhibited on the stage, among them being a gold modal expressly struck by order of the Minister of Education, and a gold-and-diamond bracelet from Queen Helena. During recent weeks, many glowing tributes have been paid to Ristori by the press in all parts of the world. Especially interesting are the reminiscences coming from Haly, the land of her birth, and from Paris, the city that created her world-wide fame. The following account of Ristori's eventful life is condensed from Ethe.

Adelaide Ristori was the daughter of two humble dramatic artists, who were members of one of those nomad companies that in the first quarter of the last century went from city to city, and were especially peculiar to tally. They traveled in wagons similar to those used to-day by mountebanks. The little Adelaide made her debut before she was three months old a farre entitled "The New Year's Gifts," in which is introduced a new-born base concealed in a basket; the she did not adapt herself to the part, making her voice heard in the most unmistrated nor forescen! Her second appearance was at three years of age, and after that she was seen frequently in public performance. At fourteen she was taking leading parts, and at eighteen she won a great triumph as "Marie Stuart."

Instrazione Italiana (Milan) :

Soon after this began a new period of her life. "I had arrived at the age," she writes in her "Memoirs," "when the heart experiences the need of other affections than those of art. But I was not able to make up my mind to matrimony for fear that it might injure the career to which I was devoted; destiny, however, all-luted to me for companion a gentle soul, who, sharing my taste for the fine arts, far from restraining my soaring ambition, exied it, stimulating me to greater efforts. After a seried it, stimulating me to greater efforts. After a series of grave obstacles of a romantic nature, I was united in marriage to the Marquist of the stimulating me to probate of the stiften, two of whom, to our great grief, were soon taken from us by death. The two cemaining ones were destined to hill the void in our hearts." For

AS "LADY MACBETH."

AS "LUCRETIA BORGIA."

a time after her marriage she retired from the stage. Upon her return she matured the project of giving some representations in Paris, from which visit dates the period of her world-wide repntation; here were her triumphs, rendering her celebrated over all the actresses of her time. After the European trimmphs began the American. In September, 1866, she crossed the Atlantic. and remained harvesting laurels and dollars until 1868, when she returned to her native country. Memorable for the actress was the year 1873, in which she realized one of the preatest of her desires: the reciting of the sleep-walking scene of Lady Macbeth in English. In 1882, after having completed the tour of the world, in which she touched all the five continents, she returned to England, and with English actors recited in the language of Shakespeare the parts of Lady Macbeth and of Elizabeth. She was thus preparing to close her career in a most triumphal and astonishing manner. She then gave her last performance in America. Having begun her career in the modest coach of wandering comedians, she ended it in a magnificent Pullman sleeping-car, a veritable apartment. Ristori thus describes it: "In the space of sixty-six feet we had an antercom, drawing-room, two bedrooms, each with dressing rooms, two rooms for the servants, kitchen, buffet, and, besides, under the car, after the manner of a cellar, immense iron chests in which were our abundant store of provisions. It was a real house on wheels leased for five months." The last two performances of the great actress were at New York; one of "Macbeth" conjointly with the celebrated Edwin Booth, the other of "Marie Stuart." with a German company, for the benefit of the German colony. This performance, which closed the splendid career of Adelaide Ristori, was a most curious one : she, Italian, recited English lines in a German drama, with actors who spoke German.

After that she "left the peplum and the buskins, and laid of the diadem of queen of the stage, except on the occasions of two benefits, but reigns, and will reign, in the Roman society of which she is an ornament, and in the hearts of her companion in art who venerate her as a kind counselor and a generous benefactress." The society providing for aged dramatic artists is among the things most dear to her heart, and when the festivities in honor of her anniversary were first spoken of, she words letter to Tommano Salvini, president of the society: "I hear that on the 29th of January next"——the write—"many companies denoted by the society of the

A writer in the Nuova Antologia (Rome) lays stress on the part played by Ristori's father in her development, and repeats the remark she once made: "How much do I owe to my father! His good sense and his enlightened severity developed and fashioned in me the actress." He continues:

"It should be said that Ristori from the first received an extraordinary welcome. She was so beautiful, 'Ah,' one day exclaimed an old and celebrated actor, 'ah, my son, you can not imagine how beautiful Ristori was! Beautiful, beautiful, beautiful!" and the aged and famous actor, not knowing how otherwise to give an idea of such beauty, repeated with solemn gesture and fervid accent, 'bella, bella, bella!' But exactly for this reason the spectators applauded fariously without preoccupying themselves whether in that easy success the future of the young actress did not run the risk of being compromised. Ristori . . . writes of the first steps and of the paternal guidance as follows: 'He (my father) did not cease to admonish me, lecture me, disconrage my self-love, saying that only to my youth and attractions were to be attributed the enthusiastic greeting that I had received from the public, and that I must not for a moment believe that I had arrived at success.'

Referring to the celebration of the eightieth anniversary of Adelaide Ristori throughout Italy, the *fournal des Débats* (Paris) says:

"Paris would be ungrateful not to join its note to this concert of praises, for it was Paris that consecrated the renown of Adelaide Ristori. It was Paris that made of this Italian star a European star, a universal star, if one may so express oneself. She made her debut at the Théâtre-Italieu. June. 1855, in the 'Myrtha'. of Alfieri. From the first evening it was greeted with indescribable enthusiasm; it was a success more brilliant than any one was prepared for. The next day nothing else was spoken of on the Boulevard. The ticket-offices of the Théâtre-Italien were assailed by a crowd eager for noble and strong emotions. The success grew with each evening. It was madness, delirium. Lamartine was at the performance standing in a proscenium-box, leaning forward until he was half outside the box. Alexandre Dunias, between two acts, rushed to the wings, threw himself on his knees, and devoutly kissed the hands of the tragedienne and even the skirts of her peplum. More calm, but not less enthusiastic, George Sand, Henri Martin, Mignet, Ary Scheffer, Scribe, Legouvé, Madeleine Brohan, surrounded the great actress and complimented her with emotion. And as a new object of worship is not founded without abolishing the preceding one, it was declared that Rachel, who until then had been the favorite tragedienne of the public, was only a child in comparison with the new star, and that, besides, she never had had any talent, Jules Janin, in his feuilleton of the Debats, reestablished matters. He declared that Rachel and Ristori both had genius, each of its kind, and that Paris was large enough to shelter their twin glory. The press almost without exception ratified the admiration of the public, . . . For thirteen years Adelaide Ristori, who had refused to enter the Comédie Française, preferring to remain Italian, returned periodically to Paris, where she always received an enthusiastic welcome. It is known that she gave 'Phèdre' in French on the stage of the Rue Richelieu, and that she created and carried across two continents the 'Mèdée ' of M. Legouyé. which Rachel had refused to play. The glory of Adelaide Ristori is, therefore, as we said in the beginning, a French glory, In her volume of 'Souvenirs,' the great artist recognizes it in these terms: 'The French have proved to me that there is for them no frontier in the domain of art. I shall always guard in my heart feelings of profound gratitude toward them for the hospitality so generously accorded to the stranger."-Translations made for THE LITERARY DIGEST.

### NOTES.

"CLEARLY, the "platecral has his uses," observes the New York Times, apropose of the purchase of the iteriand collection of ohis by J. Pierposa Morgan at a price approaching a million deliars. The collection is believed to be the fluest of its kind in the world, and Mr. Morgan's interest secured it permanently for the Metropolitan Museum of Arl at a lime when its withdrawal to furnow had been practically decided unon.

Now that Stephen Phillips has become the most prominent living Eng. inh drammain, by the successful production of his "Clysses" and "Paole and Francesca," there is much newspaper talk in London shout the desirability of modifying the rules of comorabilp, ash is two forthcoming plars, "Mary Magalaien," in which joint Mariover is to act, and "David and Rathive in the Company of th

A NUMBER of Well-known American artists, including John La Farge, John W. Alexander, and Edwich A. Abey, have issued a statement protein in against the continued imposition of a tariff on works of art. They sav: "While the Government of Taiph has placed every legal obtacked in the way that it is works of art art one of the most withable assets of the country out one of countries of the country out one of countries are works of art after one of the most withable assets of the country out own Government strives to receive this importation of these same works of art difficult or impossible, and with such a measure of success that many great works a cataly owned by American Giltens are realized abroad to cause the tax on their importation is too heavy to be willingly borne... before the various art sactiests of New York and attimately, force the Fine Arts Federation, in the hope that Congress will be induced to abolish or modify the present tax."

# SCIENCE AND INVENTION.

# THE ADOPTION OF THE METRIC SYSTEM.

THE bill now before Congress to provide for the exclusive use of the metric system in government work is meeting with decided opposition in some quarters. The Society of Mechanical Engineers has issued an appeal to its members to exert their influence with representatives to prevent its passage. In The Electrical World and Engineer (March 8) appears a letter from Charles T. Porter, whose views seem to represent fairly well the relings of time opponents of the measure. Says Mr. Porter:

"I propose to show that the English system, employing several units, commensurable with each other, adapted to different uses, and each divided by continual basection, while making no pretension in that way, is in reality in the highest sense scientific or philosophical; and this by reason of a feature which is wanting in the metric system, and the want of which readers that system unphilosophical, unnatural, and inconvenient for the purpose of mechanical measurement.

"We employ four units of linear measurement—the mile, the yard, the foot, and the inch. Each one of these units has its individuality and a distinctive name. The same is true of the parts obtained by continual bisection. Each of these also has its indi-

viduality and distinctive name,

"The problem always is, How can the idea of any distance or dimension be formed in the mind and coaveyed to other minds with the greatest distinctness? The answer is obvious. We must employ the largest available unit of measurement, and supplement this, as required, by smaller units, employing the largest available division formed by continual bisection. When the reality can not be expressed in this way, then, and not till then, must we resort to the decimal system of division, the value of which, in this limited field, is beyond all estimation.

"Is there not power enough in the English-speaking people to defend for their own mechanical engineers the invaluable principle of employing the largest unit of measurement, and, moreover, to make its application as universal for constructive work, as it is for everything eise, for the civil engineer, for geographical measurement, for the circle and for time?

On this the paper in which Mr. Porter's letter appears makes the following editorial comments:

"Mr. Porter's strange view is that the English system is preferable for the reason that it employs a variety of units, and he gives as an example the mile, yard, foot, and inch, each of which is recommended for use in dealing with appropriate dimensions. So far as this argument claims any advantage over the use of the kijometer for roads, the meter for short distances, and the centimeter and millimeter for smaller lengths, it seems only to recommend diversity and complexity of numerical ratios. Of the same order of distinctive use and procedure would be the denomination of all house lengths in feet, all church lengths in yards, ail ship lengths in cables, all horse lengths in 'hands, etc. How distinctive such a system might be made! As to the matter of the decimal point, sums of money are always expressed, in our decimal system, in the largest suitable unit, commencing with mills and proceeding with decimal strides to biilions. If these numbers are written down there is always a danger of error from an accidental misplacement of the decimal point. A man who writes his income as ten thousand dollars, carried out to cents, is liable to make his income appear as a "To our mind, the question of the general adoption of the metric system is entirely a practical one-a matter of dollars and cents-and a philosophical discussion such as that of Mr. Porter has nowadays merely an academic interest. We venture to say that all who have lived any length of time in a country employing the metric system have experienced some surprise at the facility with which they became accustomed to its use in daily life. In making purchases the liter, the kilogram, the 50 grams, and the meter in a very short time take on an individuality quite equal to the corresponding English units; and the student very quickly finds the centimeter and millimeter adjusted to their linear value in his mind and to his eyes. Not the slightest difficulty would, we believe, be experienced by the American people in assimilating the metric system, while their gain through being able to easily interconnect the various units would be an enormous boon, and the benefit to our export trade incalculable."

### WIRELESS TELEGRAPHY'S TRIUMPH.

THE latest feat of Mr. Marconi, the transmission of intelligible messages for a distance of 1,555 miles, has already been briefly noted in these columns. We now give full particulars from an article in The Scientific American (March 15). It appears that on the last westward trip of the American Line şteamship Philadelphia, Marconi made experiments to determine excity to what distance it was possible for his station at Poldiu, Cornwall, to transmit an intelligible message. He asserts that at a distance of some 1,55 miles he received distinct communications, and that simple signals were perceptible at 2, too miles. Says the writer of the article referred to:

"Those who were skeptical when the news was first spread ast December of transoceanies signaling will have but little to criticize in the last performance of Marconi. The officers of the Philadelphia and the tape of the recording instrument fully corroborate the statements of the inventor. In Newfoundland Marconi had received the sound of the signal 15° through a telephone-receiver, so faint was the ticking of the instrument; but now he can exhibit ribbons of paper bearing the messages sent from Cornwall up to a distance of 1,53 miles, and after that the signal letter 5° to a distance of 2,000 miles.

The Philadelphia sailed from Cherbourg on Saturday, February 1, at 6 P.M. Two hundred and fifty miles west of Poldhu the first experimental message was received, which read, 'Stiff southwest breeze. Fairly heavy swell.' That same night, when the Philadelphia was 500 miles off Cornwall, a second message was received, reading. 'All in order. Sign. Do you understand? Both of these messages the chief officers of the ship signed. On the 4th, when the Philadelphia had passed the 1,000-mile mark of her voyage, the captain and first officer of the vessel received a message, 'Fine here. Thanks for telegram.' The following morning saw the receipt of a fourth message, when the Philadelphia was 1,163 miles west of Poidhu. It read, 'May every blessing attend you and your party.' The fifth message, which was the last that came in words, was received on the same day, and its import was somewhat similar to that of the second. After the receipt of the fifth message the letter 'S' was telegraphed by the operator at Cornwall merely to inform those on board the vessel that the station was still at work. Finally, when the liner had passed the 2,099th mile, the tests were stopped. The messages mentioned were only a few of those actually received. Communication was kept up almost constantly; but it was deemed unnecessary to submit to the public more than haif a dozen signed tapes.

Marconi, the writer goes on to say, hopes to succeed in transmitting messages commercially across the Atlantic during the coming three months, from his present station at Poldhu to two on the American side, one at Cape Breton and the other at Cape Cod. Substantial towers will be erected to withstand the fierce gales of the coast, and the instruments will be of the latest type and highest power. To quote again:

"The receiver of the *Philadelphia* was not constructed for long-distance work. For that reason it was capable merely of receiving, not of sending, messages. The success obtained may be fittingly termed a triumph for Marconi and for his system.

"At the present time wireless telegraphy has been of service chiefly in placing steamships in communication with one another. Both in the merchant marine and in the navies of the world we may soon expect to see a rapid development and a more general introduction of the Marconi system and as well as of its European rivals. That wireless telegraphy will sooner or later become a formidable competitor of the submarine eable seems fairly certain; but whether it will ever supersede land telegraphy is a question open to some discussion. Wireless apparatus is so much costher than the simple Morse instruments commonly used that, despite the necessity of using wires and poles, it is doubtful whether communication on land will be seriously modified for many a decade to come. Furthermore, it must be remembered that the sneed of transmission by the Morse system is far higher than that which has so far been obtained by ethereal telegraphy. The quadruplex systems of telegraphy which have been introduced in late years have increased the speed of transmission by means of wires to an enormous extent. Many sets of Marconi instruments would be required to send the messages which are carried by a single wire in a quadruplex system. But after all is said and done it can not be disputed that a new method of communication has been devised which promises to be fully as important as the inventions of Bell and Morse."

### "THE OPEN DOOR" IN THE TREATMENT OF THE INSANE.

THIS phrase, so familiar in the domain of international trade, bids fair to acquire a new meaning when applied to therapeutics. Dr. E. Marandon de Montyel, medical director of the Asylam of Ville Evrard, tells us in the Revue Philanthro-pique (Paris, February 10) that it is now used to designate the new methods in the treatment of the insane which have been inaugurated in Scotland, and which, Dr. Montyel believes, bid fair to replace the old methods of isolation. He says

"The new treatment is the exact opposite of the old. The closed asylums are replaced by buildings with open doors, without walls, exterior or interior, or covered galleries, and arranged in the form of a village where the harmless patients, constituting from 60 to 70 per cent., may circulate freely, while the 30 to 40per cent. of dangerous ones are kept in villas elosed only with ordinary locks and a neat grating gate. But it is not only the establishment that the open door transforms; its effect is seen especially in the treatment, which continues as much as possible the ordinary life of the patient. The visits of relatives and friends are encouraged; they may take their meals with the inmates, in a room which resembles a restaurant, may walk with them, and during the course of treatment may take them home for days. During convalescence, these home visits may last for months. There is absolute liberty in writing and an abolition of all punishment except restriction of liberty, which is the only means used to preserve order."

It is stated by Dr. Montyel that under this method escapes are less frequent than under that of the closed door. He goes on to say

"If facts did not prove the error of incarcerating insane patients, a little reflection might do it. Every lunatic is at bottom a melaneholiae, the gayest of them is seeking to drown his melancholy and weeps oftener than he laughs. Must it not increase this melaneholy, coavineing one patient that he is a knave and another that he is a victim, to confine them in a condition alto gether different from that to which they have been accustomed, to deprive them of all initiative, and force them to a passive obedience worse than that of a barrack because it is more perpetual? Assuredly it must, for althe they are madmen they have no teased to be men. Everything in an asylum should tend not the contrary, to drive away sadness and iscluce gasety. As the joyous must of David dispelled the melancholy of Saul, as the heart should be a more sufficient to the same patient, everything he sees and hears, should have the same object. All thorns and pebble should be removed from his path, the aim should be to nake him walk upon a bed of roses, instead of subjecting him to the torture to which the charming enphemism in vogue has given the name of isolation. "Transattoin made for Tute LITERANY Dioest."

# THE IMPROVEMENT OF THE HUMAN RACE.

In a recent lecture on "The Possible Improvement of the Human Breed." Dr. Francis Galton shows by statistics that un improvement of the breed in man is desirable, and that a very slight change in this direction might have great results; and he concludes with the hope that some day landowners may feel as much pride in having a fine breed of men on their estates as they now do in their prize herds of eather of flocks of skeep. Mr. F. Legge, in a review of this lecture in The Academy and Literace (London, February 15), while agreeing with Dr. Galton in his hope, remarks that the process by which this last result is to be obtained is not easily discoverable. He goes on to say:

"In a society founded, like ours, upon the greatest possible liberty of the individual, any attempt at compulsion is out of the question, and it is very difficult to see how any inducement that could be held out would have any practical effect. Every father, whether duke's son or cock's son, would, I suppose, have fine rather than purp, ehildren if he could, and not prospect in the way of money prises would lead him to take pains that parental vanity would not."

But more than this is true. Even if we could bring about the marriage of the fit, it would be of no avail without the destruction or isolation of the unfit. He says:

"Some such course has actually been recommended by Dr. Robert Anderson and other penologists in the cace of habitate for the penologists of the cace of habitate for the penologists of the cace of habitate for the penologists of the penologis

Even thus, according to Dr. Galton's critic, we should not arrive at the wished-for result. He asks:

"Would the race thus artificially created endure? I think not, because its physical excellences would be probably neutralized by corresponding mental deficiencies. .. Moreover, the race which we have imagined would be practically withdrawn from the struggle for existence which operates upon the humbler members of their species, and all blistory goes to show that this alone produces a tendency to insanity, or, at the least, weakness of brain. ...

"The relation of insanity to evolution has not hitherto been very generally appreciated, but it now becomes fairly plain that insanity is but one of nature's means of eliminating the unfit. 'Whom the gods wish to destroy they first drive mad' is quite as true of man in the group as of individuals. Esquirol showed some time ago that the proportion of insane to sane among the royal families of Europe was, when compared to the same ratio among the common people, as sixty to one; while Hacekel thinks that, if as accurate statistics could be obtained of the prevalence of insanity among the aristocracy, the number of insane individuals among them would be seen to be 'incomparably larger.' The aristocracy of the Continent, and especially of Germany, to which we may suppose him to refer, is not, like our own House of Lords, continually recruited from the ranks of the bourgeoisie, and has therefore become, like the group of royal families, excessively 'inbred.' With the lower animals the same result of artificial selection, when pushed to excess, frequently appears.

The experiences of circus proprietors and showmen, together with those of scientific experimenters like Mr. Hobbouse, are hardly wanted to convince us that while 'high-bred'-that is, carefully selected-animals are generally excessively stupid, the most intelligent and easily taught horses, dogs, and cats are of mongrel breed. Nor is this all. One of the most frequent forms of mental disease among animals shows itself in the form of a perversion of the natural instincts which leads the parent to illtreat, or sometimes to devour, his or her own offspring. This seems to be especially prevalent among high-bred stock, and one seldom passes a pen of prize sheep without noticing one or more ewes tied by the head to the hardles, in order that the lambs may get a chance at the food of which these 'unkindly mothers, as the shepherds call them, would otherwise baulk them. How far this cause would operate in the case of man is difficult to say. but statisticians tell us that the use by certain pampered classes of preventives against the increase of the family-which seems due to the same perversion at one remove-has already caused a perceptible falling-off in the birth rate. Taking, therefore, all these facts together, it seems that any serious attempt to improve the breed of man by prtificial means would be met by nature with the elimination of the improved race."

### WEATHER CONDITIONS AND BIRD-MIGRATION.

SOME interesting investigations have recently been made on the connection between the migration of birds and the weather by the Meteorological Office at London, comparing for the purpose the observed flights of migrating birds over the Ziritish Isles, and the daily weather reports. It is clearly shown that a close relationship exists between the two. The Revue Kientlifique (February 21), which discusses an analysis made by Cicl et Terre of these observations, remarks at the outset that the weather to be studied is not that of the places toward which the birds are flying, but that of the region whence they come, as only the latter can influence their movements. It goes on to say:

"In the spring and the autumn at certain favorable times, the movements are continuous and regular; if the atmosphere and only slightly disturbed, the migrants are not disturbed; but if the weather becomes variable, their movements are somewhat hustoned.

"Nevertheless, certain weather conditions have a decisive influence in hastening or retarding the migration. Marked bad weather may render it impossible, altho, on the contrary, favorable weather (following in bad period may decide the birds to hurry their departure. A sharp cold snap warns them to seek tho south, and these cold waves necopinary anticyclonic periods where the wind is feeble and very favorable to prolonged flight. The temperature is the most important factor; by it the migration is regulated, when the other meteorological couditions are favorable.

"From the end of September to the beginning of November the autumn migrations from the northeast in the British Isles are clearly influenced by change of weather. In ordinary seasons this period is marked by great movements of immigration, accomplished not only by several species, but by an immense number of individuals. It has been shown that all these great movements are due to the predominance of atmospheric conditions favorable to migrations in Northwostern Europe. These conditions result from the distribution of the barometric pressme; that is to say, from the presence of a great anticyclone on the Scandinavian peninsula, with feeble gradients extending to the southwest, over the North Sea; on the other hand there are these cyclonic conditions to the west of the British Isles with a center of low pressure on the west coast of Ireland or sometimes to the south. Consequently the weather is clear and cold, with light and variable winds, in Norway and Sweden, while in England the sky is overcast and there are strong east winds. This period is preceded in Scandinavia by cyclonic conditions that oppose migration and at the same time warn the birds that it is time to go. The cold weather that follows the formation of the cyclone is another spur, and so it is not astonishing that a brisk movement toward the south occurs as soon as the weather is favorable.

"The great spring migrations and most of the smaller ones are undertaken by the birds in the same conditions of pressure that are so flavorable to the autumn migrations, that is to say, a high pressure to the northeast of the British Isles, over Norway and Sweden, with slight gradients to the southwest. As in autumn, favorable periods generally follow weather that is decidedly unprositions to the migrations of the birds.

"The importance of the winds in relation to the migration of birds has been greatly exaggerated. The direction of the wind would appear to be indifferent to them; but its force may put a stop to the movement or carry the birds away from their route. The birds do not migrate when the wind is exceptionally strong, but they pay no attention to its direction. It is true that east winds prevail almost invariably during great movements, and thiertor they have been considered as a determining cause of migration. But it is not so; and we may say that these supposed favorable winds are simply another direct result of the distribution of atmospheric pressure that favors the movement. As far migration, but they are produced by cyclonic disturbances to the north or east of the British Isles, that is to say, over the regions whence our autum enigrants come.

"We have said that storms may either arrest the nigration or prevent it. They carry certain kinds of sea-birds out of their paths, and thus these birds sometimes appear in numerous flocks on the Buglish coast. In stormy weathor, characterised by the existence of high pressure, a great number of birds hurt themselves violently against the lanterns of lighthouses and so lose their lives." Pranstations made for THE LITERARY DIGEST.

### THE EARTH AS A GREAT STEAM-BOILER.

THE possibility of utilizing in some way the enormous internal heat of the earth has occurred to more than one thinker. That such utilization may actually be accomplished is now believed by some scientific men. Prof. T. C. Mendenhall made to suggestion recently, and now a series of measurements of underground temperatures is being made by the British Association for the Advancement of Science. Prof. William Hallock, of Columbia University, in an interview reported by Theodore Waters in The World's Work (March), expresses his belief that the iden is feasible. He says:

"It is not merely a question of getting steam, it is a question of the quantity of steam that can be had. Hot water is oven now drawn from a well and used to heat a dwolling near Boiso City, Idaho; and when we pumped out the water which had leaked into the well near Pittsburg, it was so hot that I could not hold my hand in it. Its temperature was about 130'. But while the Pittsburg and the Wheeling wells are enpable of heating the water that is left in them over-night, even if their depth were sufficient to turn that water to steam, it would require many hours of waiting, which would rob it of all commercial value. In other words, there would be not the slightest difficulty in obtaining steam from the earth's interior, because that involves merely n little extra labor in boring down into the very hot area, and it is as easy comparatively to bore 10,000 feet as it is to bore 6,000; but in order to give the steam commercial value a method must be provided for dropping the water to the hot area, allowing it time to heat, and yet having it returned to the surface as steam without for a moment interrupting the flow.

"Suppose two holes were bored directly into the earth 12.000 feet deep nad, say, fifty feet apart. According to the measurements I made in the Pittsburg well, at the bottom there would be a temperature of more than 240 -far above the boiling-point of water. Now, if very heavy charges of dynamite or some other powerful explosive were to be lowered to the bottom of each bed and exploded simultaneously, and the process repeated many times, I believe the two holes might have a sufficient connection established. The rock would be cracked and fissured in all directions as in deep oliv-wells when they are shor; and if

only one avenue were opened between the hotes it would be

"The shattering of the rock around the base of the holes would turn the surrounding area into an immense water-beater. The water poured down one hole in the earth would circulate through all the cracks and fissures, the temperature of which would be over 240°, and in its passage it would be heated and turned to steam which would pass through the second hole to the earth's surface. The pressure of such a column of steam would be enormous, for, asside from the initial velocity of the steam, the descending column of cold water would exert a pressure of at least 5,000 pounds to the square their which would drive up through a mechanical one, and the chief difficulty would be the connecting of the holes at the bottom. This accomplished, the water-beater would operate itself and a source of power be established that would surpass anything now in use."

Professor Hallock believes that this plan could probably be carried out for \$80,000, and that the owners of the deep well at Pittsburg, already referred to, intend to continue boring it until they reach a region of great heat. The Yellowstone Valley would undombtedly, he thinks, yield commercial temperatures at much shallower depths, judging from the geysers of this region. The heat might be milized in other ways besides the generation of steam; for instance, it might generate electricity directly by means of great thermopiles. "Such a system," Professor Hallock remarks in conclusion, "might change the commercial aspect of the world."

Ancestors of the American Indigenes.—Dr. Charles Halock, passages from whose interesting article on this subject we quoted in a recent issue, writes to The Literary Digest that he regards the Korean immigration of the year 541, which led to the founding of the Mexican empire in 135, as "but an incidental contribution to the multiplying inhabitants of North America." He says: "The Indiancy or Indigence, of both North and South America originated from a civilization of high degree which occupied the subequatorial belt some 10,000 years ago while the glacial sheet was still on. Population spread northward as the ice receded. . . The gradual distribution of population over the higher latitudes in after-years was supplemented by accretions from Europe and Northern Asia centuries before the coming of Columbias."

# SCIENCE BREVITIES.

It is stated in *La Nafure* by M. Albert Landrin, in an article on the twins Radica and Doodica who were recently separated by a surgical operation in Paris, that more double-monstrosities are born parily than most people have any idea of. He places the number in Europe alone at one or two per week, Very (ew, however, live long after birth.

EXPERIMENTS on the imitation of vital phenomena, along the lines of those of Dr. Bütschli, recently described in these columns, have been carried on by Dr. A. D. Honghton of Chicago. He announces that he has succeeded in creating a protoplasmic cell which exhibits many of the attribotes of the ameba, but that he has not yet been able to generate one which would be self-perpetuating for an indefinite period. In The Current Encyclopedia (January) he explains his work as follows: in producing an active protoplasmic mass containing distinct nucleus-like centers, which exhibited ameboid movement. It assimilated nutriment, it gave the reaction to aniline dyes that organic celts do, it had a protoplasmic reticulom, it showed selective affinity, and it even made feeble attempts at perpetuation of its species. It split into four or five cells, which exhibited the same qualities as the mother-cell. After a period of activity varying in differing experiments from half an hour to three weeks, the cells lost their power and became inert masses. My cells fulfil all the conditions of living cells, such as amebæ, except as to the power of perpetuating their kind indefinitely. I think we shall soon dis cover the necessary element to make a complete and living organism."

Dr. Honghton also refers to the discovery made by Professor Loeb, of Chicago University, that certain marine creatures will reproduce with the addition of the male element if immersed in certain solutions, and adds : "Professor Loch's discovery seems to point the way for the search for the male element, which appears to be lacking for my cells. I am now trying to find a solution which will impregnate the cells produced from the chemicals, and then the problem of creating life chemically will be solved."

# THE RELIGIOUS WORLD.

### CAN CHRISTIANITY SANCTION DUELING?

DUELS with fatal results have been so frequent in Germany in recent months that it is a matter of interest to learn what the church and its representatives think on the subject, especially as every one of those who fell in these combats was accorded a Christian burial. It is in the nature of a surprise to find that there is a class of Protestant pastors in Germany who are practically ready to defend the custom. The Social Democrats have invented for these men the name of "Duellpfaffen." All the leading German church papers note the existence of this pro-duelling sentiment. At the funeral of Adolf von Benningsen, the latest victim of the custom, the officiating minister, Pastor Langelotz, of Hanover, referred to him as an "unfortunate man compelled to take refuge in the weapons in order to defend the honor of his family and of himself." Benningsen in this case had been the challenger. A noted representative in the German parliament, Pastor Schall, in the course of a public discussion in the Reichstag, made this statement. "It must be granted to the man whose honor has been called into question to defend himself and to repel the charge. In this case, it is often necessary to decide whether he can live as a Christian or, if he will, defend his honor by an open combat to the death,"

Count Mirbach, not himself a pastor, but a man prominent in church affairs and standing high in court circles, says. "There are cases thinkable where a duel is inevitable and unavoidable, and where the honor of a man or of his family makes it also lutely impossible for him to follow out the commands of his religion." This seems to concede that Christianity does not satetion dueling and that a Christian can engage in a duel only by violating his principles. In this respect the Prussian General Synod is inclined to a more liberal view of the custom. When appealed to for a condemnation of dueling as n "siu," it declared that this would not be done, as there are many members of the Synod who are excellent Christians, but who thought that under certain encumantauces the duel could not be avoided. The Synod, however, adopted a resolution stating that dueling is "against the command of God."

Another recent defender of the duel is Dr. Cuny, a man high in the affairs of state in Berlin, but not in the church. He asserted: "We openly maintain that there are many affairs of honor which can not be settled except by a resort to arms. No matter how much the Philistine may rage against dueling, this remains an excellent educational means."

The wast majority of the pastors and church papers vigorously condemn ducling as altogether unchristian. As illustrative of their sentiments, we quote from the address delivered by Pastor Gemmel, at the funeral of Lieuteuant Blaskowitz, who, on the basis of John Xi, Xi-Xi, Santon.

"Our souls are deeply indignant at the direful event. Not that we condemn the young man who fell a victim to a barlarous custom, for he is now before a higher Judge; but we condemn the sin and the spirit of nuchristian wickedness that has led to this result. Oh, where are the men who are strong enough and courageous enough to resist the spirit of false houor and of godlessness that have brought such evis!"

Later on Pastor Gemmel wrote to the Reichshoft that he had received the warmest words of commendation for his address, even from officers in the army. In the same periodical (No. 276) the famous Pastor Bodelschwingh wrote words of praise, and added:

"One of the leading causes for the evil of ducling is to be found in the church itself. As long as the representatives of the Protestant churches do not come out boldly against the direful' evil, the church has but little right to judge those who partieipate. It is shaming to the Protestants that the Catholic churches

[March 29, 1902

have taken a more determined stand on the subject and will not allow their members to take part 10 such a combat."

Bodelschwingh regrets that the last General Synod of Prussia did not petition the Emperor to put a stop to dueling in the army altogether, as he readily could have done by his mere order, —Translation made for THE LITERARY DIGEST.

### "THE METAPHYSICAL MOVEMENT."

W HAT is characterized by its advocates as a new departure, "essentially American in its origin," and marked at once by "sturdy optimism, carnest purpose, and settled confidence," is the metaphysical movement of to-day. Mr. Paul Tyner, one of its leading coponents and a former cition of The Arena, declares that "The New Thought" (as the metaphysical helief is somewhat vaguely termed) "now numbers more than a million adherents, of whom more than half a million aro in the United States." He continues fin the March Review of Reviews).

"To most of these the cult stands for a practical, overy-day working philosophy that takes the place of a religion and is, indeed, to these people the only possible religion. At the same time thousands of its followers retain their conventional affiliations, finding in the 'New Thought' welcome aid to understanding and appreciation of the living spirit under the dead letter in all religions. Thus, the new teaching appeals equally to people in and to those out of the churches, emphasizing the essentials on which people of various beliefs, or of no belief, may very humanly unite. One reason for its rapid spread in popularity is hero apparent, and makes interesting an examination of its development. The movement has for its basic purpose nothing less than a lively realization of the metaphysical truth at the base of all religion and philosophy, not as mystical or intellectual abstraction merely, but as a working force in actual life, eligible to all men everywhere."

Speaking of the literature of the movement, Mr. Tyner says

"This periodical literature of the 'New Thought' has grown steadily until it now numbers more than one hundred monthly and weekly publications in this country alone. While the new movement is affecting in some measure every aspect of modern life, its influence is most marked in the world of letters. Beginping with a literature all its own, the thought currents most distinctly identified with the new merophysics are at last permeating and modifying much of our magazine matter, and imparting a new and indubitable charm to a large proportion of current books of fiction and essays. Indeed, it is becoming ovident that the movement has already outgrown the stage when its literature was necessarily written from an unusual and little understood standpoint and addressed to a special and limited audience. The 'New Thought,' in its broader aspects at least, is no longer arcane to the multitude, and even the Philistines are beginning to hear it gladly."

The first of the "New Thought" writers to become popular with the general reader was Henry Wood, of Cambridge, Mass., whose books have sold to the number of over fifty thousand. Other well-known figures in the metaphysical movement are floratio W. Dresser, author of "The Power of Silence" and "The Christ Ideal"; Rajan Waldo Trine, author of "In Tune with the Infinite" and "What All the World's a-Seeking"; and Leander Edmund Whipple, editor of Jirid and The Arena; and Leander Edmund Whipple, editor of The Metaphysical Magazine. The Rev. Dr. R. Heber Newton, George D. Herron, John Jay Chapman, Bolton Hall, and Miss Lilian Whiting have all put themselves on record as being in sympathy with the aims of this new movement. Probably the most popular of the "New Thoughtt" propagandists is Mrs. Helen Wilmans, who publishes a weekly jusper, Freedom, a the rhome in Sea Breeze, Fla. Mr. Tyner outlines the tenets of the metaphysical movement in the following word:

"Not merely the cure of disease, important as that is in itself, but also the entire interdependence of mental and physical states, and the relations of cultivated thought and will to harmonious growth in character nod usefulness, are involved in the better understanding of the new metaphysics. Its promise of peace, harmony, light, healing, and uplift has called widesprough, light, and upsection of the calcium of the practical metaphysician. All these almost the basis in a right understanding of the nature had power of the mind. The present metaphysical movement, in its vital and growing asystes, is in large degree the result of an attempt to account for mental healing and to give it a lucid and rational interpretation as well has as scientific basis.

"The new metaphysics calls for faith behind works, and for works proving faith. The reality in being of an infinite, eternal, and intelligent energy, principle, or substance, perceptibly active everywhere and always in the phenomena we call life, is its basic premise. This energy, intelligence, substance, law, or principle. while itself the Absolute and Unmanifest, it is reasoned, is the 'great first cause ' of all manifestation of every order in the phenomenal world. If it is not as obvious in the little things of our personal life as in the cosmic processes that this Infinite Intelligence is ever a 'power making for righteousness,' tho fault is held to be, nt bottom, simply one of the individual's consciousness; a lack of recognition and appreciation of his own oneness with the One Life: a mistake calling for correction in his way of thinking. Many Mental Scientists call this immanent power 'God,' which has caused them to be reproached by the unthinking as Pantheists. Others are content with Herbert Spencer's phrase, 'Infinite and Eternal Energy ': still others are partial to the term Being.' Perhaps the majority believe that 'Mind' convevs the desired meaning accurately enough for all practical pur-

"This projugandin is not for a moment to be looked upon as that of a new party, sect, or denomination. It natagonizes no sect or denomination as such. Its spirit is cheerful, optimistic, positive, and constructive. Suggestive of genuine Epicuraisus rather than the Stoic teachings, it unites the good in both, It inculcates abrave, high endeaver forever making for progress, yet would advance steadily, serundy, and without friction, inof the work of the world. To the Quicking of Molinos and the Quakers it joins the enterprise, the daring, and the strenuousness of the molern spirit, balancing the one with the other, and

avoiding the extremes of either. It thus stauds for power in peace and strength in serenity, assuring that equilibrium in the individual and collective life which is essential to healthy progress and permanent happiness."

### LOSSES OF THE ROMAN CATHOLIC CHURCH IN THE UNITED STATES.

THE results of a mission tour in the United States have led the Rev. M. F. Shinnors, an Irish Roman Catholic priest, to write in The Irish Ecclesiastical Record (Dublin) of the losses sustained by his denomination in this country. He considers them large:

"The population of the States has been increasing by leaps and bounds. Has the church increased her membership in the same ratio? The answer must, unfortunately, be a decided negative. There are many converts, but there are many more apostates. Large numbers are rescued from infidelity or heresy, but larger numbers lapse into indifferentism and irreligion. They begin by being bad Catholics and they end in agnosticism. It is very hard to give even an approximate guess at the number of these deserters, but it is, alas! too evident that they may be counted by the million. During the last sixty years, I think, it is no exaggeration to say that as many as 4,500,000 men and women of the Irish race emigrated to America. Of these nearly all were Catholies, and nearly all left their homes in the prime of youth or in the full strength of early manhood. With the proverbial fertility of the Irish race is it too much to say that, at present, there ought to be as many as 10,000,000 Catholics of Irish birth or blood in the United States? But besides these you have to reckon some millions of Catholies from other countries, from Germany, Poland, Italy, France, Austria, and Canada. I do not think, therefore, that I am very wrong in asserting that if all emigrants and their children had remained faithful to the church, we should to-day have in America a population of 20,-000,000 Catholics. In other words the leakage of the past sixty years must have amounted to more than half the Catholic population, as account must be taken of the large numbers of converts that I have alluded to,"

The reverend gentleman then proceeds to inquire into the proportion of Irish Catholics who sever their connection with the church. He says:

"One can not conjecture with anything like accuracy, but there is no doubt that the proportion is large. Indeed, there are reasons to fear that the great majority of the apostates are of Irish extraction, and not a few of Irish birth. For the Irish seem to get much more easily Americanized than other people, and to be Americanized (I use the word, of course, in an obvious sense) and Canadians, keep up their own language, and their ignorance of the language of the country is a protection for their faith. The Irish unfortunately have not a language of their own to preserve, and the consequence is that they plunge at one into the habits and manners and modes of speech of those around them; they become a few months after their arrival more American than the Americans themselves; they are caught many of them by the spirit of irreligion that breathes everywhere around

The authorities of the Roman Catholic Church in the United States appreciate this state of affairs, according to Father Shinnors, who says:

"From Cardinal Gibbous, from Archbishop Corrigan, from Archbishop Ryan, from every Americau excelesiate that takes an interest in our Catholic nation, comes the constant cry to the Irish hierarchy and clergy: Stop the tide of emigration. Save your flocks from the American wolf. Sacrifice not your faithful children to Moloch. For your people, America Is the road to bell!"

Commenting upon the conditions thus revealed, Freeman's fournal (Dublin) observes:

"Father Shinnors appeals to the priesthood of Ireland to do all in their power to discourage an emigration that involves such perils to the faith and character of their people. American bishops and priests are most vehement in their appeal to 'stop the tide of emigration.' Irish priests, says the writer, could do much to destroy the glamour that surrounds American lalor and American citizeuship with a false splendor. That is true. But until much more has been done to make life possible for Irish boys and girls in their old land the tide will flow, and the melancholy results described by Father Shinnors will follow for thousands of our peasanty.'

### IS BELIEF IN MIRACLES ESSENTIAL TO CHRISTIANITY?

N O question in modern religious thought is weighter than this one which Prof. Charles W. Pearson's much discussed atterance has served to bring once more into prominence. The problem, of course, is far from being a new one.

Indeed, it has been noted in several quarters that the Methodist professor used much the same arguments as those embodied in Hume s essay on miraeles, published a hundred and fifty years ago. In uone of the theological controversies of the past century was the conflict more earnest than in this one over miracles, Renau. Strauss, and Huxley ranging themselves actively on one side. Bishop Lightfoot, Dean Farrar, and Mr. Gladstone on

DR. W. ROBERTSON NICOLL.
Courtesy of The Bookman.

the other. The Rev. Dr. W. Robertson Nicoll, who is best known as a journalist, but who has also done considerable work in the field of theology as editor of the London Eipesilor ann "The Expositor's Bible," gues over the ground again in his new book, "The Church's One Foundation." The first few sentences of the book show that this "foundation," according to Dr. Nicoll, is the miraculous Christ, and that, if there be no such Christ, "Christianity passes into mist and goes down the wind." He declares:

"The church can not without disloyalty and cowardice quarrel with criticism as such. It is not held absolutely to any theory of any book. It asks, and it is entitled to ask, the critic: Do you believe in the Incarnation and Resurrection of Christ? If his reply is in the affirmative, his process and results are to be examined earnestly and calmly. If he replies in the negative, he has missed the way, and has put himself outside the church of Christ. If he refuses to answer, his silence has to be interpreted. . . . No one argues against the right of philosophers to affirm that goodness is everything, that miracles are impossible, and that nothing in Jesus Christ has any importance except his moral teaching. But Christian believers in revelation are compelled to say that these philosophers are not Christians. If they refuse to do so, they are declaring that in their opinion these beliefs have no supreme importance. To say this is to incur the penalty of extinction. For Christianity dies when it passes altogether into the philosophic region. To believe in the Incarnation and the Resurrection is to put these facts into the foreground. Either they are first or they are nowhere. The man who thinks he can hold them and keep them in the background deceives himself. They are, and they ever must be, first of all. So, then, the battle turns on their truth or falsehood. It does not

turn on the inerrancy of the Gospel narrative. It does not turn even on the authorship of the Gospels. Faith is not a belief in a book, but a belief in a living Christ,

Dr. Nicoll holds that here is a discussion which every Christian believer must euter upon with keenest zest, since "it is a controversy not for theologians merely, but for every man who has seen the face of Christ and can bear personal testimony to his power and glory." He continues:

"If we assume at the threshold of Gospel study that everything in the nature of miracle is impossible, theu the specific questions are decided before the criticism begins to operate in earnest. The naturalistic critics approach the Christian records with an a priori theory, and impose it upon them, twisting the history into agreement with it, and cutting out what can not be twisted. For example, the earlier naturalistic critics, Paulus, Eichborn, and the rest, insisted on giving a non-miraculous interpretation. Strauss perceived the unscientific character of this method, and set out with the mythical hypothesis. Baur set to work with a belief in the all-sufficiency of the Hegelian theory of development through antagonism. He saw tendency every where. . . . Dr. Abbott sets out with the foregone conclusion of the impossibility of miracles. Matthew Arnold says: 'Our popular religion at present conceives the birth, ministry, and death of Christ as altogether steeped in prodigy, brimful of miracle, and miracles do not happen.

The trouble with all these and similar critics, declares Dr. Nicoll, lies in the fact that they start out with the assumption that "God can not visit and redeem His people" and that "His arm is chained and can not save." Is it not much more rational. he asks, to take the view that miracle is "the fit accompaniment of a religion that moves and satisfies the soul of men, and that asserts itself to be derived directly from God "? He goes on to say.

"Miracle is part of the accompaniment, as well as part of the content, of a true revelation, its appropriate countersign. Of course those who take this ground do not deny, but rather firmly assert, the steadfast and glorious order of nature. But they hold with equal firmness that God has made man for Himself, and that if He has sent His Son to die for them, the physical order can not set the rule for the way of grace. If God has relented, nature may relent. They believe that if there is a personal God miracles are possible, and revelation, which is miracle, is also possible. They are not dismayed when they are told that the Gospel age was the age when legendary stories and superstitions and miraculous pretensions of the most fanciful and grotesque kind abounded. Nav. rather their faith is firmer, for they take these stories and compare them with the Gospel miracles, and they say, How is it that the stories of the New Testament are lofty and tender and beautiful and significant, while the rest are monstrosities? . . . . Granting the entrance of the Son of God into human history, granting the miracle of the Incarnation of the Supreme, there is little to cause any difficulty. . Without the Incarnation, without the Resurrection, we have no form of religion left to us that will control or serve or comfort mankind."

The Gypsy's Religion .- "It is said that the gypsy has no religion," remarks Mr. Riley M. Fletcher Berry in Frank Leslie's Monthly (March) : "but, to be strictly true, the statement must be modified." He continues:

"In the United States there are some hundreds of Germau-American Romanys, the list headed by the Freyers, and many Irish and Hungarian gypsies. The distinctively foreign Romanys, including all those just mentioned, but excluding the pure English and American Romanys (the latter of English ancestry near or remote), usually profess the Roman or Greek Catholic religion, and have their children baptized in the ceremony of the Catholic Church. I have seen rosaries and pictures of the Madonna, as well as images of the Romanist and Greek saints, in the wagous of Irish and other more strictly foreign gypsies; but these outward-eye evidences and ceremonials are the most that Roman Catholicism amounts to. The pure English and American gypsies do not profess a religion, tho I have known of one or two of the higher class attending services of the Church of England when 'across the water.' One Romany told me that he did not deny the existence of God, or that Christ (to the gypsies usually indefinitely known as the 'Tickno Duvei' or 'Small God') was the Son of God. A gypsy will do many things for expediency, and churchgoing may sometimes be among the number, for tradition and training do not incline the Romany churchward; but one will find always, tho perhaps but half acknowledged, the recognition among them of the Boro Duvel. the 'Great God,' and of the 'Small God,' 'His Son,'

"Strange ivory or coral charms, fashioned like miniature horns, are often worn to avert the influence of the devil. The most beautiful gypsy girl I ever saw wore a marvelous string of large, exquisite pieces of deep pink coral horns as a necklace. There are many curious charms and superstitions among Romanys, part of which they practise or profess when dealing with the gullible Gorgio. At such times they would deny wholesale or assert their own belief in them, just as seemed the more politic. so that it is really difficult with the majority of gypsies to get at the truth of their degree of faith in these matters; professing and yet scoffing at them, they guard their real feelings and ideas jealously and sacredly,"

### RELIGIOUS ACTIVITIES IN THE COLLEGES.

A N investigation has been made by the public relations committee of the Hartford Theological Seminary into the religious conditious existing in American colleges. Some sixty-six colleges reported, and many interesting facts were collected. We quote the following information from a summary of the report in The United Presbyterian (Pittsburg) :

Of the 2,317 men in the senior classes of the various institutions 1,675-or about 74 per cent,-are professing Christians, and 294 are candidates for the ministry-a gain of 1.7 per cent. over last year. The Young Men's Christian Association gives evidence of remarkable vitality in almost all the colleges. The special report of the Harvard Y. M. C. A. shows the variety of religious work of the Christian Association within the university. There are five courses in devotional Bible study, with 115 members enrolled, 5,000 daily Bible readings sent to all members of the university and many alumni, a small but well-selected reference library on Bible study and missions, 12 men studying foreign missions. The Harvard Y. M. C. A. manages a social readingroom on T Wharf, Boston, patronized daily by 160 fishermen; sends 15 men every week to tench English at a Boston Chinese Sabbath-school; sends squads of three or four men Tuesday evenings to assist at the Boston Industrial Home and the Merrimac Street mission. Johns Hopkins University, Baltimore, reports an increase of 331/2 per cent., Lehigh 100 per cent., Indiana University 20 per cent., Wahash 10 per cent., and Cornell University an increase from 18 per cent. to 21 per cent. of the total enrolment of the institutions in Y. M. C. A. work. In Weslevan University and Fisk University, Nashville, Tenn. (founded for colored people and still aided by the American Missionary Association, New York), outside work has taken the form of neighborhood mission work. The University of Vermont carries on city missions, and Haverford College has recently undertaken three missions. There was an advance in religious work more or less marked in 56 institutions.

The Episcopal Recorder (Philadelphia) finds the present conditions of our colleges most encouraging when compared with those existing fifty or a hundred years ago. It comments:

"Our universities and colleges are not the homes of lawlessness and sometimes ruffianism that the unknowing are often led to suppose. The incidents of cruel hazing and lawlessness with which we are now and again regaled in the newspapers do not represent the normal state of college life in our midst. The deeds of the lawless are splendid 'attractions' for a sensational press; but the press is straugely silent about the vast preponderance of truly religious men who are coming to the front in all works of life and who are the products of our higher schools of learning.

# FOREIGN TOPICS.

# EMPEROR WILLIAM'S MISCONCEPTION OF

S OME foreign observers of the results of Prince Henry's trip to the United States are of the opinion that Emperor William may be misled by it. This aspect of a passing international episodo prompts The Spectator (London) to observe:

"There is only one bad point about this reception of Prince Honry in America,—it may deceive the Emperor William. He has evidently been informed by his agents in Washington that the Americans regard his policy with suspicion, and fully realising, since the Spanish war, that America is a 'world-power,' and may place obstacles in the way of some of his plans, he has

PRINCE HENRY'S RETURN

Quick, a doctor! these gentlemen are returning from a pleasure trip to America. -  $\ell^*/k$ .

cast about for means of soothing American opinion. The casiest method of conditation is to appeal to a foible; and the Emperor, we fancy, like almost all continentals, imagines that the special American foible is snobbishness. They love, be is told, to be complimented by the great, they worship rank, and they will postpone even serious interests to secure social recognition. Their millionaires like to marry their daughters to dukes; their mart people are always mitating; their travelers are eager for royal or aristocratic invitations. To send them a prince, a real in the judgment of Berlin, delight them all, and convince them that Germany is, after all, their most reliable friend, the state which will lead to oppose their desire for a world-wide commerce."

But the Emperor will find himself mistaken, declares this authority, "for he has read the American character wrong ":

"They are no doubt a sensitive people, keen to precive and to resent anything which sowros of slight, and greatly pleased whenever they see that the ancient courts acknowledge the nation of which they are so proud as among the greatest of the earth. There are but six first-class Powers in the world, and in the visit of Prince Henry America is acknowledged publicly and with great and honorific ceremony to be one of the six. ... But he snapshots we should like to see would be those of the President and Mr. Hay just before and just after the Prince had made some political request. They would hardly book, if our view of persons. The infinitely courteous hosts will in a moment be hard business men, thinking not of the pleasantest sentences to

say, but of the permanent interests of the United States. Only the humor might linger a little in the eyes,"

The idea that some unpleasant discoveries regarding the American character will be made in the near future by Emperor William is thus set forth in *The St. James's Gazette* (London):

"What will the editors who entertained the Kaiser's brother be writing when that little question about the possibility of the man colonization in Brazil comes up for discussion? It will not occue up for discussion just yet, perhays, but will Prince Heavi visit affect American opinion ou that particular point? We imagine it will not. But the Kaiser, we take it, thinks it will."

Such a view of the case does not seem to commend itself to the Temps (Paris), which even inclines to the opinion that the Americans may be too much impressed by Prince Henry's coursey. It calls attention editorially to the participation of the daughter of the President of the United States in the proceedings:

"Some chaggined spirits are decidedly of opinion that a young person of whom the Constitution of the United States knows nothing is being singularly pushed forward. As for the great public, it is delighted with the Prince's affability and with the good grace of the young girl, who has shown once again that American women are verywhere in litely judge and at their case, even or rather especially in the midst of those grandeurs to even or rather especially in the midst of those grandeurs to Prince Henry of Prusais (normed, for a democracy infatuated with official pomp and particularly sensitive to old Europe's distinctions of rank, an agreeable relaxation from political cares."

It has not occurred to the German press, apparently, that Emperor William may misunderstand this country. Such papers as the Kreuz Zeitung (Berlin) actually congratulate bim upon his insight into things American.—Translation made for The Lat-REMAY Dioses.

### KITCHENER'S MILITARY VALUE.

E NGLISH estimates of Lord Kitchener's capacity are high, notwithstanding continental Europe's depreciation of his work as leader of the British campaign in South Africa. The following is from The Standard (London):

"Small parties have got through here and there, and De Wet is still at large. But it must be remembered that all the experience of past wars goes to show how extremely difficult it is to construct lines which a resolute enemy can mot cut somewhere. Napier has binted his doubts whether even Wellington's famous entrenchments at Torres Vedras did not remain unbroken largely because Massean could not make his mind up to attack them. The repeated escapes of De Wet are sufficiently accounted for by his mafalling scent of danger and his weath of resource."

This commentator distinguishes between the excellent results obtained by Kitchener himself and the misfortunes over which he could have no control. The Pilot (London) admits certain drawbacks in the plan of campaign:

"The comparative ease with which the Boers break through wire entanglements, once they nerve themselves to a rusk disappopinting, but yet we willingly recognite once again the fertility of resource these people display in adapting means on ends. Every artifice which familiarity with the classe can suggest is pressed into the service of war, and having first shows to show to use wire they now show us how to destroy it. But the Lord Kitchener has thus to move slowly, yet he moves."

Even papers which are not well disposed toward the war are friendly to Kitchener. Thus *The Daily News* (London) praises his good judgment in more than one emergency:

"Mr. Chamberlain announced last night that Lord Kitchener has alreally accepted the surrender of some minor Boer leaders on the understanding that their liability to banishment under the proclamation should not be enforced. We are not told how may leaders are included in this exemption, and we take the liberty of supposing that they are very few. But it is at least a symptom of a change of mind in the right direction. It is, unhappily, impossible to give the credit of unitative in the matter to his Majessy's Government, for it seems that Lord Kuthener, the as a soliter must have recognised the complete abundity of the position, accepted these surrenders on his own responsibility, —. Perhaps now the Government will pick up some element of statesmanship from the soldier whom they are employing in South Africa.

The comparative failure of the British commander in South Africa must be attributed primarily to lack of good horses, in the opinion of *The St. James's Gazette* (London):

"Nothing will ever remely this defect until we are as superior in horsefesh as we are in men. The parliamentary paper on remonst just issued contains matter which is worth a good deal of study in this connection. Certainly the War Office is very far from being free from biame. They were too slow at first; they were all at sea as to their somerces of supply; they bought the wrong kind of animal; and they failed to look far enough ahead and to provide a sufficient reserve. But we are not disposed to blame them severely for their repeated inquiries to Lord Kitchenra's to when he would be able to reduce his enormous demands the some of th

### THE FOREIGNER ON THE STRENUOUS LIFE.

THE subject of the strenuous life, as lived and urged by Theodore Roosevelt, is now attracting English attention. In a conspicuous leading editorial The Westminster Gazette says:

"Mr. Theodore Roosevelt is a remarkable example of a man who has reached the highest place without losing any of his youthful enthusiasms. He has seen the worst side of politics. he has had to submit to the innumerable compromises and acceptances of the second-best by which a practical man struggling among conflicting interests contrives to get things done, he has seen the ebh and flow of public opinion, and he still emerges with a high opinion of his fellow men and with an immense belief in the power of zeal and energy to influence the future. There is a good deal in his teaching which might alarm quiet people. He is very pushful, he has no belief that wars will cease, he is an expansionist, an imperialist, with a great belief in his flag and the destiny of his people. But on the other side he brings the same fervent feelings to bear on domestic reform in the United States, and he manages to combine with them a code of practical wisdom in regard to political organizations and party politics which might have been framed for our use as well as for the use of Americans."

"Such a man has his dangerous side, especially in America," thinks The Speaker (London):

"For Mr. Roosevelt in his ardent expansiveness, his dogmatic impatience, and the violent aggressiveness of his militarism represents in all its nakedness the extreme type of the reaction against many of the soundest and most genninely conservative tendencies of American policy and character. . . . He is not satisfied to be upright and to do manly things. He must talk of his uprightness and of his manliness, so that his fellow men may hear and applaud. His formulæ are simple and primitive. He wishes the American boy to have 'character,' but he fails to tell him how to attain it, or, indeed, what it really means. He inculcates courage and honesty on Americans in general, but he is, as we have seen, the strenuous eulogist of war against the Filipinos striving for the same right to independence on which American greatness is founded. He is in himself a good man, and his courage is proved : but he has never grasped the essential fact that he who can dare to be in the right with two or three is a braver man than he who wins the applause of the multitude and has his manliness certified by the votes of a majority."

The strenuous life will make Mr. Roosevelt a formidable figure in the Presidential chair, according to Edouard Rod in the Correspondant (Paris):

"He shows us that an enormous force may arise any day in the Union to precipitate itself upon a career of conquest. And when one remembers that this book is the work of the present head of the state, who, owing to the peculiar circumstances of his accession to power, may remain nearly twelve years in office, one feels forcibly that something has changed in the world,"

The net result of a study of Mr. Roosevelt's writings, according to the journal des Désait (Paris), is that the American have a President upon whom they may congratulate themselves without reserve and who will probably give them uneasiness only on the score of his imperialist ambitions.—Translations made for The LTMEAN DESS.

# CHAMBERLAIN AS ENGLAND'S NEXT PREMIER.

CONTINENTAL newspapers affect to look upon Lord Rosebery as England's coming premier, but there is a tendency in the English press to regard Joseph Chamberlain as the inevtable head of the next government. An anonymous writer in The National Review (London), after dwelling upon Mr. Chamberlain's oualities, declares:

"It is, however, because he is the most progressive and youthful-minded of our statesmen that he is worthiest to lead the nation. The advancing in years, he is not, like many of his col-

THE SLEEPING KING.

LORD SALISBURY: "What a joke if I wake up and don't resign!"

— Westminiter Gasette (London).

leagues, tied to the traditions and shibboleths of the remote past, He is emphatically open-minded, and opportunist in the best sense, which means that he does not start with a priori rules, but is ready to adapt the rules to the occasion. . . . Above all things he is alive to the importance of the imperial movement, and to the trend of colonial sentiment. He has understood more clearly than the older type of Liberals that in these days, when the doctrines of statesmen on the Continent are based upon the ideas of Hegel and Nietzsche, England can no longer, without running the risk of national annihilation, cling to her old sentimental aims. In a world where force is once more tending to become the arhiter, she must have force on her side and be not unprepared to use it. Isolated in Europe and without allies there whom she can trust, she must consolidate the bonds of sentiment which hold together the diverse units of her empire. To be supported to the hitter end by her great autonomous colonies. she must show them that she, too, in the hour of need will stand by them and make sacrifices for them,

The same writer has no patience with the support given to Rosebery for the premiership;

"England has to make in this hour a choice as fateful as the choice of Er in that hast daziling passage of Plato's Republic. Sile has to choose between a man, on the one hand, whom family influence purst forward, but whom the nation knows in its heart to be until for that position of stress and effort which must be the lot of the statesman controlling its high destines in the era of conflict before it, and one who has shown that earnest strenuousness, that devolo to a great purpose, that tenacity, and yet withal that adaptability to the new, which are the very characteristics required."

"Mr. Chamberlain and no other ought to be Prime Minister," writes Calchas in The Forting htly Review (London):

There is one contingency which has never been sufficiently

considered. Prime ministers have been foreign secretaries and chancellors of the Exchequer. Except for temporary periods of emergency, such doubling of responsibility is not defensible. But we are in one of the periods of temporary emergency. It will not disappear with war, but only with the subsequent efforts to deal with the questions that have grown out of the war. Why, therefore, should not Mr. Chamberlain be Prime Minister without easing to be Colonial Secretary? If he were, nothing could seem more characteristic of the new age of politics, and it would without Mr. Chamberlain is more than are all other statesmen put together—second to nothing which has been done even in these last creative years."

"Mr. Chamberlain has, we think, reached the meridian of his career," says The Saturday Review (London):

"It is possible that if the Conservatives are again returned to office at the next general election, Mr. Chamberlain may be Prime Minister. But Mr. Chamberlain will then be verging upon his seveniteth year, and, though he is extraordinarily young for his age, it is not in the course of nature that he should surpass, or even equal, his present achievements. At this moment Mr. Chamberlain is not only the most popular man in England: he is the most powerful stateman in Europe. The Ascination, half fearful, half friendly, which his name exercises over the average foreigner is almost incredible. A serious man of business from corejare is almost incredible. A serious man of business from your proposed of the contract of the company of the contract of the company of the contract of the contract

The view which prevails on the continent of Europe is in no way consistent with Mr. Chamberlain's availability as Premier. It would be easy to quote many opinions, but that of the Indipendance Belge (Brussels) can stand for the majority:

"For the imperialists the ideal Premier would be Mr. Chamberlain himself; but he is known to have made himself impossible by his stupid attacks on France, to begin with, and finally his imprudent reminders of the excesses committed in 1870 by the German soldiers. England's position abroad would be still further weakened by conding Great Britain's general policy to the guidance of Cecil Rhodes's friend."—Translation made for Tut LITERANY DIASTS.

### EUROPE ON OUR PHILIPPINE WAR.

THE struggle carried on by the United States in the Philippines has been overshadowed in Europe by the Boer war. Hence foreign comment is less plentiful than it might otherwise be. Papers which denounce England is attitude toward the Boers likewise condemn the United States for its course in the Pacific archipelago. English papers reveal this tendency in a marked degree. For instance, The Juliy News (London), known as "pro-Boer" on account of its criticism of the British South African policy, says:

"The inevitable consequences of a war against freedom have come out in the Philippines as they are coming out in South Africa. The obstinacy of the resistance in such a cause can not be overcome by the usual methods of warfare; if it can be overcome at all, it is only for a time, and by the employment of uncivilized means. Such warfare must sooner or later degenerate. The question is, How long will the public conscience remain torpid? In the United States there are signs of a return to health. and there is a prospect of the abandonment of an enterprise against which the true political nature of America revolts. 'The American people,' said Mr. Schurman, in a recent speech, 'will never argue a free people into subjection.' When the traditions of the nation are reinforced by a thorough understanding of the cost and the hopelessness of maintaining what we know too well as 'a sort of warfare,' it may be confidently hoped that a people as practical as they are liberty-loving will listen to the voice of reason and of honor.

The same paper publishes a column of detail concerning the

"water-cure" torture and other wrongs inflicted upon the Filipinos by Americans, as well as an account "of the way in which these facts are acting upon public opinion in the United States." It thus comments:

"Imperialism is losing what hold it had upon the American imagination: it was, indeed, incredible from the first that a nation so steeped in the traditions of republican freedom, whose proudest memory is that of a long and deadly struggle against despotism, could long be led astray by the preachers of racedominance and military tyranny. The Democrats of the United States are gathering their forces together in opposition to the oppression of the Philippine people, and it is not surprising to hear that the supporters of the Administration themselves are divided on the question. For there are stories being told about the conduct of the war which might give pause to the most fanatical advocates of ascendancy. It has proved impossible to muzzle and to blind the free press of America, and three features of the recent campaigning in the Philippines are freely discussed and denounced, namely: reconcentration, the shooting of those 'aiding and comforting' the so-called rebels, and the use of torture in order to obtain information from prisoners. We should certainly scruple to allude to this last accusation, if it had not been made by respectable journals, and admitted and defended in the Manila Actes."

Another side of the picture is seen in such comments as that of The National Review (London), in its review of American affairs from the pen of A. Maurice Low:

"Much has been said of the brutality of the concentration policy in the Philippines, just as in the same way Lord Kitchener has been so savagely abused for the establishment of concentration camps in South Africa; but when the facts are sifted the charges can not be sustained, and to compare the British or American methods with those of Weyler in Cuba is either dishonesty or ignorance. Stephen Bonsal, the well-known correspondent and author, who has recently returned from a long tour of observation in the islands, shatters this abuse of the concentration system. Major Frederick Smith, who was in command of the island of Marinduque, found, what British commanding officers have found in South Africa, that his enemy would run but not fight, that he could not be caught with the small number of American troops available, and 'that every village and every ranch in the island was a commissary store and supply station for the furtive insurgent bands.' Of course, the natives protested their loyalty, and claimed that their supplies were levied on by force. Major Smith concentrated the inhabitants and supported them and then took the field, destroying growing crops and even digging up nutritious roots. In ten weeks the desired result was achieved, all the insurgents threw up the sponge and surrendered, and the concentration camps were dissolved.

"A parallel to the South African war," the situation is termed by the English tactical expert, H. W. Wilson, in an article in The Fortnightly Review (London), printed last Jinuary. At that time he said:

"The parallelism between the South African and the Philippine war is then close, and extends even to the management at home in either case. That the same faults should have been committed in either instance is almost startling, and points, perhaps, to the fact that ignorance of war in the administration at home, which is the essential feature of similarity in the American and British constitutions, may be the cause. It is most dangerous to entrust the conduct of a war to men who know little of military history, for foresight is simply the power of predicting the future which arises from a profound knowledge of the past. In both instances we see insufficient forces employed, and hampered by the order to be 'kind' to the enemy; troops withdrawn when they were most needed; generals asserting in perfect faith that the conflict is over; conciliation essayed with grotesquely futile results; and insufficient arrangements made for the steady and continual flow of reinforcements to the field. In each case an Anglo-Saxon people fails clearly to grasp the problem before it, or to understand that in a war of conquest what is needed is to break down the opposed will by the infliction of suffering."

More recent opinion in Europe confirms this view. A typical

Coatiaental criticism is this from the Independance Belge (Brussels):

"The Philippines were, in fact, conquered by the Americans and the Americans intend to keep their conquest. As for Mr. Long's promise that in a very distant future when the Filipinos are ripe for self-government they will be left masters of their own destiny, that is a pleasantry. It is not with any such promise as that that the rebels will be induced to lay down their arms. Before the Spanish-American war the United States promised the Philippines not autonomy merely, but absolute independence. It was only upon this promise that Aguinaldo and his troops supported the Americans in the war against Spain-that they brought invaluable aid without which, no doubt, the archipelago would not have fallen into their hands. Before the war the Washington Government thought the Filipinos ripe for independence. After the war, after the conquest, this same Washington Government thinks these same Filipinos would not know how to make a practical use of administrative autonomy. The meaning of this attitude is manifest. Its injustice cries aloud. But let there be no misunderstanding. The pacification of the archipelago will force the United States to make enormous sacrifices of men and money, the more so as the absolutely barbarous conduct of certain American officers in dealing with the rebelsconduct attested by official witnesses-will only appravate resistance. The Americans have gone even to the length of reestablishing in the prisons of Manila instruments of torture which the Spaniards themselves had abolished. To throw off the Spanish yoke the Filipinos had struggled for years. Hence they will struggle for years to throw off the still harsher yoke of the Americans."-Translation made for THE LITERARY DIGEST.

# THE SPANISH KING'S FITNESS TO RULE.

THE recent statements that the young King of Spain may not be deemed fit to tule the country when he comes of age in May are gnardedly alinded to in the Spanish press, which discredits them. The Correa (Madrid), organ of the cabinet, allose to "the possible creation of a sort of privy council," composed of the Cardinal-Archbishop of Toledo and other dignitaries. The Liberal (Madrid) and other progressive papers condemn anything of the sort. Papers outside of Spain comment in the one of the following from the Independence Enlege (Brussels):

"The reactionary Clerical element would thus be absolutely dominant, and this privy connoil would after all serve only to paralyze the representative government of the parliamentary majority, which is charged with expression of the national will. It would be a step backward, a return to a government incompatible with the aspirations of a modern nation. It would be scandalous for a misistry calling itself Liberal to permit such a proceeding."

The numeroas articles on the personality of Alfonso XIII., with which the European press is filled, have said nothing definite regarding his health. According to some accounts it is good, while others say it is bad. The Pester-Lloyd lately summed this matter up thus:

"He who is the object of all the preparations continues his studies peacefully and uses his sisture to hant in the neighboring wood in company with his brother-in-law, the Prince of Asturias, an occupation in which he much delights. Hence it is thought that hereafter he will spead his summer, boildays between San Schaatian and La Granja, where there is good hunting in the wooded mountain region of Kio Prio. He has grown the 'hitle' King. It is to be hoped that this rapid growth has not injured his health, which, as the posthumous son of a consumptive, he has not too much of. But everything possible has been done for it by means of exercise. At any rate the anxieties expressed heretofore on the subject have not been warranted. Its appetite is good, his health sound, and the enemies of the were in question."

Young as the King is, he has begun to receive advice or its equivalent. The Standard (London) remarking:

"Alfonso XIII, has a difficult task before him, but it is not an impossible one. He can make his crown almost as secure as our own if he follows in the footsteps of his mother. He must abstain from any insane attempt to restore the absolute rule of the eighteenth century, and above all he must not fall back on the intolerable practise of former Bourboa kings who allowed them.

selves to be influenced by palace cliques of courtlers, friars, sycophants, and buffoons."—Iranslations made for The LITERARY DIGEST.

# THE FRENCH PREMIER'S CHANCES IN THE

Waldeck-Roussaux, the French Premier, resutting in painful injuries through the collision of his carriage with a street-ear, has not impeded the progress of the political campaign in France. In fact, the struggle is growing warmer and warmer, and the sympathics of various newspapers seem to affect their estimates of the result. The formal destant (Paris) begins to be doubtful of Waldeck-Rousseau's

"The voters will soon show what they think of it all. In spite of every subtley, it will be impossible to persuade them that the Waldeck-Rousseau cabinet embodies the established order and that it is conspiring against the republe to imagine that it ean be governed by another minister, equally republican. . . . Instant of congratuating himself upon the progress of the principal control of the

It is a great pity that the accident did not prove serious enough to keep the Premier in bed until after the elections, says the Intransificant (Paris), Henri Rochefort's revolutionary daily. The Waldeck-Rousseau campaign is simply a combined effort of Socialists and Radicals to overwhelm the genuine Republicans, according to the Kripholipus (Paris), organ of the ex-Premier Bernet, and it prophesies atong those lines. A paper outside the property of the Company of the Paris (Paris), organ of the ex-Premier Bernet, and it prophesies atong those lines. A paper outside will win:

"No wonder the ministry faces the electoral struggle in calmonidence and believes the people will confide their interests to the proper hands, to the old and tried leaders again. In the new French parliments will be found a decisive majority for the defense of the republic, for the maintenance of order, justice, and right, for the preservation of equality and fraternity.

The "great qualities" of the French Premier receive a tribute

"One only remains calm in the midst of all this storm and stress, and that is Waldeck-Rousseau. He looks forward with confidence to the coming battle. Strong and true is the support be has won for himself is the land and among the people. His stress, and the support of the property of

# NOTABLE BOOKS OF THE DAY.

### A SATIRE OF MUSIC.

MELOMANIACS. By James Huneker. Cloth, 5 x 75 inches, 350 pp. Price, \$1.50. Charles Scribner's Sons, New York

WE have seen this book, by the well-known author of "Chopin," and of "Mezzotints in Modern Music," widely heralded; we have waited for it with interest, and read it with disappoint-Its publishers announce it " as a collection of fantastic and ironic tales, in which the sentimental and conventional notions of music and

DAMES BUTSERSON

us a collection of extremely pointless tales, hardly worth the reading. " The heroes of modern culture, Wagner, Ibsen, Chopin, Schopenhauer, Nietzsche, and Richard Strauss, are handled without reverence. The book is a satire upon the symbolist movement and artistic and literary Bohemia, the seamy side of which is mercllessly set forth." We found the attempt extremely lame. The author tells us of "the power-the Insidious, subtle, dangerous powerthat lurks in great art"; his way of satirizing it is the portraying of various half-mad, fantastie, and poverty-stricken creatures addicted to drinking, long hair, and music.

We have read, dutifully, nearly all of the twenty-four stories in the book, and found only two or three of interest. There is one really striking tale-"The Piper of Dreams"which we confess we should have read, up to the last page or two. without knowing that it was satiric and Ironic, unless we had been forewarned by the publisher. "The Piper of Dreams" is a story of a half-mad mystic, a Russian musician, who probes the secrets of the East, who finds a new utterance for music, and drives mad the souls of men, overturning empires; it seems to us, instead of a satire, a startling piece of imagination, vividly described. It all depends, of course, upon the point of view; just as there is no doubt that Shylock was to Shakespeare and his audiences a comic part. It would not be possible to write a description of highly emotional music that could not be taken

for burlesque by a person so minded.
"Melomaniacs" is the work of a musical critic who has heard too much music.

# A VOLUME OF DELIGHTFUL HUMOR.

POLICEMAN PLYNN. By Elliott Plower. Cloth, 5 x 21/2 inches, s94 pp. Price, \$1.50. The Century Co., New York.

HERE is a volume of character sketches, unique, delightful, and pally there is humor of the most human sort; and despite the homeliness and even vulgarity of the superficial setting, the quality of the humor is of a rare and refined variety. Policeman Barney Flynn is a "character," and a character whom you want to know. We have read

many sketches of dialect humorists, but this is one of the very few of which we can say that there is not the faintest trace about it of anything exaggerated or far-fetched, cheap or smart or showy. Policeman Flynn has many adventures, but they are none of them told in the cheap way of sensationalism; we have counted only three or four false notes in a volume of twentysix sketches.

Flynn is an Irish gentleman with a dialect of his own, and with a philosophy. He has his own way of doing things, and he has many resources; also he has keen humor and sense, real kindliness and honesty. When they make him a sergeant he pleads to be "ray-dooced to th' ranks":
"'Tis too easy bein' a sergeant," he

says, "an' I don't sleep nights fer, thinkin' iv dhrawin' me pa-ay with-out wor-rkin' f'r it." He has also a notable wife, of whom he says: "F'r a woman, she do be th' gr-reatest ma-an I iver see."

Policeman Flynn arrests an automobile, and has an experience "running it in." Also he has difficulties as the mayor's policeman, keeping out the wrong people from the office. Also he is troubled by a judge who declines to send up some thieves, until they are brought in " with

FILLOTT STOWER

the goods on them"; finally he catches one staggering under a load of andirons, and he keeps the goods "on him" till court time the next morning. He is much troubled by technicalities, and says: "If ivir I had th' ma-akin' iv th' law, I'd ha-ave first iv all in th' big book a sintence r-readin' like this: 'Th' la-aws herein mane what they mane, an' not what they sa-ay.'" Once upon a time, also, Policeman Flynn, allalone,

raided a "fince"; and he came home looking battered.
"I got thim," he announced briefly.

"Ye luk it," replied Mrs. Flynn, surveying him critically, "I surpr-rised thim."

" If ye lukked like ye do now ye'd surpr-rise anny wan."

And then he narrates how he slid down a coal chute and landed among the thieves. But "samples" are never satisfactory; and Policeman Flynn is a book not to sample but to read.

# THE MILITARY HERO AS CROSBY SEES HIM.

CAPTAIN JINKS, HERO. By Ernest Crosby, Cloth, 5x73 inches, 393 pp. Price, \$1.50. Fuok & Wagnalls Co., New York,

"HERE exists an ancient critical work in which Othello is interpreted as a moral play, written to prove that young and beautiful ladies should not marry blackamoors. "Captain links. Hero," might in the same way be defined as a treatise on the danger of giving toy-soldiers to small boys. It tells the history of an innocent farm lad who contracts the disease of battle from that source, who becomes a famous soldier in the "Cubapines," and has many adventures and mishaps

The story is a vigorous and varied protest against militarism in America, and belongs in a class with the "Biglow Papers." It is a satire that nearly always interests, and once in a while startles. "Captain Jinks's" life is a "take-off" on "the pomp and circumstance of war" in all its aspects—a subject which lends itself readily to ridicule.

elsewhere, but there is quite enough for Mr. Crosby, who is of the opinion that "there is nothing in the world more comical than a soldier." He begins with a very effective protest against West Point and its hazing; we are told that hazing has now been done away with, but those who know West Point koow that It is inst as much a school of conceit as it ever was, and a fair mark for a satirist. Afterward, "Captain Jinks," now a war-mad enthusiast, meets with experiences that deal mercilessly with the" yellow journals." with army contracts and pensions and other abuses with which we are familiar, with the campaign in Cuba, with the situation in Manila and the whole Philippine

There is less of it in our country than

ERNEST H. CROSBY

question, with the siege of Peking, with Rudyard Kipling, with the Emperor of Germany, with goosey girls and the kissing exploits of Hobson. Much of the satire is effective; some of it, on the contrary, is too long drawn ont, and some of it rather obvious and bald. On the whole, however, the book is a vigorous presentation of a certain point of view-the point of view of those to whom war is an evil, however regarded, and militarism a national peril. In our opinion Mr. Crosby weakens his case by too great a strain, at times, upon reality, as, for in stance, when he confuses the behavior and purposes of the American army and government in China with the reported brutality of the Germans and Russians. "Captain links, Hero," will, however, be a keen delight to the hearts of all anti-imperialists, and an enjoyment to all who can appreciate a clever joust worthily maintained.

### A MONUMENTAL WORK OF HISTORY.

THE HISTORY OF THE WORLD: A SURVEY OF MAN'S RECORD. Edited by Dr. H. F. Helmolt; with an Introductory Essay by Right Ilon. James Bryce, D.C.L., LL.D. Volume I. Cloth, 699 pp. Price \$4, Dodd, Mead & Co. New York.

HE vast scope of this work is justified by its eminent author on the ground that the time for a more generalized type of history has arrived. It is acknowledged that the specialists have long and well prepared for the conception of a universal history, to the final making of which this work claims only a ploneer place. There are some thirty collaborators, presumably chosen because they represent the independent historical ability of Germany, and including several whose names are evidently Slavic and Scandinavian. It would be impossible to corral such an eminent group of authors within the limits of a unitary subjective philosophy of history; and so at whatever point one comes to this work he is at the risk of finding varying conceptions of the final significance of facts and relations. It is thought best to

follow the geographical and ethnic arrangement, which at once suggests to the reader some attempt similar to that which Buckle began, to explain the human career by geographical environment. There is less of this, the fluman career of google-based the general conclusion of the emi-nent author has been that a philosophy of history ought to fellow rather than precede the presentation of the ethnic and geographical facts.

According to the method chosen, this, the first of the eight volumes projected, presents a very general account of the prehistoric, the American, and the Pacific races. The treatment of the paleontology of America, the history of the Central American pre-Colombian civilizations, and the account of the South American development, are more satisfactory by far than the abridged history of the United States. Not to enter upon any criticism of this latter, which our space forbids, It should be explained that the choice of America as a starting-point is made on scientific grounds, tho the author does not accept the theory of the superior antiquity of the American paleontological remains.

Professor Helmolt's work will find a place in the library of every wellequipped student, by reason of being an effort extremely painstaking, and on the whole successful, at the making of a universal history on modern scientific principles. For this there have been the German patience and acumen in gathering and assorting the facts. Such a history will have a high place as a possible court of final resort, or at

least of constantly convenient reference.

The volume before us has a luminous and lengthy essay by James Bryce, that to many American readers familiar with bis "American Commonwealth" will be found the most interesting featureof the work.

### THINGS IN THE YEAR 2000.

ANTICIPATIONS OF THE REACTION OF MECHANICAL AND SCIENTIFIC PROGRESS UPON HUMAN LIFE AND THOUGHT. By H. G. Wells. Cloth, octavo, 343 pp. Harper & Brothers, New York,

"IIIS book, by a successful writer of scientific text-books and of semi-scientific novels, is less technical than its title. An ordinary reader can understand it. To use the author's words, it is a "surmise of a developing new republic-a republic that must ultimately become a world-state of capable, rational men, developing amid the fading contours and colors of our existing nations and institutions." The leading topics considered are locomotion, cities, democracy, war, languages, faith, morals, and humanity. We are supposed to be gaining an idea of conditions at the end of the twentieth century-the year

Locomotion will be facilitated by absolutely smooth highways. Trains and tracks will relapse into disuse, or linger as relics. Passenger vehicles will be as wide as comfort demands. Everything will be exceedingly clean-no horses, no filth, no steam, very little noise. The rate of speed is not exactly indicated, but It will be greater than we now know anything about. Out of these conditions will be "diffused" the great city. The whole country from Washington to Albany will be practically a single metropolis. New York City will contain 40,000,000 population, spread over, say, 31,000 square miles of territory. Neighborhoods will not be so densely built up. Telephones and mail chutes will make shopping simple. But we cannot dwell upon this. Perhaps,

too, our compression of the author's ldeas may make us inaccurate, or cause us to misrepresent him. We hope not. Mr. Wells's book is so astonishing a performance, so rich, so vivid, and so interesting that we are anxious to convey a correct impression of lt.

The people of this comparatively near future fall into four classes. First of all will be the rich, doing no work and enjoying everything. They will have nothing to do with the world's serious affairs. "The help-less, superseded poor" will be at the bottom. Machinery will have made mere toilers superfluous. Hence "the poor" must depend upon a class of

H. 6. WELLS. philantiropists who will survive as anachronisms. Between these rich and poor will be a mass of "capable people." They are elaborately studied by Mr. Wells, who thinks highly of them. Finally, there will be the individuals-a large class-"living in and by the social confusion.

Marriage will assume a new phase-" relax" is the word used by Mr. Wells. We resist the temptation to linger over the social and domestic life he anticipates, with its homes without servants and its families without monogamy, and come to the subject of war. This will be waged to a great extent up in the air. However, there are to be remarkable military doings on the earth, too, none of your small potatoes like Waterloo and Gettysburg, but real science. The rifle will have "growed out of knowledge," like Peggotty's brother. It will have "cross-thread telescopic sights" and may be "used with assurance" at a mile's distance. We do not remember anything in De Ouincey so moving, so throbbing, as the conception of an obsolete army of to-day facing this army of the future. Mr. Wells brings it all before us more vividly than reality itself, for no spectator can take in all of any reality. We see the "gentlemanly old general," and the major, and the subaltern and the raw recruits file past in the majesty of doom.

Our earnest wish to touch upon the faith, the morals, the political Our carriess who is to older upon the lattit, the morals, the posterior lideas of this coming age is friestrated by lack of space. But we must note before taking leave of the book, that its chief value is in its out. Despite the property of the property

### MRS. WHARTON'S TALE OF ITALY.

THE VALLEY OF DECISION. By Edith Wharton. Cloth, 2 vols, 5x7% inches. 314 pp. each. Price, \$2.00. Charles Scribner's Sons, New York

M RS. WHARTON'S latest and longest story is not one to be dismissed with a brief off-hand verdict. The charm of a fine and finished style permeates every sentence, while its character portrayals are marked with those delicate distinctions and nicely shifted shadings which delight the discriminating reader, and whose charm even the average reader can

not wholly escape.

The earnestness with which the author steeps her own intelligence in the temperamental consciousness of a great race-a race whose own intelligence is snbmerged, as it were, in the traditions of its great past -is worthy of all praise. The vivified quality of each individual around whom the incidents of the story play is hardly more alive than is the national Italian feeling en masse.

The threads of the story are so many that the weaving of them into form would confuse any but a strongly constructive hand. We make the acquaintance of the hero, Odo Valsecca at the age of nine years and follow his career till it closes, not in death, but

in a retirement which seems to foreshadow his reappearance at some future day. We first meet him as the dreamy, neglected charge of his peasant foster-mother, scolded, ill-treated, and in rags-a condition then common to many a child on the cadet side of noble Italian houses whose parents could barely afford to keep themselves presentable at court. We see the lonely boy in the village chapel of Contesorda seeking consolation from the picture of St. Francis Assisi. "whose sunken, ravaged countenance, lit by an ecstasy of suffering, seemed not so much to reflect the suffering of the Christ at whose feet he knelt, as the pain of all downtrodden folk on earth.

From this condition Odo is rescued through the death of his father. brother to the reigning Duke of Pianura, between whom and Odo as heir there now stand but one sickly child. Henceforth we follow the boy through the home dramas of two noble houses; through the vicissitudes which place him as a youth among nobles, prelates, men of science, and the friend of the poet Alfieri, until we witness his reign as Duke of Pianura. We see depleted his true love for the daughter of a man of science, whom rank forbids him to marry; his compuisory marriage to the young widow of his uncle; his growth in liberalism and his

riage to the young widow of his nucle; his growth in liberalism and his grant of privileges to a people who refuse to grant part them. "The Old Order" shows as tally of the latter had of the eighteenth century. "The New Light" depicts the mental awakening growing out of the teachings of Kousseau in France. Next comes "The Choice," which teachings of Kousseau in France. Next comes "The Choice," which teachings of Kousseau in France. Next comes "The Choice," which teachings of Kousseau in France. Next comes "The Choice," which teachings of Kousseau in France. Next comes "The Choice," which when the Ireach Revolution an accomplished fact, and bearing fruit in Italy, with Olds under the complete hilusene of the woman he could not with Odo under the complete influence of the woman he could not marry, and surrounded by priests and people who regard all change as

Affacient dentatin of the author is to make clear the marked difference, mential and temperamental, between the French and Italian periods, and also the difference in their respective priesthoad. "France owed memory of the property of the common clearly were with the people. In Italy all save the savants were unquestionable of the property of the p One evident aim of the author is to make clear the marked difference,

# A Noteworthy Publication

# AFTER TWO YEARS OF CONTINUOUS LABOR THE GRANDEST WORK OF ITS KIND, AND THE ONLY COMPLETE ONE, IS TO BE ISSUED

THE DEPEW LIBRARY OF ORATORY, with an editorial staff headed by Chauncey M. Depew as editor-in-chief, have indeed presented to the world fifteen of the most interesting and valuable volumes imaginable.

Herein one finds all of the choice eloquence of the world, from the earliest known oration

to the late President William McKinley's last speech at Buffalo,

U. S. SENATOR CHAUNCEY M. DEPEW

One can hardly imagine the delight and information that this complete library of the world's oratory affords the reader.

Just imagine, here is a set of books which contains not one dull page, a set of books that portrays all of the important events in the world's history.

For example, what could be more instructive or entertaining than the stirring words of the old Romans, Cæsar, Cicero, Demosthenes or Cato.

The British empire's history-making times are described by John Cotton, John Pyn, Lord Chesterfield, Lord Chatham, Oliver Cromwell and Pitt. The Adamses, Hancock, Warren, Jeferson, Lincoln, Douglas, Henry and Webster, represent our own country.

The terrible ordeals of the French people pictured by Marat, Danton, Napoleon, Guizot, Robespierre, are indeed stirring.

In fact there is not an important event that is not recorded in most eloquent words by the grandest orators the world ever knew.

It would be hard indeed to find more interesting reading than Cæsar's speeches in the Roman senate, Samuel

Adams on American Independence, John Adams on the Boston massacre, Patrick Henry, "Give me liberty or give me death," Marat's speech before the national convention, Robespierre's grand speech against granting the king a trial, Danton's "To dare, to dare again; always to dare," Napoleon's address to his army including his pathetic farewell to the Old Guard, and Daniel Webster's oration on the murder of Captain Joseph White.

The first edition of this remarkable contribution to the book world has been quickly subscribed for, in fact but about one hundred sets are now available. This is not to be wondered at since the first editions printed from new plates are of exceptional clearness and beauty.

Another reason why this edition is being so quickly claimed is the fact that an extremely modest price is being asked in order to distribute a limited number of Depew's grand work and thus acquaint the people with the meritorious contents of the volumes.

All interested should write at once to E. L. Parks, Treasurer, 36 East Twenty-second street, New York, for full particulars of the work, special price and easy terms of payment which are being offered upon the few remaining copies of the first edition.

# CURRENT POETRY. If I Were King.

François Villon, "scholar, poet, drinker, sworder, drabber, blabber, good at pen," is the central figure of Justin Huntley McCarthy's drama, "If I Were King," which Mr. B. H. Sothern has been presenting this year. The play has recently been published in novelized form, and from it we quote a few Villon lyrics, which Mr. McCarthy has used in his work

The play receives its name from the following : If I were king-ab love, if I were king! What tributary pations would I bring To stoop before your scepter and to awear Allegiance to your lips and eyes and bair. Beneath your feet what treasures I would fling :-The stars should be your pearls upon a string. The world a ruby for your finger ring, And you should have the aun and moon to wea

Let these wild dreams and wilder words take wing. Deep in the woods I hear a shepherd sing

imple ballad to a sylvan air, Of love that ever finds your face more fair. I could not give you any godlier thing If I were king.

If I were king.

Unconscious that he is speaking to Louis XI, Vilion in one scene relates "how he would carry himself if he wore the King's shoes":

All French folk, whereso'er ve be. Who fove your country, soil, and sand, From Paris to the Breton sea, And back again to Norman strand, Forsonth ye seem a silly band,

Sheep without shepherd, left to chance-Far otherwise our Patheriand if Villon were the King of France?

The figure on the throne you see Is nothing but a popper, pisoned To wear the regai bravery Of silken coat and gilded wand.

Not so we Frenchmen understand The Lord of hon's heart and glance And such a one would take command If Villon were the King of France !

His counselors ere rogues, perdie l While men of honest mind are banned, To creak upon the Gellows Tree, Or squeal in prisons over-mann'd :

We want a chief to bear the brand And bid the damped Burgundians dance: Where the Oriflamme should stand

If Villon were the King of France! Louis the Little, play the Grand; Buffet the foe with sword and innce: 'Tis what would happen, by this hand,

If Villon were the King of France! His lyrical touch is again revealed in the fol-

I wonder in what Isle of Bliss

Apolio's music fills the air in what green valley Artemis For young Endymion spreade the snare : Where Venus lingers debonair : The Wind has bluwn them all away-

And Pan lies piping in his leir-Where are the Gods of Vesterday ? Say where the great Semiramis

Sieeps in a rose-red tumb; and where The precious duet of Carsar is, Or Cicopatra's yellow hair : Where Alexander Do-and-Dare ;

The Wind has blown them all away -And Redbeard of the Iron Chair: Where are the Dreams of Yesterday? Where is the Open of Herod's kiss,

And Phryne in her beauty bare ; By what strange sea does Tomyris With Dido and Cassandra share Divine Proserpina's despair; The Wind has blown them all away-

For what poor shost does Heien care? Where are the Girls of Yesterday.

Alas for lovers | Pair by pair The Wind has blown them all away : The young and ware, the fond and fair : Where are the Saows of Yesterday?

To those who know Francois Villon through Robert Louis Stevenson's cheracterization of him. it is very herd to reconcile the "Sweggerer" with the above tonches of a graceful lyric poet.

# PERSONALS.

Richard Wagner as an Insurgent .- The little Stalour lan near Presiden has recently calchrated its centennial, and a memorial pemperet has been issued, according to the Staats-Zeitung (New York), which contains among other things the following anecdote of Richard Wegner

On the morning of Mey 9, 1649, the hostess of the inn heard distant firing and saw many armed inangents running along the road as if in flight. They were the last remnant of the contingent contributed by Dresden to the memorable May revolution, and the Prussians ware hard upon their heels. The terrified woman was suddenly confronted by a little man with smake-begrimed (see and hande end wearing the insurgent uniform.

breakfast, for I baven't a pfennig about me. And I should like to have a guide to show me the way through the forest to Pretherg,"

She sent ber son to guide him through the wood. Fourteen years ofterward in the enymer of 1863, a well-dressed little gentleman presented lumself at the inn door and said, with a smile: "Good day, Frau Wirthin; I have come to pay my debt. . . . I have not forgutten what you did for ne on that oth of May."

He paid for the breakfast eaten so long before, and said: "Now that is off my conscience, and that you may know whom you trusted so long allow me to introduce myself as Richard Wagner, unce court kapellmeister, then a rebel, now amnestled by the king."- Translation made for Title LICERARY DIREST.

General De la Rey .- The following sketch of General De la Rey is taken from the advance sheets of an important forthcoming book by Michael Davitt, entitled "The Boer Pight for Freedom."

Jacob Hendrick De la Rey, who fought the first successful engagement of the war, first saw tha light in the district of Lichtenburg fifty-four years ago. His father was born in the Orange Free State and was of Huguenot origin. He took part with Pretorius in driving the English out of Bloemfontein in 1848, and had his farm and property confiscated after Sir Harry Smith had reversed the situation by forcing the old Boer warrior back again across the Vani. The De la Reys sought a new home in the west of the Transvani where Jacob Hendrick spent his early life. The report to a man over the mading built amount in build, and remarkable for his quiet, dignified manuer. He has deep-set, dark eyes, a prominent Roman nose, and a large, dark-brown beard, giving to his face a strong, handsome, and patrician

He was born of a fighting family, and has had the experience and training of campuigns in conflices with hostile Kafir tribes. His first command was in the war which the English incited the Bassios to wage against the Pree State in the early sixtles, when he was quite young These experiences qualified him for a prominent mititary position when the present war broke out, and be was unanimously elected to the command of the Lichtenburg burghers who became part of Cronie's western column

He represented his native district in the Volksraad for ten years, and was a consistent supporter of the Joubert, as against the Kruger, folowing in that assembly. He favored a large franchise concession to the Uitlanders as a means of averting a conflict with England, but soon saw that a demand for political reforms was only a pretext for precipitating a conflict. He was one of the most revient advocates of an attacking as

# FRIED ONIONS

# Indirectly Caused the Death of the World's Greatest General.

It is a matter of history that Napoleon was a courmand an mordinate lover of the good tkings of the table, and history further records that his favorite dish was fried onions; his death from cancer of stomach it is, claimed also, was probably caused from his excessive indulgence of this fondness for the odorous vegetable.

The onion is undoubtedly a wholesome article of food, in fact has many medicinal qualities of value, but it would be difficult to find a more indigestible article than fried onlines, and to many people they are simply poison, but the onion does not stand alon in this respect. Any article of food that is not thor oughly digested becomes a source of disease and dis comfort whether it be fried onions or beefsteak.

The reason why any wholesome food is not promptly digested is because the stomach lacks some important element of digestion, some stomachs lack peptone, others are deficient in gastric juice, still others lack hydrochloric acid.

The one tiding necessary to do in any case of poor digestion is to supply those elevents of digestion which the stomach lacks and nothing does this so thoroughly and safsly as Stuart's Dyspepsia Tablets. Dr. Richardson in writing a thesia on treatment of

dyspepsia and indigention, closes his remarks by saying, "for those suffering from acid dyspepsia, shown by sour, watery risings, or for flatulent dyspepsia shown by gas on stomach, causing heart trouble and difficult breathing, as well as for all other forms of stomach trouble, the safest treatment is to take one or two of Stuart's Dyspepsia Tablets after each meal. I advise them because they contain no harmful drugs, but are composed of valuable digestives, which act promptly upon the food eaten. I never which ack promptly upon the food eaten. I never knew a case of indigestion or even chronic dyspepais which Ruart's Tableta would not reach." Cheap cathartic mediclines claiming to cure dys-pepais and indigestion can have no effect whatever in actively digesting the food, and to call any cathartic medicine a cure for indigestion is a mis-

nomer.

Every druggist in the United States and Canada sells Stuart's Dyspessia Tablets, and they are not only the safest and most successful, but the most scientific of any treatment for indigration and stomach troubles.

# A Blind Wanderer

Didn't Know That Food Could Restore Her

A well known writer uses Grape-Nuts as a tonic when feeling the effects of extra heavy work. She writes: "Grape-Nuts should be taken regularly as one would a tonic. I eat mine cold in the morning with hot milk or cream poured over it, and it is delicious, nourishing and strengthening.

"Some time ago I said to a lady friend who was a great sufferer from dyspepsia and has been an invalid for five years, and who was a mere skeleton, 'If I had for he years, and who was a mere skeleton, '11 I had only known you sooner you need not have suffered all these years.' She looked at me in surprise and arked me what I would have done. 'I should have put you on Grape Niss Breaklast Food,' I replied quite confidently.' Did on ever hear of a she had not been as the confident of the property of the p

not thought it applied to her needs.
""Now," I said, "If you will just set about it and
try Grape-Nuts for a week, three times a day, I will guarantee you will rise up and call me blessed

"She took my advice and followed it faithfully. When I saw her about a week later she looked like a different person although she had only gained two pounds in weight, but said she felt so much better and stronger, and has greatly improved in health and strength since using the food.

"She is getting well and you can imagine her delight is unbounded. My own experience and that of others is sufficient evidence of the scientific value of a food that supplies nourishment to the system and builds up the brain and nerve centers." Name given by Postum Co., Battle Creek, Mich.

# TOPICS OF THE DAY.

# RATHBONE, NEELY, AND REEVES SENTENCED.

O regret is expressed in the American newspapers over the fate of the three men who have been found guilty of defrauding the Cuban postal department. Estes G. Rathbone, C. F. W. Neely, and W. H. Reeves are sentenced by the Andiencia court in Havane to ten years' imprisonment each, and to pay fines ranging from \$15,000 to \$56,000. Their cases are to be appealed to the Cuban Supreme Court and application is to be made to the Cuban Government for pardons; but the American papers freely express the hope that no jot of relief will be given them. Rathbone and Neely were men of considerable prominence and political influence, the former being director-general of posts in Cuba, and the latter chief of the

finance division of the Cuban Postoffice Department. The "pickings" of the trio are reckoned at more than \$250,-

They "deserve no consideration now in the hour of their conviction," declares the Washington Star, and the Philadelphia Inquirer says that "there will be no sympathy in this country" for them. So, too, says the Chicago Evening Post : and the Chicago Tribune not only thinks the punishment "none

too severe," but says that "it is to be hoped that the Supreme Court will confirm the verdict without delay and that President Palma will be deaf to pleas for mercy from whatever quarter they may come." "If the island authorities accede to any request of this sort, they will run counter to the wishes of every American who values his country's good name," declares the

Brooklyn Eagle. The Hartford Post. however, recalls that Neely was once an editor, and altho it believes that "he where he belence." it observes sadly that "when editors go wrong, it is hard to tell who can be tractad "

Turning now from the personal consideration of the trio to the political bearings of the conviction, the New York Times declares that "nothing could be more exemplary or

of better augury for the future of Cuba," and the Boston Transcript believes that the conviction "will have a most salutary effect on our relations with Cuba, and ought not to be without beneficent influence on our own politics," "The island court has done itself signal credit and increased general confidence in the stability of the political institutions which the people of Cuba are about to establish," thinks the New York Tribune, and so say the New York Evening Post, the Brooklyn Times, the Providence Journal, and many other papers.

The following paragraphs from the Chicago Record-Herald seem to express the general newspaper sentiment :

"They deserve no sympathy, their crime was of the sort which calls for exemplary punishment. When they went to Cuba, it was to fill positions of exceptional responsibility and trust. The United States was on trial before the world for the administration of a foreign government. It was peculiarly sensitive to the charge of corruption which is often urged against it in foreign countries because of the bad repute of our municipal politics and of the spoils system in our civil service. Therefore every American who was sent to Cuba in an official capacity should have felt inspired to do his very best.

"But Rathbone and Neely in particular went at their business from the first like reckless and shameless frechooters. They lived far beyond their means, and were soon stealing money outright, trafficking in stamps, falsifying accounts, and overcharging in their bills. Neely, who was the greatest rogue of the lot, also let himself boodle contracts. Apparently he deceived himself into believing that the low ideal of the carpet-bagger was to become a fixed ideal of the expansion of the country. He calculated on the continued support of the influential partizans who had secured his appointment, and found it difficult to comprehend his position when he was called on later to answer for

"The case was so bad on every account that the insinuation of Thompson, the ex-postmaster of Havana, that this rascally adventurer and his confederates have not been treated fairly deserves no serious attention. It is a fatuous appeal to national prejudices which can not palliate the conduct of the prisoners or offset the indisputable evidence furnished by such men as Fourth Assistant Postmaster-General Bristow. The Cuban court was sone too severe, but might have incressed its sentence of ten years' imprisonment and heavy fines without hurting American susceptibilities."

### THE THREATENED MINERS' STRIKE.

THE loss of wages that a strike would inflict on the miners, the loss of profits that it would inflict on the operators, and the increased price of coal that it would inflict ou the public lead the newspapers to urge both sides in the controversy to come to reasonable terms. Newspaper sympathy does not seem to be so strongly with the mea as it was two years ago, but at leftst as much is 'manifested for them as for the operators. 'So far as much is 'manifested for them as for the operators.' So far as are in a poor position to refuse a reasonable compromise; the nurrace facts go," says the New York II breft, "the operators are in a poor position to refuse a reasonable compromise; the miners have an apparent moral right to expect concessions, since the last advance of 10 cents a ton to them was made the excuse for exacting from 50 to 75 cents a ton more from the consumer."

The grievances of the miners are set forth as follows in The United Mine Workers' Journal (Iadianapolis):

"The anthracite operators have posted notices stating that they will continue the agreement and pay the prices established on October 20, 1000, un-

WILL IT PULL THEM SAFELY OUT?

- The Philadelphia North American.

operators' agents had lived fairly up to the agreement, that their position would be correct. They must know their position is wrong, or they would not hide behind an impersonal votice and refuse to meet the accredited agents of their employees. The green type and the sesson tangeth by the operators meeting their employees at Indianapolis. Terre Haute, Peoria, Des Moiaes, Columbus, Pittsburg, and Saginaw are lost on them. Like the

thus put the miners in

Bourbon, they are serene in their ignoring the demands of common sense and justice. But be it remembered that there is no Bourboa occupying a throne in Europe at present. The anthracite operators are intoxicated with greed and deaf to the appeals of reason and justice. They add an uncertainty to their proposed agreement by a vague allusion to a sixty-day notice. They unwittingly, perhaps, give the impression that they intend to abrogate that agreement and take snap indgment at an opportune time. They have given hostages to doubt. They have not done the thing in the right way. They make it appear as if they had thrown down the gantlet and issued a challenge to organized labor in that notice. They do not seem to act as if their iateations are pacific, and they adopt means which seem defiant in the extreme. They have made the terms such that an acceptance of them will appear humiliating. They have used the method which will make the efforts of the conservatives seem

FOXY UNCLE,

Uncle Mark: "If I kin jist git these two ter goin' together, I'll give the boys the race of their lives."

—The Minneapolis Journal.

cowardly. The cool-headed, peaceful officials of the miners' anion are placed at a disadvantage, and their efforts jeopardised by that ill-timed and mischievous notice. It is a potent weapon in the hands of the frothy hothead. They have filled the pathway to a peaceful solution with thorns. They did not adopt the methods of men anxious for peace or seeking for justice, and if there shall come a clash it will be due to no other fact than the come these arrogant operators will be humiliated in a manner they and their foolish advisers do not reckon with. The Constitution is yet in full force in Penasylvania."

The National Civic Federatioa, ia its efforts to end the strike, is attracting about as much notice as the miners and operators. The Brooklyn Eagle says of the Federation:

"Looked upon in advance as a scheme of dreamers and idealists, it was able to enlist such a very practical man as Mark Haana, aloag with Bishop Potter as the representative of the church, emineat capitalists and labor leaders, and notable theorists in political economy. The Civic Federation has already done good work in the avoidance of strikes, and it served usefully in the recent settlement between the freight-handlers and the railroads in Boston, altho it was the power and stanchness of Governor Crane which brought that trouble to an end. The Civic Federation expects to prevent this impeading coal strike. The man through whose agency it hopes to accomplish that work is Senator Haaua, who has been cartooned from one ead of the country to the other as the enemy of labor. In fact, Senator Hanna has controlled large mines and an extensive shipping business, without having serious trouble with his mea. When there have been differences they were adjusted in advance, and no one questions either the genuineness of the efforts Senator Hanna put forth, through this federation, to bring about a better . understanding between employers and men, his thorongin understanding of the situation, from the employers' side, or the extent of his influence when he chooses to put it forth. If the negotiations are carried through successfully it will mean to the prosperity of the country more than the discovery of a new gold or copper field would. Strikes might easily cost us more in our race for commercial supremacy than the advantage which our high development of labor-saving machinery gives to us. The great factors of our cheap production are our machinery and the fact that our workmen produce more goods for a dollar of their high wages than the foreign workmen do for the same sum, which abroad commands double or more than double of the laborer's time. Unless our high-class workmen are kept at work they are of no profit to us. The strike is a vital commercial question as well as a problem in sociology and morals. The Civic Federation is the most promising of the many schemes which have been tried for lessening the friction which breeds strikes. Its success in the present negotiations will affect the whole field of judustry."

## ESTIMATES OF CECIL RHODES.

T is generally conceded by the American papers that Cecil Rhodes was a great man; and many of them agree with the Denver Times in considering him "the greatest Englishman of his generation." But few, if any, call him a good man, "Few men in this age have done more mischief," declares the Philadelphia Ledger, and the Chicago Tribune says: "Mr. Rhodes's chief title to an infamy of fame is that he precipitated a cruel. wasting war upon his own people and the innocent people of independent republics. He did so for no better reason than to dispossess the Boers of their country and property for the benefit of people who were entitled to neither." This charge is disputed, however, by others who believe that if Mr. Rhodes had had a free hand in South Africa, he could have avoided the war and gained practically the same results by diplomacy. W. T. Stead. in a despatch to the New York American and Journal, says that Secretary Chamberlain was to blame for the blundering way in which the Jameson raid in 1896 came to grief. "Mr. Rhodes, unhampered by Mr. Chamberlain," he says, "would never have made such a fiasco," Mr. Howard Hensman, in his new book on

GROOT SCHOUR, MR. KHODES'S HOME NEAR CAPE TOWN

Mr. Rhodes, shows that Rhodes had made it plain to all South Africa that Mr. Kruger was blocking the path of progress and prosperity. The Cape Dutch and a large party in the Boer republics were coming to see that Rhodes, and not Kruger, was the best friend of the country, when the raid overturned the work of years and set the two races in unquenchable hostility to each other. Rhodes was considered the instigator of the raid, and that ended his popularity and political usefulness. He came into prominence again briefly during the seege of Kimberley, but has been little heard of since. "If the war had been avoided," says the San Francisco Pest, "Rhodes would have been the greatest man in the empire." Now, when negotiations for peace seem about to begin in the region where the British have lost over 18,000 mm by

death and over 61,coo by disease, and
the Boers an uncounted number, one
of the two men who
made South Africa
a dueling-ground between the forces of
progress and conservatism is living
in Holland in the retirement of age, and
the other has paid
the debt of nature at
forty-nine.

Not Hostile to the Boers,—"Men have lately seemed to think of Ceeil Rhodes chiefly as an aggressor against the two Boer states.

CLCH RHODES

He was not. He played for vastly larger stakes, and won them. His march of empire strode past their petty borders, almost carcless of their fate. Indeed, he was in most of his career the champion of the Afrikanders. It was by virtue of Afrikander or Boer support that he became Prime Minister of Cape Colony. He commanded the confidence and the cordial following of the Dutch and French races there. And when critics in Great Britain complained that he was acting too independently, and that under him South Africa was becoming too largely autonomous, he bluntly reminded them that that was the sort of talk which generations before had led to Bunker Hill and Yorktown. He was loyal to the empire. The Cape was loyal to the empire. But he told Great Britain frankly that the only way to preserve such loyalty unimpaired was through letting the Cape govern itself within imperial limits. Otherwise, the 'United States of South Africa ' was a name which he could easily learn, It is quite within bounds of credence that had he remained in power, and had not lesser men meddled with mischievous marplotry, concord would have prevailed between the races in South Africa, and the woes and losses of disastrous warfare would never have been suffered."-The New York Tribune.

The Rhodes and Kruger Codes of Morality .- "Mr. Rhodes's methods were not worse, and probably they were better, than those of most adventurous spirits who have extended the limits of civilization. They were certainly not worse than the means by which Mr. Kruger attempted to establish Dutch power northwest and southeast. Kruger's purposes were less favorable than Rhodes's to the general welfare, for he planned barriers to trade and settlement as a means of sustaining his policy of political isolation. Mrs. Schreiner has accused Rhodes and his Chartered Company of every imaginable cruelty to the blacks. But, on the whole, the English treatment of the blacks has been better than that of the Dutch, Rhodes made all his territorial acquisition under color of concessions from native kings; there is plenty of testimony to rebut that of Mrs. Schreiner; Rhodes vertainly tried to keep liquor from the blacks and prohibited flogging them in the territory of the Chartered Company; he generally had the blacks on his side as against the Dutch, and be settled the Matabele insurrection in 1897 by going unarmed among them and inducing them to leave the 'war-path,' His personal influence over white men was Napoleonic, if nothing else about him were, and he seems to have had nearly equal facility in influencing the blacks. Mr. Rhodes accomplished great things in extending British power In Africa, and proved a serious obstacle to German aggressions in that part of the world."-The New York Journal of Commerce,

The Capital Blunder of His Life .- "Yet this twentieth-cen-

tury Cortez and Pizarro, who was compelled by the spirit of his are to employ money where his progenitors used force, made the capital blunder of his life right at the end of his career. He thought money was the controlling factor in national affairs. He never dreamed that there was such a thing as a love of country which would resist the blandishments of wealth and the menaces of force. England, he told Stevne, the head of the Orange Free State, could buy out the two little Boer republics a thousand times over. The Boers, he told Chamberlain, would not fight when they saw the overwhelming armies which England would raise to go against them. If there was any such word as patriotism in his vocabulary it must have had some such a definition as Dr. Johnson gave it, 'the last refuge of a scoundrel.' This may who planned his Cape to Cairo railroad, a considerable part of which has actually been built, this boodler with an imagination, this statesman who 'thought in continents,' could not conceive of a people who preferred their own crude society with independence to the social development and the material prosperity which British annexation would bring, and who would fight to the death for this sentiment against the world's greatest nation. Rhodes extended the sway of the British empire over hundreds of thousands of square miles of the Dark Continent, but he was baffled at last by the love of nationality and liberty of a people whom, in the height of his power, he despised as barbarians scarcely a remove above the natives of the Africa in which they lived."- The St. Louis Globe-Democrat.

#### DILEMMA OF CAPTAIN CHRISTMAS.

I NTEREST is being manifested in a Danish officer who can not get people to believe that he is as big a rascal as he pre-tends to be. Not a paper in the country seems really to believe Captain Christmas's report to his home Government that he spent half a million dollars influencing members of Congress and others to favor the purchase of the Danish West Indies. Congressman Richardson says he has secured a copy of the captain's report, and he has induced the House to start an investigation, but the newspapers do not think it will amount to anything. Captain Christmas may have spent §80,000, or any other sum, they say, but they express the opinion that it went into the pockers of "cold-brick" to loubrists; who represented to the

captain with the cheerful name that the speeches and votes were direct results of the transfer of his coin. It seems that the captain is now in the Danish capital trying to get the Government to repay him for his expensive lobbying, but it is reported that his prospects of getting his noney back are poor. Inasmuch as the story has gained such prominence, however, many of the naneers think that an investigation should be made.

The allegations of the captain are "flimsy enough," thinks the Buffalo News, and the Springfield Republican declares that they "have the marks of a colossal fabrication." "If the Danish Government parted with half a million of its good money in the manner suggested," says the Hartford Courant, "Copenhagen must be a most unsophisticated capital." The Hartford Post says: "Captain Christmas is, by his own confession, a rascal, and in all probability there is no truth in the intimation that Congressmen were bribed. . . . It looks as if Captain Christmas had been trying to bunco the Danish Government. We don't believe he will bunco the American Congress." "The chances are a bundred to one," observes the New York American and Journal, "that Christmas is a liar who was on the lookout for a rake-off; but if so he lied to a government with which we are in negotiation for its islands, and the honor of the United States demands that his story shall be sifted to the bottom." Says the New York Tribune .

"It may be that this alleged 'secret report' is authentic. It is not impossible that someolody has been trying to 'bunce' the Danish Government. If that Government did send an unofficial agent here to promote the sale, it may be that the agent, desiring a large commission, felt it necessary to turn in an account of large expenditures to brite Congressmen. Possibly the Danish ministry accepted his statements and made the promise of a commission to be used for that purpose. If so, it has probably done nothing but promise some of its own unscrupulous agents an exorbitant payment for unuecessary vork. There was never any need for such britery as is charged, or indeed for such a whythere is the standing out for a larger price and making one difficulty after another, should have thought it necessary to brite the United States to buy what its

officials were eagerly trying to purchase is a mystery. We very much doult its ever having made such an agreement, tho some adventurer trying to magnify his own services may have represented the necessity for bribery and its claim to compensation as a briber.

"It will be well to have this glost laid, and Mr. Richardson's committee should probe the whole subject, if for no other reason than to disabuse the minds of Europeans who may believe that American politicians and newspapers were bought up by Christmas. The chances are that the whole thing is a hoax on some-body. If the Danish ministry ever did incur any obligations to Christmas on account of the sale it was in all probability victimated by its own patriotic agent. We may do a frendly turn to Denmark by hunting the facts and enabling it to save its money. It is a little surprising, however, that Mr. Richardson showed have been so slow in getting hold of this matter. It is not new, yet we should have to think it was sprung now as part of a despairing effort to prevent the ratification of the anuexation treaty by Denmark.

# DRINKING AND GAMBLING IN NEW YORK CITY.

DEOPLE who have been looking for some striking and visible change in the administration of affairs in New York City since the ousting of Tammany are beginning to ask when the transformation is to begin. Defenders of the administration reply that the new rulers can not be expected to get the disabled city machinery into running order in three months, and ask that judgment be deferred. The chief point of interest in the popular discussion is the Sunday saloon. "Watchers who have been on the lookout for the long prophesied 'dry Sunday' have postponed their hopes," remarks the New York Times (Ind.), and the New York World (Ind.) observes that "the metropolitan Sunday never is but is always to be dry." "If Deveryism does not go," adds The World, "the reform city administration will have failed at the vital point." Says the Chicago Chronicle (Dem.) : "The great 'fusion' victory over Tammany in New York at the municipal election last fall does not seem to have made any special change in the public morals or manners of the city. The same practises and methods which were charged to Tammany misrule continue to flourish as much as ever. . , . When New York escaped from Tammany to 'reform' control, it jumped out of the frying-pan into the fire."

The Sanday saloon situation is pictured as follows in the New York Tribune (Rep.) for Monday morning, March 24:

"The town was open yesterday. Not tentatively, not theoretically, but actually, triumphantly, open. The sacred concert pealed forth its healing notes to the accompaniment of clinking glasses. At the doorway of the Bowery concert halls was seen the old familiar face of the 'burker,' and the well-known strident notes of his invitation, 'Walk right inside; select and refined family entertainment now going on, 'was heard in the land again. There were no screens to hide the people basking behind the family entrance. As the water comes down from Loolore, so the beer flowed over the bar and gladdened the heart of the bibulous citizen.

"It may have been that springtime touched the heart of the guardians of public virtue with its genial glow; it may have been that even policemen were thirsty yesterday, for not a few were seen drinking their beer without any saving sandwich. But be that as it may, not since reform first occupied City Hall and seut forth its edicts of strenuous morality has there been such a free-and-easy town. The same conditions prevailed all over the city. The weary and sun-parched citizen had no need to use indement in the choice of his drinking-place. To one and all, stranger and habitué alike, the halls of the saloon were open wide. The soda fountains, which had been stocked in the prospect of a busy day, were idle. Their proprietors were loud in their denunciations of the open door, but silently and swiftly the thirsty sped to the family entrance. 'East Side, West Side, all around the town' there was an absence of restraint or even of the anxiety which has characterized other Sundays under the present régime. Neighbors who for Sundays have not dared to drink together hohoobbed over their glasses and discussed the lyric cry in the first robin's song yesterday."

The newspaper stories of the large losses of Reginald Vanderbilt in a palatial gambling-house up-town have drawn attention also to the gambling situation in the city. The New York Herald makes the following report on this point:

"It required only the sensational play that was made at Canfield's 'Saratoga Club' by the youngest son of one of the wealthset American families to emphasize the fact that New York is to-day as wide open to the gamblers as it was under the late Tammany administration. The only difference is that the 'penny robbers' have not been able to do business as they did a year ago.

The property of the last election it was often said by the present dis-During per and others that the gambling-hones could not remain open without the consent of the police. It was always added that police protection is invery given, but is often for sale. In recent interviews the district attorney and Police Commissioner Partrigle have admitted that they know that the gamblinghouses are still open, but they assert that they have not yet obtained evidence sufficient to warrant summary action.

"Frank Mosa, counsel to the Society for the Prevention of Crime, has publicly declared that the spirit of Deveryhmit all exists to protect the gamblers from the law. These are evidences that some action is contemplated by the men who were the terror of lawbrackers last year. In the mean time the mea who are managing the scores of open gambling-houses in New York are convinced that they are as safe as they were when they were guarded by the Tammany tiger.

"From the Battery to the Bronx gambling-houses and poolrooms are wide open, and play is even higher than it was when the leader of Tammany Hall were setting the pace by wagering vast sums at the faro-table and on the thoroughbreds. All along Broadway runners are stationed to persuade players that it is perfectly safe in the gaming resorts, and that they can risk their money without fear of police interruption. A few precautions that were unknown last year have been taken in the form of iron bars for windows and extra bars to doors. These are not intended for the purpose of keeping raiders out, as the gamblers well know that a raid honestly and earnestly conducted would result in their bolts and bars being burst like so many threads and in no longer time than it takes to push through a paper partition. But the show of steel gives patrons a feeling of security, and results in visits that would not be made if the old-time careless methods were employed."

In reply to these charges, District Attorney Jerome intimates that the police force is not yet up to the standard of honesty and efficiency to which Police Commissioner Partridge hopes to bring it. He says, in a newspaper interview:

"The police seem to think that Commissioner Partridge is an 'easy mark. He is far from belig an easy mark. They will find he is just the reverse. It is impossible to accomplish the change of heart sought in a day. Give as time. Commissioner Partridge is a thoroughly capable and honest man. The reason be is thought to be an 'easy mark' is because he does not transfer the captains about as was done by other commissioners. His attitude in this respect meets with my hearty approval. If wholesalo transfers were made, the opportunity of getting evidence against the captains for fating to do there 'duty would not come precinct to another, they could say that they had not time to get acquainted with a new place before being shifted to some other place. An order from the captain, as almost everybody knows, would result in a strict enforcement of the excise law.

"I am not striving to have 'dry Simdays,' but to make the police do their duty. When six or seven captains are broken for not doing what they should do, I tell you the other captains will quickly see that the laws are enforced. I think you will find after I have been in olifees six months a great change for the better in the police department. Even if my efforts to help bring would not cease to strive to obtain the end which is being sought for. I'm no quitter."

## WITHDRAWAL FROM CUBA.

THERE appears no disposition in the American press to criticize the decision of the Administration to turn Cuba over to home rule on May 20. Nor does there seem to be, even among the most persistent critics of the expansion policy, much tendency to infer any but good motives from the steps that have marked our military occupation of the island. President-elect Palma says, in a newspaper interview:

"The Government of the United States has abown a most beautiful example of good faith in dealing with a weak Government which it undertook to rescue from its oppressors. Some countries would have sought some pretect for selfsh agin in undertaking a work of this character and taken advantage of some technicality for their own aggranditement, but the contarry a spirit has been manifested by the United States, and it has given to the world an evidence of good-will seldom found. The people of the United States have remembered their own Declaration of Independence and have fulfilled a duty to mankind."

This is taken by many journals as a good oppportunity to review the good deeds done in Cuba by the American officials. Says the Chicago Tribune, for example:

"The military occupation has been marked by the performance of definite services to the Cuban people. The army has not been engaged simply in holding the island down. It has been doing much more than that. It has, of course, established peace and security from one end of the country to the other. This in itself is an achievement of which the United States may well be proud. Cuba is now for the first time in many years devoting Itself to agriculture rather than to bashwharking.

"It is in two other matters, however, that the American administration particularly deserves credit. The sanitary condition of the island has been greatly inproved and a system of public education has been instituted. In 1910 the death-rate in Havana was about one-half of the average for the previous thirty years. This result was accomplished, not only by the introduction of better means of disposing of garbage and sewage, but by the measures taken to exterminate the measures test that had been carrying about or great the same of the same o

"Its physical well-being, therefore, Chia owes to the War Department. It owes to the same body of men its system of public schools. When General Wood took charge of the island he found that over sixty per cent. of its inhabitants were illiterate. He immediately set to work to effect a change. What he has done is too well known to need repetition. The Cuban children are now learning how to read and write.

"It is no wonder, then, that Sefor Palma said in a recent interview; 'I have complete confidence in the good faith and generosity of the American people.' The American people have deserved this confidence. They have perhaps done more for Cuba than any other nation has ever been able to do for any dependency in a similar length of time. As far as Cuba is concerned the War Department has managed not only to avoid scandal and to get away with clean kirts; I thus achieved an onable success in efficient, aggressive, administrative work. All that it has to do now is to pack up its flag, its typewriters, and its card catalege and come home. Its protégé is about to undertake to manage its own affairs.

"So closes this incident, or at least a phase of it. On the 20th of month after next the people of the United States will say to the War Department: Thanks; and to the Cuban republic: Good luck, Then will begin a new experiment."

Annexation does not seem to be contemplated by the great majority of the American press. A few papers, however, look forward to it as a future probability. The St. Louis Globe-Demorrat, for instance, says:

"Cuba is a ward of the United States, and the people of Cuba, of the United States, and of the world know this. On some parts of the soil of Cuba the stars and stripes will remain flying after

the formal transfer of sovereignty is made to the Cuban Government next May, June, or whenever else the transfer takes place. The military and naval stations will be occupied by the United States from the beginning of the existence of the Cuban republic. The American flag will remain up in Cuba after Cuba theoretically takes its place among the family of nations. Even this technical independence will be comparatively short, for both the Cuban people and the people of the United States want annexation, and know that it will come at an early day. Physically, Cuba is part of the territory of the United States, and was sorecognized by Jefferson long before Florida became formally annexed to this country. Every American statesman of any consequence since Jefferson's time has looked upon Cuba as an ultimate acquisition of the United States. The ceremonies which will be gone through with in Havana and other parts of Cuba in May or June next when the American flag will constructively be pulled down and the Cuban flag be technically run up will be interesting and impressive on the surface of things, but the person who looks back of this stage-play and grasps the vital forces of political evolution which are at work on the American continent will see that all this acting is merely the prelude to the events which will raise the Stars and Stripes all over the island again, and which will keep it floating there forever.'

#### WESTERN ROADS WILLINGLY ENJOINED.

FTER complaining for years, in reports to Congress, of inability to enforce its mandates upon offending railroads, the Interstate Commerce Commission, so the newspapers note, discovered last week that it could enforce the interstate commerce law by obtaining injunctions from the courts, and discovered, further, that the railroads "came down" promptly, and submitted to the injunctions without even a show of fight. Judge Grosscup, in Chicago, remarked, in granting the injunction, that "the interstate commerce act has hitherto been ineffectively executed, but the taking of such power by the courts as this injunction implies might turn out to be the vitalizing of the act." By the two injunctions issued by Judge Grosscup in Chicago and Judge Phillips in Kansas City, fourteen roads are restrained from carrying goods at any greater or less rate than the published schedule, and from paying rebates or making other concessions to favored shippers. The railroads did not contest the issuance of the injunctions, merely reserving the right to move later to dissolve them. One of the attorneys for the roads is quoted as declaring it not improbable that the roads will allow the orders to stand without any future motion to have them dissolved. He said: "We may find the enforcement of this law so beneficial that we will not care to have the restraining orders set aside."

It will be the small road, not the large one, that will be hardest hit by this action, declares "one of the leading trunk-line officials," who is quoted in the New York fournal of Commerce. He says:

"This action in the West undoubtedly marks an era in railroad affairs in this country. Five years ago it would have been the source of widespread disaster. To-day its influence is quite as important, and I am very frank to say that the only reason disaster is not apt to follow is the interholding of securities of the various large systems of railroads by associated capital. The effect of the injunction is to compel absolute and unequivocal maintenance of such rates which have been approved by the Interstate Commerce Commission. Five years ago such an injunction would have resulted in an immediate and open cut in their tariffs by the weaker lines of fully 5 cents east-bound from Chicago and 3 cents from Missouri River points. To-day it is only the community of ownership which prevents such a cut immediately, but the incentive still is there and the necessity is there; and it is safe to presume that the deliberate way in which the injunction has been received is merely an indication of the fact that the new condition will be met after a careful discussion of consequences.

"The injunction means that any employee entting tariffs will

be punished for contempt of court. It seems quite fair to presume that there will be no cutting by the lines already enjoined. and that these lines will in turn see to it that other lines will do no cutting either. Now then, I should like to know how the weaker lines-the lines that usually are tacitly allowed a differential-are going to get any business at all. They certainly can not attract business by quicker deliveries or more convenient deliveries, or in any other way except by transporting the goods at a lower rate than the stronger lines, for the reason that the latter have obtained their strength and commanding position very largely by their up-to-date facilities and their promptness of despatch. I think I am not overstating the matter when I say that railroad men are convinced that a most unfortunate coudition of affairs has been created. The weaker lines have got to get business. The only way they can now get it is to bid openly for that business by filing reduced tariffs. The stronger lines can not and will not allow open tariffs to be filed naming lower rates than their own, and It will certainly be interesting to see what method of clearing the situation can be devised. It can not be met by any pooling arrangement because the Supreme Court has declared that such arrangements are in restraint of trade and in violation of the Sherman anti-trust act. It can not be met by any appeal to the Interstate Commerce Commission for the reason that the interstate commerce act practically deprives the commissioners of any power to modify the impracticable provisions of the act. The railroads have been driven into consolidation by the interstate commerce act, on the one hand, forcing them to do certain things which the Sherman anti-trust law, on the other hand, declares illegal."

The Chicago Record-Herald and Evening Post are non-committal in their comment. The Journal of Commerce, just quoted, says editorially:

"When the railway companies, eight years ago, obtained from the courts injunctions to prevent their employees from striking, or from performing actions in aid of their strikes, the novelty of the procedure attracted universal attention. The courts very generally granted the injunctions, tho many good lawyers have deprecated this method of procedure. The labor organizations were naturally very indignant at a process by which a striker could be taken summarily before a judge and, without trial by jury, be sent to prison for six months for contempt of court, instead of being indicted, released on bail, and tried at his convenience before a jury for the act complained of. Court after court, however, has sanctioned the injunction process, and the labor troubles of last summer were particularly productive of injunctions against strikes and all the methods employed to make strikes effective, and one judge went so far as to enjoin strikers against any method of trying to persuade others to strike, even by private conversation and the distribution of literature.

"The Interstate Commerce Commission has turned the tables on the railway companies by getting them enjoined from violating the interstate commerce act, the ordinary method of prosecuting them for violations having led to very meager results."

Boycott Legal in Missouri,—The recent decision of the supreme court of Missouri, that any man or number of men could legally issue an appeal or circular urging upon citizens generally the peaceable boycotting of a given person or corporation, is attracting some attention. The Chicago Post says:

"If peaceable boycotting were criminal under any circumstances, a circular advising and urging boycotting would obviously be an invitation to commit crime. Would the supreme court of Missouri, in the name of free speech, uphold the right to scatter circulars advocating force and intimidation? Would it heistate to enjoin the publication of such circulars? It selection, closely analyzed, implies the legality of peaceable boycotting. If so, it marks a new departure."

The decision was the result of an infunction to prohibit the publication of a circular calling upon the people of St. Louis to withhold their patronage from a certain firm. This circular was issued by a committee appointed by two or three unions of St. Lonis. The court decided that the labor-unions could not be restrained by equity from exercising their constitutional rights of free speech and free publication. It further stated that if the circular did not contain libelous statements or threats of force, it was not an abuse of liberty.

"Promotion" of Commissioner Evans.-While the Philadelphia Press and some other papers think that Pension Commissioner Evans has, by fearless performance of his duty. earned the right to retire, a number of papers remark that he has earned the right to stay exactly where he is. It is stated on high authority in Washington that the commissioner resigns volumtarily, and is to be rewarded by promotion to some higher place; but it is the opinion of the New York Press that he has dropped into the "jaws of the sharks which have hungered for him." It seems to the New York Times that "it is neither proper nor even excusable to retire him," and the Philadelphia Ledger thinks that "the logical reward for his fidelity to the public interests and his undeviating efforts to make the pension list a roll of honor should be retention, and not transfer or 'promotion' to some other office, where the demand for his service is less incistent " Says the New York World :

"Commissioner Evans has finally been forced out of the Pension Office by the claim agents and their elients, the professional pension-hunters. It is announced that he will receive an important diplomatic appointment, and that 'the policy of Commissioner Evans will be continued by his successor."

"What nonsense! If the Evans policy of careful scrutiny and fearless honesty is to be continued, the man to continue it is obviously Commissioner Evans. He is going as the result of the persistent warfare waged against him by the pension-promoters and a fear of the 'old soldier' voice. No' promotion' of the commissioner or promises from the Administration will make the people believe differently.

"Meanwhile, nearly forty years after the close of the war for the Union, there are about 1,000,000 pensioners on the rolls, costing the taxpayers \$10,000,000 a year. The increase in the number of pensioners since 1875, ten years after the end of the war when thereal Garfield said the high-water mark had been reached—is \$62,014. And the increase in the cost within the same time has been \$10,000,000.

"And because Commissioner Evans sought to enforce the liberal laws in a manner to defeat fraud and to protect the Treasury he is to be 'promoted' out of the office!"

# LETTERS AND ART.

## CAN POETRY EVER BECOME POPULAR?

I N the discussion of the question, "Is Poetry Losing its Popularity?" which appeared in our pages two weeks say, the answers given were in the main affirmative ones. Mr. W. B. Yeats, the gifted Irish poet, who has been considering the same problem in The Cornhill Magazine (London, March), takes an even more pessimistic view, leaving the reader to infer that under present conditions it is practically impossible for poetry to become "popular" in the true sense of the word. Writing of his own ideals, as a woung man, he says:

"I wanted to write 'popular poetry,' for I believed that all good literatures were popular, and even cherished the fancy that the Adelphi melodrama, which I had never seen, might be good literature, and I hated what I called the coteries. I thought that one must write without care, for that was of the coteries, but with a gusty energy that would put all straight if it came out of the right heart. I had a conviction, which indeed I have still, that one's verses should hold, as in a mirror, the colors of one's own climate and scenery in their right proportion; and, when I found my verses too full of the reds and yellows Shelley gathered in Italy, I thought for two days of setting things right, not as I should now by making my rhythms faint and nervous and filling my images with a certain coldness, a certain wintry wildness, but by eating little and sleeping upon a board. I felt indignant with Matthew Arnold because he complained that somebody, who had translated Homer into a ballad measure, had tried to write epic to the tune of 'Yankee Doodle.' It seemed to me that it did not matter what tune one wrote to, so long as that gusty energy came often enough and strongly enough. And I delighted in Victor Hugo's book upon Shakespeare, because he abused critics and coteries and thought that Shakespeare wrote without care or premeditation and to please everybody. I would indeed have had every illusion, had I believed in that straightforward logic, as of newspaper articles, which so tickles the ears of the shopkeepers; but I always knew that the line of nature is crooked, that, tho we dig the canal-beds as straight as we can, the rivers run hither and thither in their wildness."

Mr. Yeats declares that early in his literary career he came to know that "what we call popular poetry never came from the people at all." Longfellow, and Campbell, and Mrs. Hemans, and Macaulary, and Scott, are "the poets of the middle class, of people who have unlearned the nurvitten tradition which binds the unlettered." Poetry ever "presupposes more than it says."

and the common mind can not comprehend it. Mr. Yeats continues:

"I have heard a baker, who was elever enough with his oven, deep that Tennyon could have known what he was writing when he wrote." Warming his five wits, the white out in the beliffy sits? and once when I read out Omar Khayyant to one of the heat of candle stick-makers, he said, "What is the meaning of "we come like water and his ewind veg or?" Or go down into the street with some thought whose bare meaning must be plain to everythedy; take with you Ben Jonson's "Beauty like sorrow dwelleth everywhere," and hind out how utterfy its enchantment depends on an association of beauty with sorrow which written tradition has for the unwritten, which had it in its turn from ancient religion; or take with you these lines in whose bare meaning also there is nothing to stumble over, and find out what men lose who are not in love with Helen:

Brightness falls from the air, Queens have died young and fair, Dust hath closed Helen's eye.

"On the other hand, when a Walt Whitman writes in seeming defiance of tradition, he needs tradition for his protection, for the luttcher and the backer and the candlestick-maker grow merry over him when they meet his work by chance. Nature, which can not endure emptiness, has made them gather conventions which can not endure emptiness, has made them gather conventions which can not disguiste their low birth, tho they copy, as from far off, the dress and manners of the well-bred and the well-born. The gatherers mock all expression that is wholly unlike their own, just as little boys in the street mock at strangely dressed people and at old men who talk to themselves.

There is only one kind of good poetry, Mr. Yeats goes on to say, whether it be poetry for the "coteries" or poetry for the people. "Both are alike strange and obscure, and unreal to all who have not understanding, and both, instead of that manifest logic, that clear rhetoric of the "popular poetry," gimmer with thoughts and images whose "ancestors were stoot and wise," 'amigh to Paradise," 'ere yes men know the gift of corn," "He concludes:

"Among all that speak Engisti in Australia, in America, in freat Britian, are there many more than the ten thousand the prophet saw, who have enough of the written tradition education has set in room of the unwritten to know good verses from ado ones, even the their mother-wit has made them ministers of the erown or what you will? Nor can things be better till that the enthousand have gone bither and thinter to preach their faith that the imagination is the man himself,' and that the world as imagination sees it is the durable world, and have won men as did the disciples of Ilim who-

> His seventy disciples sent Against religion and government."

IL CARPENTER

JOHN BURBER WALKER.

#### THE BEGINNINGS OF AMERICAN FICTION.

A T a time when the literary market is flooded with novels inmunerable, it is interesting to look back to the humble beginnings of American fiction. Canales Brockden Brown, of Philadelphia, is often spoken of as the "Father of American fiction," and his "Wieland" (published in 1796) is cited as the first Ameican novel. But, as is pointed out by Mr. Oscar Wegelin in The Literary Collector (New York, February), Brown, while probably the first American to seek a livelihood from literature, was by no means our first novelist. Mr. Wegelin says.

"As early as 1774, two years before the signing of the Declaration of Independence, a little pamphlet of sp pages, bearing the following title, 'A Pretty Story Written in the Year of Our Lord 1774, by Peter Grievous, Esq., A.B.C.D.E. 'was issued from the press of John Dunlap in Philadelphia. This little work, while his, as far as is known, the first work of fiction written in America, was written by Francis Hopkinson, a signer of the Declaration, and the author of the famous Revolutionary ballad,

'The Battle of the Kegs,'

"The Pretty Story," which is written in the style of Arbuthoro's 'John Bull,' is said to have met with great success, which probably accounts for its great rarity. (I have discovered but one copy.) It represents England as a nobleman possessed of a valuable farm and having a great number of children and grandchildren, for the government of whom he had entered into various compacts. Parliament is represented as his wife. The fortunes of the American stutlers are also depicted, and the eneroachments of Parliament forcibly described in a rather hacteristic than the contract of the contr

Much better known than Hopkinson's political novelette is "The Power of Sympathy, written by Mrs. Sarah Wentworth Morton and published in Boston in 1780. This "novel of social tendencies" was followed by the Rev. Jeremy Beltangi's Foresters," a humorous tale of country manners. Mr. Wegelin continuous.

"The best-selling work of fiction during the early days of our republic was 'Charlotte Temple,' written by Susanna Rowson, a popular writer in this field, and also known for her career as a dramatist and performer on the early American stage, 'Charlotte Temple' was first published in England in 1790, but as the anthoress was prominently identified with America from 1703 until her death, which occurred in Boston, 1824, I believe it worthy of notice. The first edition issued on this side of the Atlantic came from the press of Matthew Carey, in 1794, and continued to be published at short intervals up to the middle of the last century, which is rather remarkable. How many of the novels published to-day will be read fifty years hence? Mrs. Rowson also wrote a sequel to the above work, entitled 'Lucy Temple, or the Three Orphans, and in 1795 Rebecca; or, the Fille de Chambre'; while in 1798 she published Reuben and Rachel; or, Tales of Old Times.' With the exception of 'Charlotte Temple,' however, these writings were soon forgotten, and to-day are of interest only as early specimens of this class of literature.

Even the historical novel was represented in this early era of American literature. In 1793 Hugh Henry Brackenridge, of Scottish birth, but a graduate of Princeton, and at his death in 1816 a judge of the Pennsylvania supreme court, published "Modern Chivalty; or the Adventures of Captain Farrago and Teague O'Regan, His Servant." It was a tale of the whisky insurrection in Pennsylvania, and quite appropriately was issued from the press of the Pittsburg Gazette.

Commenting on these examples of eighteenth-century fiction in the United States, the Chicago Inter Ocean says:

"Thus early in our literary history we had specimens of the political satire and tale of local manners, of the tendency or 'problem' novel, the historical romance, and the domestic tragcdy. Quite in the modern way, the latter was decried as altogether too 'scalistic.' There are living women whose careful mothers forbade them to read 'Charlotte Temple.' In these were planted the seeds of 'Slackelet' and 'David Harram,' of 'Richard Carvel' and 'The Portion of Labor,' and of all the fiction dealing with social and sexual relations, so abundant of late

"So, even in the United States, fiction of all kinds is of quite a respectable antiquity."

## A PLAY BY A ROMAN CATHOLIC PRIEST.

THE Rev. John Talbet Smith, a Roman Catholic priest of New York, has written a historical drama, which has been accepted for preduction by Miss Henrieta Crosman. The play is entitled "A Baltimore Marriage," and deals with the troubled career of Elizabeth Patterson, the Baltimore girl who became the wife of

Jerome Bonaparte, brother of Napoleon I., in 1803, and whose marriage Napoleon attempted to declare null two years later. The most striking feature in the play is the introduction on the stage of Pope Pius VII., who is carried through two of the five acts, and who furnishes the dramatic climax by refusing to grant a divorce to Napolcon's brother. The Cathelic Citizen (Milwaukee) prints

REV. JOHN T. SMITH.

the statement that "this is the form of the English drama." When questioned with regard to the approval of the church authorities on this point, Father Smith replied; "No one will take exception to that. Neither Catholics nor Protestants can object to the head of the church appearing in a play and refusing to grant a divorce that is palpably unjust. You may call it a hold steen, but it will cause no unfavorable discussion.

The New York New points out that Pather Smith is in good company as a playwright, since Lope de Vega and Caldeno, the great Spanish dramatists, were both priests of the Roman Catholic Church. Only a few days ago the Abbé Jouin's play, "La Passion," was produced in Paris, and this is said to be the first play by a priest ever produced in a licensed theater in France. The Sum continues:

"Out of France, the 'cloth' has taken a good deal of interest in the stage; and even since the days of miracle plays and mysteries and moralities, has contributed not a little to dramatic literature. Bishop Martinano, an Italian prelate, translated and mintated Greek and Latin tragelies more than forn hundred years ago, while Cardinal Riano attempted to revive the ancient theater in the time of Leo X.

"In England Bishop John Bale wrote nineteen drams, the they were rather mirace plays than plays of the modern style. But an early consely in England of the fashion that has lasted to today was "Gammer Garton's Newleck." by Bishop John Still, whose jovial drinking song, legiming: I can not eat but little meat, is better remembered liban his play, John Home, in taken andiences into their confidences regarding the way In which their fathers kept their whosk upon the Grampian Hills, was a Presbyterian minister until he had to surrender his living because of writing a play. Charles Maturin was an Anglican clergyman, whose ghoomy tragedy "Bertram" found in Edmund Kean an interpreter so successful as to lead the author to give up the church for literature. George Croly was a clergyman, but his tragedy of 'Catiline' is remembered better than his sermons, and Dean Milman wrote for the stage as well as for the pulpit, his tragedy of 'Fasio' having been kept alive to recent times by Mary Anderson's performances of it. The latest English clergyman to turn to the stage is perhaps the Rev. Freeman Wils, who, after several partial or complete failures, has made one success at least with 'The Only Way."

Of Father Smith's literary reputation the Boston Pilot says:

"The author of 'A Baltimore Marriage' has already much excellent literary work to his credit. He has written several novels, the best of which is 'Saranac,' and a collection of brilliam short atories entitled 'His Honor the Mayor,' Among his books of graver cast are 'Our Seminaries' and 'The Life of Brother Azarlas.' Since his able editorship of the late Cuthelia Review, Father Talbot Smith has been free of a parish charge; and, the duties of his chaplaincy being light, he has time for literary volopment has been steady and on original lines. Father Talbot Smith has already proved himself capable for dramatic intensity, picturesqueness, brilliam wit, and matural dialog. The production of 'The Haitimore Marriage' will be eagerly awaited.'

# IS TOLSTOY'S "RESURRECTION" AN IMMORAL BOOK?

A STRANGE issue las been raised in connection with Count Tolstoy's latest novel, "Resurrection," the English translation of which was made by Mrs. Aylmer Maude. Tolstoy, as is well nown, stipulated that the profits on the book were to be used to assist the Doukholors, the Russian Quaker sect, and with this end in view a check for £150 was seen thy Mrs. and Maude to the (Society of) Friends' Doukholor cummittee. The money, however, was returned some months later by Mr, John Bellows, the secretary of the committee, with the following letter.

"While I fully recognize the kind intention of Louise Maude and thy self in sending to our committee that  $f_{150}$  for the Doukhobors, yet on carefully thinking it over I am convinced that we ought not to have taken it.

"Count Tolstoy, in writing 'Resurrection.' intended two things; first to help the Doukhobors by raising money for them; and next to promote the cause of morality by the deindment of the story. And his friends in England who translated and helped to publish the book fully intended the same things...

"When I read the MS, however, it became clear to me that the moral, which was meant to make the greatest impression on the reader, would not do so; but that an enormously more powerful and more immediate effect would be produced by the scene of the seducion itself, giving, as it does, details that force the reader to realize, that is to share nlove or less, the sensations of the surfixes who are chief to the narrative.

"That is, the reader is brough) so close to the transaction that the effect of the narration is such as would be produced—and is produced—by the close study of obscene photographs. In other words it arouses hist. . . . . . .

"I oute understand that this did not strike Count Tolstoy in writing it, the *end* being so present in his mid at the time; but the end is not present to the mid of the average reader, who is simply egged on to indulge in unlawful desire by the suggestion of how eavy it would be under similar circumstances to accomplish his purpose.

"The high character-the name of the writer-carries it into homes where it brings contamination for the first time.

"But I can not rest with the matter left thus. It is a stain on the Society of Friends to use money coming from the sale of a similar book, as it would be if the money came from the sale of indecent photographs: and after a careful thinking it over... I must refund the money out of my own pocket, rather than let it remain as it is. Whether the committee will deem it right to repay me, I can not tell."

The Friends' committee later indorsed the action of its secretary, and Mr. Maude, who reprints the foregoing letter in his "Report and Account of the 'Resurrection' Fund," has the following to say in comment:

"The whole letter, of which I have quoted part, is characteristic of the writer; it bears the marks of thorough sincerity and earnestness. Many a man besides John Bellows is feeling the tremendous importance to man, and to society, of the sex question. And nany are becoming aware that the old landmarks are disappearing; respect for the moral authority of ceremonies in church, meeting-house, or registry office is being more and more called in question, the old barriers are breaking down; yet the passions they helped to restrain seem—in not as strong as in the days of Solomon—amply strong enough, if nonrestrained, to break up any and every lumna society.

"I can not hlame any one who frankly and boldly says what he believes to be true on the matter, and disassociates himself

from what he believes to be wrong.

"Only, I think, John Bellows has not thought the matter out. If I may venture to guess, I should say he was probably brought up to the opinion that there were two, and only two, kinds of literature dealing with sex matters: the dry, diductle kind which gives information or precepts; and a bad, lust-producing kind provided by novelists and poets, -especially foreigners. So when he takes up a novel, I imagine, he does not notice what feelings the writer (if really a literary artist), having experienced, feels moved to share with us; but he simply sees what subjects the book deals with, and if among them is the sex question (with regard to which it is so tremendously important that our feelings should be guarded rightly), he considers it an immoral book, especially if the treatment be outspoken and explicit. Whereas, really, as I understand the matter, a book like 'Resurrection' which deals boldly, clearly, and profoundly with this matter-telling no lies, shirking no facts, but making the receptive reader share the author's feeling that lust and sex-passion poison and spoil life without offering any adequate compensation is a profoundly moral and useful work. The thought and the feeling the book inspires are, I believe, the same that life-long experience brings to one who strives to know what is good. And if that is immoral, then the nature of things is immoral also, and all the striving, all the learning, and all the experience of humanity are leading nowhere!"

This incident has called forth some interesting comment in literary circles. The London Academy declares that it awaits Tolstoy's comment with some interest; and George Bernard Shaw makes the following contribution to the discussion in The Week's Survey (London):

"There is no reason to doubt the perfect sincerity of Mr. Bellows's account of the effect produced on him by the episode in 'Resurrection,' It is well known that there are persons-very worthy persons in many respects-with whom moral discussion is impossible, because they are the victims of chronic temptation. For example, reclaimed dipsomaniacs have protested piteously against the use of wine at the communion table, because the taste of it has swept away all their resolution to abstain, and plunged them into mad excesses of drinking. Pictures of angels : in churches and images of the bodies of martyrs have been ob jected to on analogous grounds. Several of the stories in the Bible, no doubt, produce the same effect on some people that Tolstoy's story has upon Mr. Bellows. It is quite possible that one of the results of Mr. Bellows's letter will be to make a few morbidly susceptible people buy the indecent photographs to which he refers. All this is pitiable; but it can not be helped. The world can not be conducted as a reformatory for morbid people; and even in such a hospital the patients had better brood on Tolstoy's book-a very wholesome book-than upon the suggestions of their own imaginations."

Mr. Naude's "Report of the 'Resurrection' Fund," to which he adds the sub-title, "and of difficulties encountered in administering it," brings out some curious facts regarding the mismanagement of Tolstoy's book in England. Not the least of the "difficulties encountered," he claims, was that caused by the habitum failure of the London publisher of the book (a Todstoyan propagandist) either to make reports on sales or to pay royalties? Between April 2, 1998, and August 30, 1991, £1,694 \$8, 74, were received on the book, no less than £1,200 dividic came from the American publishers. Until now the sales of the English edition in cheap paper copies have been very limited, but a reputable London publisher line lately consented to reissue the book in more suitable form and to put it on the market in the meal way.

# ENGLAND'S ART TREASURES AND THE "AMERICAN PERIL."

M.R. CLAUDE PHILLIPS, a well-known art critic of London, and curator of the recently opened Wallace Collection in Heriford Ilonse, has unmasked a new form of the "American peril." He finds that England is being rapidly despitied of her art treasures by American capital, and he sounds the note of lairm. "For the

THE LATE HENRY G MARQUAND,

of narm. For the last twenty years or more," he says, "the gnins of England in masterpieces of painting and in works of art gen erally have been greatly have been greatly have been continues (in The Nineteenth Century and After, March):

"If the flow of works of art westward is as yet a moderate tho already a menacing stream, it threatens soon to become a

One of America's Leading Art Patrons cataract, then a mighty river, then an ocean-so astonishing is the last for pictures, good, bad, and indifferent-but above all expensivethat has developed itself, partly, it is true, among genuine connoissenrs of the higher order, but in the main among those who regard the possession of great and much-talked-of canvases as a form of ostentation, a convenient method of announeing to all whom it may concern-or not concern-the possession of great wealth and unbounded enterprise. It would be an absurdity and an impertinence to say to a great and friendly nation, bent on preeminenes in all things, and backed up by re-sources seemingly limitless, growing from day to day, too, as the snowball grows, that they shall not develop and complete their collections by the acquisition of such masterpieces of art as are still in private hands, whether in England, in Italy, or elsewhere. The American millionaires have their own arguments. unanswerable from their own point of view. The nobler and more large-minded among them, with a splendid and discerning generosity, desire to give to the American nation as a whole the benefit of their vast accumulations of wealth; to afford them every means of perfecting the higher education, the artistic as well as the practical. The Metropolitan Museum of New York is almost wholly made up of bequests, donations, and loans from private individuals, prominent among them being the collection presented to the city by Mr. Henry G. Marquand, and the group of three famous Rembrandts temporarily deposited in the municipal gallery by Mr. H. O. Havemeyer. Mrs. John S. Gardiner of Boston is about to convert into a private museum, regularly visible to the public on certain days, as are the Roman and the Viennese galleries, her collection of old masters of all schools, the most remarkable in point of quality in the United States, . To stock these private galleries, these museums, no efforts will be spared, no price will be considered excessive."

The largest buyer of British pictures during recent years, declares Mr, Phillips, has been J. Pierport Morgan, an art patron who has, on occasions, "exhibited more generosity than discretion in his purchases," On this point the writer says:

"No sigh of regret would be heard if the celebrated, or rather the notorious, 'Duchess of Devonshire,' whose face Gainsborough never saw as we now see it in its crude and vulgar brightness, were once more to wander into exile, and acquire a permunent domicile in the United States. The vast 'Holy Family ' ascribed to Titian, and as such lent to the present exhibition of old masters at the Royal Academy, is a work wholly beneath criticism; it would be an outrage to ascribe it to any great Venctian of the sixteenth century. It is one of those things which anywhere else it would be best to pass over in silence. "Now ragioniam' di lor, magnarda e passa,' To the credit side nre. however, to be set many exquisite things. A great loss to Raffael students and lovers of Italian art is the 'Madonna of the Nuns of S. Antonio,' the vast altar-piece of Raffael's early time, which hung for so many years, comparatively unnoticed, with the Cartoons, in the Raffael Gallery at South Kensington, but has suddenly become an object of general interest because Mr. Morgan is said to have paid £100,000 for it, . . . Then there are in the Morgan collection a genume Velazimez, 'The Infanta Maria Teresa,' the superb Genoese Van Dyke, 'A Ludy and Child,' now at the Academy; several Sir Joshuas, including the beautiful portrait group, 'Lady Betty Delmé and her children' (acquired from Mr. Wertheimer), and 'Mrs. Payne-Gallpey carrying her child pick-a-back '; Gainsboroughs far finer in quality than the much advertised 'Duchess': the exquisite Romney known as 'Emma Lady Hamilton reading news of Nelson's Victory'; the popular and often reproduced Master Lambton' of Sir Thomas Lawrence; and celebrated landscapes by Turner and Constable,"

What can be done, asks Mr. Phillips, to stem this new American invasion? What counter-influence can be brought to bear upon British owners of great petures who are "drawn against their will by the irresistible golden magnet; desfirms it may be doing their duty to themselves and their country, yet wavering and trembling under the fascination of great figures, as the doomed creature does under the gaze of the serpent? " He calls for legislation that will enable l'ardiament to meet this "great and ever-growing danger," and, failing this, he appeals to the individual conscience:

There are certain great works which under no circumstances should ever again be allowed to leave our shores-works in respect of which, it can never be too often repeated, the owner is morally, if not legally, the trustee for England, and in a larger sense for the world. If the owner of any of these be resolved. or by his necessities compelled, to sell, let him still be mindful of his trusteeship. Let him not surreptitiously, in the hushed quiet of dark closets, make his bargain with the agent of the foreigner offering the biggest price, and with it the promise of a secrecy that can never be maintained. Let him boldly come forward, and offer his treasure in the first instance to the Government for a national museum, or to that museum direct; or, failing this, to a municipal or provincial gallery; or, if there be no response in these quarters, then to an Euglishman, or a collector permanently domiciled in England. This is a case in which patriotism and a sense of the responsibility tacitly undertaken with the ownership of a great masterpiece should prompt even the needy owner to accept a lower price from the nation than he would claim from the individual-especially from the marauder attacking from without. He who, regardless of his manifest duties in this respect, either procures or accepts such secret bargains as are to the detriment of the nation and in defeat of its moral rights, must, in my humble opinion, be deemed a citizen who has forfeited his claims to citizenship by preferring the private good to the public weal."

A Defense of the "Ephemeral" in Literature.— W. L. Alden, in one of his recent London letters to the New York *Times Saturday Review*, takes occasion to comment on "the eurious fact that the ablest men are prone to read the poorest novels, and to find enjoyment in so doing"; and he cites John R. Green, the English historian, and Robert Louis Stevenson as examples of men of great literary genius who were accustomed to seck relaxation by reading "thrid- and fourth-rate novels." Their course wins commendation from at least one cultured reader, who writes a letter to the same paper in defense of "the book which diverts and relaxes, rather than that which teaches, or preaches, or harrows." This writer says:

"There are few enough nowadays, alas! of these books which divert. The superstrenuousness of both authors and critics does its best to put down frivolity with an iron hand, and the novelist is brave indeed who ventures to present that lighter side of life which, heaven be praised, still exists; but as the man of affairs unblushingly prefers floyt to Ibsen, so many people (even those who profess letters) turn with relief at the close of their labors to the comfortable, frivolous, purposeless tales of Rhoda Broughton, Mrs. Alexander, and John Strange Winter. Young persons who, in the pride of unwearied minds and bodies, having been taught to properly scorn the merely entertaining, may choose 'Sir Richard Calmady ' or 'The House with Green Shutters' as the concomitant of dressing-gown and slippers, but mothers of families, tired men, and even literary persons themselves, guilty of Ingubrious performances, turn with relief to the pleasant pages which dare to ignore the requirements of the hour and, secure in the range of their past reading, gloat over the froth and superficiality which are all too sparingly supplied to us. We buy large, solid books, but we look to our libraries for these novels of an evening, and if a well-meant paternalism is really to deprive us of our individual needs let us trust that some sympathetic millionaire will endow a new institution for the preservation and encouragement of light literature; that those who in the fulness of knowledge read for their own pleasure and relaxation may still be supplied with that ephemeral 'trash,' through the pleasant pages of which the weary mind may idle, unbarrowed and uninstructed, in the mere shameless pursuit of diversion and rost '

#### ANATOLE FRANCE'S POETIC DRAMA.

THE greatest stylist in contemporary France. Annuole Prance, novelist, critic, historian, philosopher, and religious skeptic, has tried his hand at poetic drama, and, according to the consensus of competent opinion, has achieved a twofold streess. He has produced an exquisite play, and has clothed it in lovely and fascinating form. Withal, it has a philosophical significance and mystical background. It is entitled "Lex Noces Corinthicane" (The Corinthian Weddings), and was given recently at the Odéou, in Paris, before a brilliant audience of academiclans, artists, and men of letters.

The plot is rather shadowy. It tells of love and religious conflicts in the days of dawning Christianity and final phases of Grecian paganism. Appropriate and vague unisc has been composed for it, and it is pronounced us, on the whole, the most artisic literary-framatic event of the season. Jules Lemaitre, the leading "Impressionist" critic, who is France's opponent in political matters, reviews the drama with great symputly and admiration, and Catulle Mendes, a prominent critic and novelist, pronounces a fervent culegy upon the work as one combining gentle tolerance, a love for the chicin list of Christianity, with an appreclation of what is finest in Grecian mythology and religion. Briefly, the story is no follows:

Hermas, a citizen of Corinth, hos a wife, Kallista, and daughter, Daphné, who have been converted to Christianity. He has remained a pugan himself, the new fasth penetrating the houses largely through the more revpousle and encoincal sex. Daphné is in love with a youth, Hippias, to whom she is formally affianced. But Hippias is also will a pagan. The situation invites discord, but things continue to be fairly harmonious owing to the fact that Daphné is not really an ardent and whole-souled convert. She is a Christian through meckness and submission to be mother. Kallista falls il and apprehends the approach of death. She prays for recovery, and vows, if the God of her new faith should answer her prayer, to consecrate her virgin daughter to the service of Christ. Daphné protests against this vow, but it is too late. Her mother recovers, and the pledge must be

Hippias returns, and Daphné, more in love than ever, revolts against the sacrifice imposed on her by the new religion, and a spiritual struggle ensues. Kallista is not selfish. It is for the sake of the faith, in the hope of converting ber husband dmany others, that she values her life. But the daughter loves the world's joys better thms also does the consolations of religion. A year passes. Daphné retires from the world and becomes the "ride of Christ". The Archibishop Thiaghsis is consulted by the mother, and she is told that the Christian God accepts only absolutely columnty ascrifices.

Accidentally Daphie meets her formet lover. Her peace and resignation are at un end. She can not resist her lower native. She regrets the attractive human gods and goddesses of her former faith, and complains of the "sorrowfin God who is pleased by suffering." She determines to forsake family and religion and join her lover in flight. This is the does, but remorse, fear, and doubt cause her to take poison on the way. She dies in her lover's arms just when the archibishop hastens to release her from the bond and restore to her the freedom to enjoy earthly happiness.

Jules Lemaitre, who gives this brief summary, adds that this is a drama which must have troubled thousands of divided families in the cra described, and that Anatole France's gentle and aphilosophic nature enables him to understand both religions and the conflicts their collision necessarily cause. Of the play he says:

"I find it a masterpiece. I find in it a vital interest in history, an ample sympathy, a delicate act. The action is simple, grand, poignant, and the essential states of mind produced by the conflict are admirably represented. Daphate is a figure of charming and significant truth, her leart and imagination still pagan, but her affection and tenderness won over by the cult of Christ, Annote France has loved these creatures, and we all love them. a religion whose God it was said to love and serve, but in the service of whom there was consolation for suffering souls."—

# SCIENCE AND INVENTION.

#### A NEW THEORY OF HEREDITY

That heredity is purely a phenomenon of growth, dependent on the assimilation of nontrishment, was asserted by Dr. Felix Le Dantee in a recent lecture at the Sorbone, Paris, printed in the Revue Scientifypu (March's). The speaker deprecated what the believed to be the prevailing tendency to make heredity a mysterious force, and asserted that the famous germ-plasm theory, now a widely accepted, is misleading. That a ben's egg should develop into a hen instead of into an elephant is no more remarkable, he asys, than that a small chicken should grow into a large one. Both are instances of simple growth, and a detuched bit having the power of assimilation must necessarily grow into the likeness of its parent. Why this particular attached bit should possesse this power, however, would seem to remain something of a mystery, despite Dr. Le Dantee's disclaumers. He says, in part:

"When we speak of heredity, we generally think of a mysterious force, guilty of all sorts of crimes against the individual and against society, and ruling the lives of men and animals by a sort of terrible fatality.

"But this is an injustice analogous to that which would be done by a person who, inheriting a million on condition that should pay out of it an annuity of yoo francs to un old servant, should forget the million and continually complain of the expense of the annuity. Each of us has certain faults to find with heredity; that we must not forget that it is the accumulated gifts of heredity that have made men of us, and that altho we ove to our parents perhaps a certain nervous nifection, a tendency gout, or the like, we also owe to them all our organs, our legs, our arms, our eyes, our thinking brain."

M. Le Dantec notes that the primary problem of heredity is the explanation of how a man, with his sixty trillions of cells-each occupying its own place and having its own characteristics - can be produced from an egg as large as a pinhead. Thus the first investigators tried to discover something in the reproductive elements from which the future organism might grow. They imarised a microscopic man, a homuneulus: and the only quarrel was about whether this was present in the male or in the female element. But, M. Le Dantec remarks, even if such a thing had really been discovered it would not have helped things. Besides it takes no account of change in growth. If the infant grew into a man simply by enlargement, it would become a monstrosity, Growth is change, and takes place by assimilation of nutriment, which is really the chief phenomenon of life. The transformation of food-substance into the substance of one's own body and none other-that is the great mystery of life. According to M. Le Dantec it is precisely the same process that we have to do with in explaining the change from egg to animal. Assimilation, he asserts, involves heredity. He says:

"A piece detached from a living being, and capable of living by itself, manufactures its own substance and takes progressively the form of the being from which it was removed, since the same substance necessitates the same form. And living beings are divided into two classes: (1) those of which any part whatever is capable of living by itself, that is to say, of assinilating after being detached from the parental body (for example, hydrae, etc.); (2) those of which a detached part can not live separately, as with the higher animals and man. But altito in this latter class an arbitrarily chosen part can not live when detached, there are, unevertheless, special elements capable of ascitucive elements. A reproductive element, therefore, is, by definition, an element that differs from the other bodily elements in the productive elements.

"Another definition, and a very different one, is in general use at present, because it has been sought to derive conclusions from the study of man alone. This definition endows the reproductive elements with mysterious power, and makes them essentially different from the other tissues of the body, in tim, the whole body is in some way represented within them, something like the 'homenclus' of the old writers. This theory of a 'germ-plasm' seems to me erroneous and harmful. An egg is simply a bit of substance that can live separate; from the moment when it can live—that is to say, assimilate—the growing mass of substance that from its activity necessarily takes on the forms that lead it to the form of its parent. . . . A piece of a man that is able to ussimilate must assume many is form.

This involves, M. Le Dantec asserts, not only the inheritance of general but of individual characteristics. It also admits of the unbertiance of acquired characters. This would not be the case, he points out, if assimilation were the only possible phenomenon of living substance. The converse process also continually takes place, and the superposition of the two may bring about variation in the nature of the substance; in other words, heredity may be modified by education.—Translation mode for The LITERAC PLOST.

### A DISGUSTED INVESTIGATOR.

F the daily papers are to be trusted. Prof. Jacques Loeb of Chicago University, whose discoveries and theories in biology have come prominently before the public of late, resents the quality and quantity of the notice that has been bestowed by the press on his work, and has expressed his intention of going back to Germany, the land of his birth, where he can work in quiet, Possibly Dr. Loeb's friends of the daily press have misrepresented him in this respect no less than in the matters about which he is said to complain. The American Inventor, however, takes the report seriously and devotes an editorial to it, pointing out that autoying as sensational misrepresentation in the press must be to a conscientious investigator, it is something that can not be controlled in a free country, and at any rate it is a sign that there is a certain kind of public interest in scientific discovery. By proper guidance, this may develop into that form of interest that will raise American research from the low level that recent writers tells us it now occupies. Says The Inventor:

"Dr. Loeb is a German, but an American citizen. He is going back to Germany, where he will not be 'beset by a greetly public which gets its expectations up too high as to what certain lines of scientific work mean." In other words, Dr. Loeb does not notice American newspapers, does not want publicity, does not like to be talked abut, and, above all, does not like to be written to. Poor Dr. Loeb! You should have selected the Sandwich Islands. The Desert of Sahara, or a peak in the Alaskan Mountains if you wished to escape the lime-light of modern publicity. It is very

"All of this is more or less by the way. The American people are andoubtedly without reverence. "Tis true, 'tis pity ; pity 'tis tis true. ' We don't understand this desire to hide one's light under a bushel, and the American newspaper office is not the birthulace of abiding respect for individual eccentricules. At the same time, while it is undoubtedly the correct scientific spirit to desire one's discoveries to be given to the world in a dignified manner and through a dignified medium, it does appeal to even the superficial thinker as strange that a man of Dr. Locb's mag nificent attainments and education should not be able to rise above such comparatively petty annoyances and that such a man should give cause to these same obnoxious newspapers to make him ridiculous. The press is industriously spreading the report that every letter sent him about his discoveries is taken as a personal insult and a separate and distinct prick in the thin epidermis of his scientific pride.

"While we have no doubt whitever that this is all more or less an exaggeration, it is nevertheless true that Dr. Loch has expressed himself in rather prevish terms of complaint about one of our national institutions, and has mistaken for irreverence and dilde currosity what is really the innate desire of the native American to know "what is doing" and to keep abreast of the times. No reader of the newspapers accepts the statements as in variably and strictly accurate, particularly in scientific matters, and any of those interested, and their name is Legion, will at once seek the columns of that scientific journal which the eminent Chleago investigator may select in order to learn the exact truth.

"The whole thing is more or less a tempest in a teapot, and it is to be hoped that Dr. Loeb will reconsider his hastily expressed intention of leaving America, and accept our newspapers and their dire publicity as inevitable and our Chicago enterprise for what it is worth and in the way it is meant."

# COMPRESSED BRICKS OF FUELS AND ORES.

NE of the most important steps ever made toward the utilization of waste material is the compression into small bricks, or "brighetes," of waste fuels and ores that have formerly been thrown away because they are so fuely divided as not to be usable. This has grown into a profitable industry. In an article about it, contributed to The Engineering Magazine (March) by William G. Irwin, we learn that the processes involved were first brought to perfection ultracal. Says this writer:

"For many years the briquetting of mineral fuels has been carried on extensively in Europe, and the first attempts at briquetting mude in America were contined to similar lines, However, it was not long until the idea of applying the same process of other minerals was evolved, and as a result the briquetting of fine mineral ores has, through the experiments of the past six or eight years, come to be an important feature of metallurgical brackly.

"While the brignetting industry as carried on in continental Europe and in England is still almost wholly applied to the brignetting of mineral fuels, three distinct fields for this important economic industry have already been exploited in the United States, i.e., the briquetting of coal and coal dusts, lignite, and other forms of mineral luck, along which lines the industry was first exploited in burope; the briquetting of fine orea and fine dusts; and the briquetting of precious mineral ores. The attraction of the control o

More than a hundred patents bearing directly or indirectly on briquetting processes have been issued by the United States patent office, the writer tells us; but aithe the first of these dates

BRIQUETTING PLANT OF THE HALL MINES SMELTER, NELSON, B. C. Courtesy of The Engineering Magazine (New York).

from 1872, the first plant was not installed here till 1885. This was near Philadelphia and was for the briquetting of anthracite culm. One of the principal processes now used is that invented by B. G. White, in whose machine lime is employed to bind together the dust in briquetting ores, while pitch or other vegeable matter performs the same office with fuel. The materials to be briquetted are fed automatically into the press, and the binding material, which has been separately mixed in a "slacker," is introduced at the same time. In another system, the Corning, the coal is reduced to a pulp by being passed

through powerful crushers before the binding material has been added. The mass is then carried to a furnace where a temperature of from 180 to 200° F. is maintained, and is thus heated sufficiently to make the binding material adhere firmly. Bright quettes made by this process are said to be almost smokeless and

WHITE BRIQ LITING PRESS.

Courtesy of The Engineering Magazine (New York).

to possess superior qualities of toughness and density, retaining their form long after they have become incandescent and reduced to a white ash. Says Mr. Irwin further;

"Considering the fact that England and the Continent now produce nearly 20,000,000 tons of fuel briquettes annually. largely from waste slack coal which otherwise would be useless, some idea of the importance of the industry there will be gleaned. Already fuel briquettes are being exported from Europe to several South American countries, where they sell as high as \$8 to \$9 per ton as against half that sum paid for American coal. The field for the fuel briquetting industry is, indeed, a wide one, and the near future is certain to see the millions of tons of waste coal refuse which has collected about the mines of the anthracite and bituminous coal-fields turned to a commercial value through this new industry. Among the advantages of the fuel briquette is its freedom from dust when handled. For marine purposes, briquettes possess the advantage of storing a greater amount of heating power in a much smaller space than is the case with ordinary coal. Tests made of this compressed fuel on railroads in the Western States have been very satisfactory, and the same flattering results have been obtained through long tests conducted in mills and factories."

This process may also, in the near future, become very important to the iron industry, the writer thinks. He notes that the supply of Mesaba ore in lumps large enough for blast-furnace use is decreasing. The large furnaces, and the economical proccesses that they make possible, will be successful only so long as there is large lump ore. At the same time the loss from these furnaces in the form of dust is very large. Says Mr. Irwin:

"In view of this state of affairs, the present blast furtures conditions present a most serious question, and one which is new receiving the thin the present of apperts as synthete. The question involved means either the abandonment of the monster modern blast-furnaces or the adoption of briquetting as a relief to present conditions. By this method the fine rote are prepared in solid form before being charged into the furnace, and the fine flue dusts, through a process similar to that involved in treating precious-mineral flue dusts, are to be recovered and turned into use in forms of briquettes."

Do Fowls Spread Diphtherla?—Lately, the question has been several times seriously raised as to whether certain infectious diseases can be communicated to the human race by the agency of animals and birds, Says The Medical Record

(March 15): "The declaration has been made that cats can disseminate both scarlet fever and diphtheria to men. Now the suggestion comes from a remote part of Wales that there may be some connection between a disease which is frequently epidemie among fowls and known as roup and diphtheria. According to The Sanitary Record, January 23, Dr. Herbert Jones, medical officer of health to the Rhondda District, when investigating fresh outbreaks of diplitheria, in different localities, found that in several instances there had been, immediately preceding and running concurrently with a diphtheria outhreak, a very fatal epidemic among fowls. A bacteriological examination was, in three cases, made of material obtained from the throats of fowls but without any satisfactory results following, in so far as determining the question of direct infection is concerned. 'Some diseases of fowls, such as roup,' Dr. Jones proceeds to say, 'are so very contagious, and the symptoms so very much resemble those of diphtheria, that there may well be some connection between the epidemic among the fowls and the outbreaks of diphtheria we have so frequently had in our midst during the past few years. In considering whether any practical steps could be taken in the light of the possibility indicated, it appeared to me that it might be advantageous to circulate among poultry-keepers a description of the fowl disease, with instructions how to deal with affected birds,' The fear of disease being directly communicated from fowls to man is one so far remote as not to be worthy of serious consideration. However, for the sake of the fowls themselves, and in order to keep up the supply of so succulent and nutritive a food as chicken, it is well that breeders should know how to treat a disease of the nature of roup.

### "THE BUILDING-STONES OF EVOLUTION."

'HIS is the name that Prof. H. W. Conn. of Weslevan University, gives to the variations from type upon which, according to the theory of biological evolution, natural selection depends for its action. Dr. Conn begins his article, which is

published in The Independent

(March 20), by reminding us

of the universality of varia-

tion. No two children of the

same parent are precisely

"But, altho there can be

no question concerning this

simple statement, it appears that there are two manifest

possibilities as to the relation

which these variations may

have had in the making of a

new species, two possibilities which involve very different

conceptions of nature and of

"A crude illustration may

make the matter clear. Iu

making a stone building, the

builder sometimes makes it

out of rough stones which he

may pick up at hazard. When

he does this, the erection of

the structure begins with his

evolution.

alike. He goes on to say:

B . F B

4. The foot of a hog, showing four separate loss.

B. The foot of a bog in which the third and fourth tors are fused together so that the animal has only

three toes. Courtour of The Indebendent (New York)

picking out the stones, plaeing them in position, and eementing them together. To explain such a huilding there is no need to account for the shape of each stone, since the shape of the stones had no connection with the shape of the building. In another case the builder makes the structure out of hown stones which have been shaped for the building. From a large pile of such stones he selects those which are made to fit each place in the structure, and every one proves to fill its position exactly. To explain the erection of such a building we must go farther back than the point where the builder selected from the stones brought to him those which were evidently made for their respective places. Other men have been at work beforehand and have hewn the stones into such a

shape that they properly fit their places in the structure. The forces which shaped them must be explained as well as those which selected and put them in position.

A somewhat similar conception, Dr. Conn goes on to say, may be held in regard to nature's method of building species. The

facts may be interpreted in two ways. According to one, which is that of Darwin, new species have arisen by slow accumulation of the ordinary minute variations, such as those shown in the illustration of eggs of the sparrow. According to the other, they are the results of larger occasional variations such as those shown in the illustration of the hog's foot or the butterfly's wing. Dr. Conn. remarks:

Two specimens of the same butterfly A is the common form : H. without the eve-spols, is an occasional variation

"New species may have been derived from older ones by slow stages, by the

Courtesy of The Independent (New York) gradual accumulation of such minute variations as we see all

around us in every animal and plant, and which are so universal as to lead us to say that no two animals are alike. On the other hand, they may have arisen by the ordinary process of reproduction, but by suddenly starting into existence in the form of one of the large variations, like a solid-toed hog, which would start a new race at a single birth.

"It makes quite a difference in our conception of nature whether we find the one or the other of these methods to be the true one. If the first method is true, the building of a species is like the construction of a building out of rough stones. The origin of species would then begin with the selection of some of these accidental slight variations, and Darwin's famous law of natural selection would appear to be sufficient to explain them. If, however, the latter should prove to be true, it would be more like making a building out of stones already shaped to fit the plan. Such great variations, so firmly fixed in the nature of the animal as to be transmitted generation after generation by heredity, are more than accidental differences in size and shape, or length of toes or wings. They are even from the beginning fitted to the life of the individual, and perhaps already adapted to conditions, and may form the corner-stone of a new species,

"While we need not ask for the reason of the shape of every stone that goes into a structure built of rough stones, we must explain the reason for the shape of peculiar stones which are fitted to their positions in the structure. Such stones demand an explanation which precedes their selection for their positions, So it is that we need not ask for the cause of the miscellaneous minute variations in size or shape which we find all around, and if species have been built out of such variations we need not try to go deeper than selection to have the satisfactory solution of the origin of species. But if species have come by sudden large

variations, which from their first appearauce start new types, and are at the outset adapted to their conditions. then we must look deeper than simple selection before we shall have explained the origin of species. We must ask, What

EGGS OF ENGLISH SPARNOW, SHOWING VARIA-TION

Courtesy of The Independent (New York) produced such sud-

den departures from the ordinary line of inheritance and started the new line of descent?

"Hence it is that naturalists are trying to determine which of the two methods of variation has been at the foundation of the origin of species, and in doing so are studying, sometimes unconsciously, a deep philosophical problem. They are trying to decide whether selection is to be regarded as a primal factor in the origin of species or whether the real solution lies far deeper and is obscured in the still unfathomable mysteries of life.

# WIRELESS TELEGRAPHY AND ATMOSPHERIC STRATA.

THAT an electric wave, spreading in all directions, should yet retain sufficient intensity at its front to affect an instrument two thousand miles from its source has seemed to most persons little short of miraculous. A recent suggestion by an American electrician, Dr. Kennelly, furnishes an explanation. According to him, the waves do not spread out at all, but are confined between sea and sky, as between the walls of a speaking-tube. The same consideration shows how the waves follow around the curvature of the earth. As all electricians know, conducting substances reflect the waves, whereas non-conductors are transparent to them; and Dr. Kennelly shows that the upper state of the introduced conductivity. Says The Electrical World and Engineer in discussing this point elditorially.

"From the earliest days of wireless telegraphy the manner in which etheric waves of the Hertzian order are transmitted through the atmosphere has been a subject of lively interest, By some it was held that unless a portion of the terminal antennæ projected above a plane tangent to the earth midway between stations transmission was impossible, and some experiments made in Belgium to test this assumption were held to have verified it. One result of the recent brilliant experiments of Marconi has been effectually to dispose of theories which considered the height of antennae a definite function of the distance between stations. Dr. Kennelly points out that reasonable grounds exist for the assumption that in transoceanic wireless telegraphy the waves in their course are reflected on the one hand by the electrical conducting surface of the ocean and on the other by the surfaces of upper atmospheric strata, which latter, by virtue of their rarefaction, approach sea-water in conductivity. The deduction from this view is, therefore, that the curvature of the earth plays no important part in transoceanic wireless telegraphy; that the propagation of the signaling-waves is cylindrical, and that the attenuation of the effective waves is in simple proportion to the distance traversed by the waves.

"The figures given of the conductivity of rarefied strata are most interesting in view of the claims that have been put forth as to the possibility of utilizing the upper strata of the atmosphere for the economic transmission of electrical energy in large quantities. Such claims have been vague as to the height of elevated transmission termini-in fact, merely specifying that they should extend into the rarefied atmosphere. According to rigures given by Dr. Kennelly as deduced from data determined by Prof. J. J. Thomson, at a height of from 45 to 55 miles above the surface of the earth, the conductivity of the atmosphere for low-frequency alternating currents is about 600,000 times less than the conductivity of copper. As to the conductivity of atmospheric strata at an altitude of but a few miles, we do not think its value would be of an order to eause the engineers of a Himalayan transmission project to fear that measurable shunts of energy would occur across high-voltage pole-line conductors. Indeed, one of the mountainous regions of the world would furuish an ideal field for a test of the upper-strata transmission of power theory; for if not successful there, we could hardly hope to attain a sufficient altitude for the transmission termini in habimble regions of the earth."

Cheese and Tuberoulosis,—Tuberoulosis may possibly be communicated from cheese, if we are to believe Baron Henry of Anchald, who writes on the subject in the Journal of Agriculture Pratique. If Dr. Koch's idea that tuberoulosis can not be communicated from animals to man be correct the experiments described by M. d'Anchald do not bear upon the question; but

most of us would prefer to take no chances. Writes a reviewer in Cosmos (March 1):

"Cheese made with tuberculous milk is more dangerous than the milk itself, for altho we may destroy the germ in the latter by boiling, it persists in the cheese and lives there for mouths. . . Cheese was made with milk in which tubercle bacilli had been placed. . . . With specimens of these, guinea-pigs were inoculated and the animals were found to be infected. The toxic effect remained from eleven to fourteen days. This last statement is somewhat reassuring, since cheese is generally eates not less than four months after its manufacture. The same experimenter, however, chose some fresh cheeses in the market at Berne and found that more than half communicated tuberculosis to guinea-pigs. This is a more serious matter. . . . Fortunately, displeasing as it may be to the pessimists, our organism is generally able to defend itself against germs, so we may continue to eat our brie and camembert. That everybody may be satisfied however, L'Industrie Lartière advises its readers to pasteurire all milk, no matter for what purpose it may be intended. But who shall guaranty that this pasteurization has been carried out before the manufacture of the choose, even if the prospectuses announce it? And, besides, what will be the quality of these upto-date cheeses,"- Translation made for THE LITERARY DIGEST.

#### DAMAGE DONE TO TREES BY ICE.

SO-CALLED "icc-storms," in which great damage is done to trees by the weight of the frozen ratio on their branches, are common in many parts of the United States, notably in New England. The storm of February 21 of the present year seems, however, to have been nunsually widespread and to have rained trees in places where this kind of injury is seldom done. In Fasestry and Irrigation (March) Herman II. Chapman writes as follows on the subject:

"To calculate the forces which caused such destruction, a number of twigs were cut transversely and diagrams made of the thickness of the twig and the ice incrnstation. The roe is of about the same weight as the wood of a green twig. Calculating from the relative area in cross-section, it was found that twigs one-eighth of an inch thick were carrying from thirty to forty times their weight of ice, those one-fourth of an inch thick twenty times their weight. And those one-limit of an inch thick twe times their weight. While the exact calculation would be rather difficult, it is safe to say that branches one-indth thick were called upon to support a weight over ten times as great as usual, and possibly twice as much.

"In addition to this enormous burden, the surface of the crown or brunches was increased over fivefold, thus multiplying the effect of the wind by that factor. The wonder is that any limbs were left.

"Forest trees depend very largely on one another for protection from such unusual conditions. Where the trees grew thick and undisturbed, the protection from the wind was so complete that much fewer and smaller branches were broken; but where man had stepped in and 'improved' the woods, by cutting out the underbrush and saplings and leaving only the 'grand old trees in their majestic beauty,' nature took especial pains to point out the error of his ways, and most of these grand old trees are now more fit for scarecrows than for shade. That wind and ice are not the only enemics that 'improving' gives a chance was shown by the fact that nearly all the hmbs broken off showed rot in their interior. The drying soil, the grass, and the exposure following thinning had already gotten in their deadly work, and it needed only the storm to reveal it. If man wants a park, let him keep the whole wood, or raise a new one. 'Improvements' are seldom accepted by nature."

"THE Races of Ecrope," by Prof. W. Z. Ripley, of the Massachosetts Institute of Technology, and professor-elect of economics at Harvard University, has been "crowned" by the award of the Bertlino prise of the Paris Authropological Society, as is announced in The Phyllar Science Monthly.

# THE RELIGIOUS WORLD.

#### -

# THE MODERN NOVEL AND RELIGIOUS FAITH. MANY students of current fiction have called attention to

MAN students or current netion have called intention to the prominence of the religious motive in the novels both of this country and of England. The fact that the religious novels of smost widely read and discussed during our generation have been almost invariably novels of "heresy," inculcating doctrines directly in conflict with conservative religious thought, leads an English writer, Miss Jame H. Findlarer, to inquire how far it is true that this kind of reading undermines religious faith. "It is a pity," she says, "for a nation to be priesviriden, to accept its beliefs too childishily from the hands of even a learned class of me; but it is a much greater pity for a nation to give itself over into the hands of movelists for religious instruction." She continues (in The National Review, March):

"It is a characteristic of youth that it must always be in a state of revolt from anthority when in its period of growth; a necessity seems to be laid upon it to reject every dogma it has been brought up to believe, and to turn to new guides. The influence of religious novels on such readers is often very profound, and very helpful for n time. Later on they may outgrow these teachers, but in the 'present distress' they afford comfort and guidance. They see all their doubts and despairs reflected here, and take courage. Others have passed the lions. The House Beautiful may yet be ahead, and the Delectuble Mountains mny be gained at last. But the benefit of religious fiction to half-educated renders is much more questionable. The book which may comfort the doubter may easily torment the man who bas never begun to doubt. He is presented in an easy, readable form with a sort of digest of modern thought, more or less convincingly put. These ideas are hopelessly at variance with the creeds of his childhood, yet time and opportunity both fail him to examine into their truth or falsehood. Such are the inevitable and melancholy results of cheap education and cheap cultureone more illustration of the truth that 'a little learning is a dangerous thing."

"Now to meet this hunger for help and truth and gnidance, which is such a real want just now, only a few really good religlous novels have ever been written. You might count them on your fingers. The number of indifferently good ones is countless, while of sorry trash there is no end at all.

The writer selects as types of the great religious novels of our age George McDonald's "Robert Falconer," "Mark Rutherford," Mrs. Humphry Word's "Robert Eismere," and John Lane Allen's "The Reign of Law," The first-named author she treats as the spokesman of the earliest stage of doubt in the young thinker's mind-the stage in which the attempt is made to reconcile the justice and omnipotence of God with the origin of evil or with the theory of an after-state of punishment. Mrs. Humphry Ward's famous book, as all the world knews, deals with the question of miracles and the divinity of Christ. "Mark Rutherford " and John Lane Allen are known as the exponents of agnostieism in fiction, the former voicing a "melancholy incertitude," the latter prophesying that ' our religion will more and more be what our science is, and some day they will be the same," Miss Findlater sees in all these writers and their novels a reflection of "the general course of doubt as it rises, grows, and takes possession of the human mind." She comments:

"When you consider that each one of the authors whose books I have considered is only the leader of his or her own especial band of imitators, some idea may be obtained of the ramifications of religions fettion. Not a doubt but has its special pleader: not a new faith but bas its prophet. And the newer the faith, he poorer the book that is profused by it. One has some patience with the old classic doubter, with his gennine scruples; and with the utmost againty replace it by means of electricity or vegetarianism, theosophy or Christian Science, can not hold our sympathics. It is illiberal and perhaps unfair to say that the

new is never true; but for the purposes of serious fiction it is a sasfe ratic to keep to the old paths. No lirand-new ideas can be the right material for building a book of. The stirting, testing processes of time are needed to make ideas into usuble book stuff, just as wood needs seasoning before it can make a seaworthy eraft. The stirrinkage of ideas has to be ultowed for—what seems to fill the public mind and dominate knowledge one year, may have shruk into insignificance before twelve more months have run. This view of things, if practically adhered to, leaves rather a small field for the religious novelties of the future. The stories have all been told '—an eminent authority tells us; certainly the doubts have all been expressed. Perhaps a true may be called now—it is time—but the War of Opinions will still go on."

# NEW YORK'S REJECTION OF THE PASSION PLAY.

SACRED drama entitled "Nazareth" was presented at the A Garrick Theater in New York on March 23 by twenty-four members of the "Lambs' Club," with a musical overture and four intermezzos composed for the occasion by Henry K. Hadley. The "Lambs' Club" is largely composed of actors, and the performance was a private one, given before three hundred members of the club and their friends. "Nazareth" was written by Clay M. Greene, and was produced, for the first time a year ago by the students of the Roman Catholie College at Santa Burbura, Cal., of which he is a graduate. The important personages of the Gospel period are introduced and the playwright himself impersonated Andrew, one of the twelve apostles, in the New York performance. No attempt is made to portray the visible person of Christ in "Nazareth," but his presence is indicated in the most important scenes. In the trial scene, Christ's proximity is conveyed to the mind of the spectator by the theatrical device of a bright light thrown from the side; and shadows thrown on a transparent curtain make a picture of the Crucifixion. "The drama," observes the New York Herald, "was performed by an exceedingly capuble cast, and was elaborately staged," It continues:

"The first chapter of 'Nazareth' showed a scene in the conneilchumber in the bouse of Caiaphas, the High Priest, on the first of all Palm Sundays, during Christ's entry into Jerusalem. The action of the second scene was on the Mount of Olives, overlooking Jerusalem; the third, in the judgment-hall of Pontius Pilate, and the closing lephaptr on the road to Caluvale.

"Through these last days and profoundly tragic events in the life and death of Christ, he was seen only through the eyes of the twelve disciples, the Roman soldiers, and the street crowds; but the intimate suggestions of his presence and participation were impressed with great dramatic skill.

"The performance was received with much enthusiasm, and with all the scriousness demanded by the ambition of the theme, which was interpreted without a flaw of possible offense.

"The leading characters in Mr. Greene's drama of Holy Week became Pontius Pilate, portrayed by A. S. Lipman; Judisson scariot (Joseph R. Grismer). Matthew (Harry Woodruff), Peter (Henry R. Roberts), and Calaphus (Nathaniel Harwigs). The story followed closely the narrative of the gospcis in the important incidents.

The rumor was printed in the dnily papers on the day following this performance that New York theatrical managers were
seriously considering the presentation of a Passion Play; and, in
view of the fact that a Freneh Passion Play is at present being
performed in Montreal before commons andiences and with the
tact consent of the clergy, the report was widely credited. Public
sentiment in New York, however, proved to be so hostlic that
the plan was at once abandoned. "I think the production of a
Passion Play here would be ill-adviced and unfortunate," said
Blaop Petter, when approached on the subject; "the objections
to it seem to me to far outweigh whatever advantage it may
possess." In more emphatic language, Archibishop Corrigan de

clared: "To produce the Passion Play in this city would be to degrade the most holy of things. I voice the sentiments of the entire Catholic Church when I say that the mere suggestion of such a play is revolting and should meet with opposition at its conception."

The New York Nur recalls the fact that about twenty years ago SaImi Morab brought his "Passion Play," to New York from San Francisco. It was a fine production and cost \$\$\phi\$,000, James O'nelli impersonated Clirist, and in the cast were Lewis Morrison, James A. Herne, and others since conspicuous. During mes A. Herne, and others since conspicuous. During the three weeks in San Francisco large audiences were drawn, but the leading actors were arrested every day and finel \$\$\phi\$ o each. At last the covernor of California rook unbulbitive action.

The New York Journal thinks that "ignorant peasants may innocently enough portray in their gross and clumsy fashion the sufferings of Christ and those who followed him." but that actors or managers attempting it in New York "would be mobbed and would deserve to be mobbed." The New York Evening Post Savs:

"If there were not many other good reasons for this ' Hands off ' to pushing managers and sensational playwrights, the offense which such a performance must give to all truly devont souls would be a sufficient cause for discouraging this proposed revival. It should be realized, too, that the life of the great sufferer for humanity was essentially undramatic. Its moral beanty was expressed often in passive endurance, at most in words or in slight intimate action which can not be adequately represented under the conditions which bind the actor. As soon as the touching episodes of the Scripture are put upon the stage, all the nonessentials are exaggerated for spectacular effect, and what was insignificant as regards religion becomes positively bad as regards art. It is the possibility of great spectacular scenes to which morbid curiosity will drive the public, and about which the sentimentality of the pious can be made to furnish infinite free advertising-it is this which stirs the imagination of managers to whom a crucifixion and a ballet are equally 'drawing features.' The dubious success of a few closet dramas, which have touched lightly the life of Christ, should not blind any one to the fact that any dramatization of the Passion is inevitably, under present conditions, a vulgarization of the supreme act of the most revered of lives. We can not believe that any manager, Christian or otherwise, will wish to revive the Passion in such form as must infallibly recall Judas, who sold his Lord for thirty pieces of silver."

Of the Montreal Passion Play, which is now being presented without hindrance, and in which the person of Christ is directly introduced, the New York *Herald* says:

"The immense Prench National Theater in St. Lawrence Street, where the performances are being given is, constantly crowded with thousands of spectators. So far, Archibishop Bruchesi has not spoken on the subject, but scores of institution, directly or indirectly under his control, are attending the production in bodies.

"The play has been referred to at length in many of the pulpits, and there has yet to be lead a word of condemnation. The play is in French, but English-speaking people are equally auxious to be present, and never in Montreal have so many persons sat through a play without the slightest idea of what words were being spoken, but yet were completely overcome by the remarkable acting, seenes, and situations, that in themselves suggest the dialog. It is no uncommon thing to see half the audience in texts during the Crucifision seene.

"Since the piece was first presented there have been a few changes in the cast, and it is now composed almost entirely of French-Canadian actors who have had experience in France or the United States. There were several old-country actors, but at the end of last week they fell out with M, Julien Daoust, the proposition, the result being that they got a "Passion Play" of their own and went to Quebec with it. It was a disastrous failure, and has been given up.

"M. Daoust's financial position in the matter is one of the interesting features of the whole story. It may almost be said that he has come from poverty to affluence in two weeks. A struggling actor, playing at the various French theaters in this city, he amounced that he believed that there was money in the 'Passion Play,' and, despite the protests of his friends, he got M. Germain Beauleau, a French-Canadian advocate, to write a two-hour version from the original Ober-Ammergau piece. In a single night success came to such an extent that already M. Daoux's profits are estimated at many thousand dollars.

"In the play M. Daoust assumes the part of Jesus, and his make-up is quite starting. If its eyes are naturally sunken, and physically he is all that history suggests. In many respects the part of Judas is the best fole in the play. It was brought out with much force by M. E. Meussot. The principal women in the cast are Mile. Rhea, who appears as Madelene; Mile. Johanna, a former member of Mr. Charles Frobman's forces, who takes the role of Martha, and Mine. Reid Bedard, who is Mary.

"The aucess of these performances is the more remarkable since all previous attempts to ntilize the story of the Christ on the professional stage have proved so futile. In Montreal, several years ago, when the old theater near the Champ de Mars was running, an effort was made to produce a version of 'The Passion Play,' but it was promptly stopped by clerical disapproval."

### PROFESSOR PEARSON'S NEW BOOK.

DROF. CHARLES W. PEARSON, who recently resigned his chair in the Northwestern University on account of the storm of criticism that was aroused by his public disavowal of belief in Biblical miracles, has written a book entitled "The Carpenter Prophet: A Life of Jesus Christ and n Discussion of His Ideals," in which he still further elucidates his religious views. In the present volume he retracts nothing, but attempts to prove that many of the fundamental beliefs of the Christiau Church can not stand in the light of modern knowledge. "Upon this book," remarks the Chicago Tribune, "Mr. Pearson is said to have been engaged for a long term of years, and there can be no doubt that the ideas set forth in it have gradually taken possession of the writer until they have become a conviction. But many of the chapters appear to have been written recently, containing, as they do apparently, allusions to recent events. . . . The intention of Professor Pearson in writing this book is not that of the agnostic, the pessimist, or the wilful heretic. He writes to reassure those whom the spirit of the time has won from the worship of tradition, as he believes it to be, those who are emerging from 'the mesmeric influence of special education.'" The position taken by Professor Pearson is practically that of the Unitarian. He rejects the miraculous element in the Bible, as well as the idea of the trinity and of transubstantiation; but he affirms his belief in a personal God and in prayer,

Asserting in his preface that he writes to "undermine no man's faith" and to "destroy no man's hope," but rather to "substitute a larger and happier view of life for the narrow and gloomy one of 'orthodox', theology," he proceeds to consider the leading events in the life of Jeaus. From his argument regarding the birth of Christ the following sentences are noted:

"The dectrine of the immaculate conception of Jesus by the Holy Spirit is a figurative way of expressing one of the most important of all truths—viz.: that a pure birth is needful to a healthful life.

"Both Matthew and Luke agree in tracing the descent of Jesus through his father Joseph. This is evident testimony that in the earlier historic period there was no doubt that Jesus was the son of Joseph, since otherwise Joseph's descent would have been altogether unimportant.

"At the Reformation, Protestantism cut down the ranker growth of supersition, but it did not destroy its roots. In leaving the legends about the birth and miracles of Jesus, it retains the germs of every other wild exaggeration of the Acta Sanctorum. The life of Jesus in the Gosyel implies a similar life of the Blessed Virgin Mary, and that, a legend of Mary's mother, St. Anne."

Professor Pearson accepts Jesus in his manhood as a self-

educated, passionate, and self-immolating poet and liberator and pays him eloquent tribute. "Jesus the man," he says, "is nexpressively beautiful and attractive: Jesus the demigod is still a fascinating creation of art; but the Jesus of Athanasius and Calviu and their followers, the angry and pitiless delty, is a revolving conception, essentially and basely pagan." Of Jesus as a teacher the author says:

"There is no trace in the teaching of Jesus of the influence of the dram as such, yet he is akin to Shakespeare in the natural qualities of his mind, in the quickness and range of his observation and sympathy, and in the ease-with which he interpreted the human heart. . . He talked of shepheris and fishermen, of farmers and merchants, of slaves and kings, of stewards and soldiers, of maidens and housewires, of mothers and children, of rich and poor, of sinners and saints, and knew what was in them all."

Prayer, as already stated, commands Professor Pearson's belief. "God is trath," he says, "and does not deceive us." But the thought of the actual presence in the sear-ament of communion he regards as "mere fetishism and magical incantation, infaultely removed from the spirit of the religion of Jesus." Of hell he says:

"There is a hell, the hell of an evil conscience; but Jesus, tho he has delivered many from it, never descended into it. His body descended into the tomb and returned to the dust from which it was created, and his immortal spirit entered into everlanting life, and has uplifted, and will continue to uplift, countless others to sit with him in eternal joy and glory at the right hand of God."

The conclusion of his argument is as follows:

"The struggle for a genuine Christianity free from false philosophy and pagan error has been long and bitter, but the victory of truth and rightcousanes is drawing near. The ignorant have opposed the dead weight of their stupidity, the selfish and active ingenuity of their ambitton, the bigoted, the ferec cruelty of their fanaticism against every social, political, and moral reform; yet, in spite of all, knowledge and freedom have increased.

"We are all descendants of hundreds of generations of pagns. The blood of the cave-dwellers, who thought the thunderbot the dart of an angry god is in our wins. Our nerves still tremble with the superstitions which made altars rese with blood to propijiate the vengeful delities who scourged men with famine and pestilence. And so we still have a fading theology that makes Christ a mediator between an angry God and a suffering race of men and his death an atoning scarfides. But all this is passing away, and we are coming to understand the simple Gospel of plesus, the plain Gospel of purity, love, and service.

"We are not, as some timid persons seem to think, looking upon the sunset of faith, but are witnessing the sunrise of an immeasurably more glorious day, a millennium in which religion will not be an affair of one day in seven in the church, but of every day and every place; in which men will not serve with hip and knee only, not say Lord, Lord, and neglect justice and the only of the control o

Roman Catholic Chaplains for the British Navy.

—An appeal is being made by the Irish members of Parliament,
as yet without success, to obtain the appointment of Roman
Catholic priests as scagoing chaplains in the British navy. They
point out that the there are now some 12,000 Ruman Catholic
sailors in the navy, there is not a single Roman Catholic chaplain
at sea. Two priests serve as chaplains on shore, but their higheat pays is just half of the highest pay received by Anglican chaplains. Says the Loundon Table 10.

"The cruelty as well as the rank absurdity of the thing becomes apparent when we consider what are the respective functions of an Anglican and a Catholic chaplain. To the dying Catholic the presence of the priest means just this tremendous difference—the difference between going into eternity with his sins forgiven or unforgiven. To the dying Protestant his chaplain msy talk consolingly, and that is all,"

The Baltimore Catholic Mirror makes the following comment;

"Appeals to sense of justice count for little with Englishmen in authority, and especially In matters where the demands of bigotry must be withstood. More effective than this is the veiled threat of the Irish hierarchy that if priests are not provided as chaplains, Catholies will be warned against the danger of entering the service. Britain needs men to man her ships and needs Irishmen especially, because on account of Irish industrial stagmation she has more hopes of getting Irish than of getting well-ted English citizens to enlist in the service which is not the only door of opportunity open to them."

The New York Sun cails attention to the fact that the French Government, which has recently abolished the navy regulations making attendance at religious service compulsory, is now suppressing chaplaincies in the navy entirely.

#### IS HELL PREACHED ENOUGH?

I T is generally assumed by exponents of the "New Theology" that the apparently diminishing belief in hell and a personal devil as a thing to be rejoiced over, as marking a new stage in the progress of religious thought. To The Christian Endeavor World (Boston), however, hell is a very real place, and the diminishing emphasis of the church on it appears full of disaster to the "virile Christian preaching that has to de frankly and forcefully with the eternal truths." The same paper goes on to say:

"It should be preached. Because, in the first place, hell exists. The testimony of our Lord should be sufficient on this point. It is reinforced, however, the reinforcement is not needed, by all the evidence of our reason and observation. We see many men growing worse and worse up to their dying day. We see their characters becoming absolutely fixed in evil and impenitence. Often tiley are unconscious of it, but we can see their punishment gathering slowly but surely around them, even in this life. We have no grounds in reasoning or revelation for expecting any change to be forced upon them in another life. Just as, on contemplating the sunset of a noble career, we are irresistibly led to imagine its continuance and increase in glory forever, so, in watching the last days of a bad man, instinctively we paint the picture of eternal wo. It seems reasonable to believe in heaven. It is not our reason, but our pity and our horror, that objects to the doctrine of hell,

"In the second place, hell should be preached because millions are some properly of the preached because millions are some properly of the pro

"In the third place, hell should be preached because 'the fear of the Lord is the beginning of wisdom.' The love of God is the end of wisdom; fear must come first. The reason why the church's love of God is often so weak is because it so not firmly founded upon respect for His authority and awe at His majestic power. Sinners must be made to feel the terrors of the law, before they will appreciate the graces of the Gospiel.

"In the fourth place, even Christians need to be reminded of the peril of hell. We need to see the pit whence we were dug. We need to put more spirit into our daily prayer, 'Deliver us from evil.'"

The church, continues The Christian Endeavor World, will fourtsh only in proportion as men are brought to a "deep conviction of the exceeding sindliness of sin," and its appeal to the sinner should not be, "The church needs you," but, rather, "You need Christ. Without Christ you are ruined for time and eternity." The Boston paper concludes:

"We are not advocating a return to the preaching of Jonathan Edwards, tho there were much salt in that. We do not care to have men fall swooning in our churches, and women half frantic with fear. But we do arge a preaching of hell in the same measure in which Christ preached it, and in the same manner to used.

Soften the dread doctrine with the hope and assurances of the
Gospel. Throw across the very mouth of hell a ray from the
cross. But do not expect to win sinners till you have preached
the whole truth, and testified, as selembly as our Savjor test-lifed, to that terrible alternative, the place 'where their worm
dieth not, and their fire is no quenched,"

The Salt Lake Tribune, commenting on the arguments of The Christian Endeavor World, declares that in reading them "one is irresistibly reminded of the old-fashioned revival." It adds:

"We have all heard the hellfare-and-damnation sermon. We have all listened to the revivalist who says: 'Oh, my unredeemed brethren, the fires of hell are yawning for you. For thousands and millions and billions of years you are going to suffer the scorching pangs of the pit unless you accept salving to to-night, "He that, heing often reproved, hardeneth his neek, shall saddenly be destroyed, and than without remedy,"

"That style of preaching has gone out of date, and one does not have to search far to find the reason. The man who was scarcillate the church—and most of those who listened to such sermons were scarced into the church—and most of those who listened to such sermons were scarced into the church—backslid just as soon as to first frenzy of terror had passed. Unregenerated he remained until the next revisalist came along and once more lashed him to the mourners' bench. The almost absolute unclessness of the bell's-first control of the control of

#### IS DARWINISM ON THE DECLINE?

N OWHERE have the merits and demerits of the evolutionary theory of Darwin and his friends been more holty debated than in Germany, especially in the religious hearings of the theory. So strong has the opposition become both among theologians and naturalists that Professor Ziekler, in the Reveit det Glaubens, declares that Darwhism is on the decline. Ills sustements are in substance as follows:

Notwithstanding the phenomenal success achieved by Charles Darwin in the proclamation of his evolution theory, which spread into other realms of thought than that of natural philosophy, it must be stated that the supremacy of this philosophy has not been such as was predicted by its defenders at the outset. A mere glance at the history of the theory during the four decades that it has been before the public shows that the beginning of the end is at hand. This theory had reached its acme of popularity about the close of Darwin's life (1882), but since that time there has been a slow but sure retrogression. This retrogression assumed the form of a constantly increasing number of naturalists who have come out in opposition, at any rate in opposition to it In its original form. This process of disintegration has already to a great extent undermined the theory and shown its weakness. So great is the difference between the original Darwinian theory and the substitute that is now taking its place that the resemblance can often scarcely be recognized. The biology of the future will practically contain nothing of the one-sided monistic form of the development theory as formulated by Darwin and Haeckel, notwithstanding the load and long protests of the followers of the latter to the contrary.

What is considered by Profossor Zöckler as the best statement of the present status of the theory is given in the recent work of the Würzburg philosopher, Dr. Stölzle, on "Kölliker and his Relations to Darwinism." Kölliker is eighty-four years of age and a vectera nuthority in his branch; but notwitistanding his leaning toward a certain type of Darwinism, especially in his rejection of miracles and of interference with nutral processes, he on all real points of issue is against the English naturalist. Ills opposition to kinleft on these points:

- Darwinism does not explain the connection and harmony of the different classes of organisms.
- Its utility principles do not explain the phenomena for which it aims to account.

 The absence of real transitions of one species to another in our day, or in former days as far as we can trace, is an element of weekness.

In addition to Kölliker, Professor Zöckler gives the views of a large number of German and other Continental naturalists who amagonize the theory.—Translation made for The LITERARY DRIBAR.

# THE "NAMELESS EPISTLE" IN THE NEW TESTAMENT.

THERE is at once an allurement and a provocation in any great book the origin and the authorship of which are uncertain. Many of the most famous books of the world, remarks The Christian Commonwordth (London), have been published anonymously. The "Letters of Junius" still excite discussion as to their authorship. "Waverley" created a great sensation when first issued, and for many months speculation was rife as to the lidentity of the writer. A remarkable proof of the genius of Lord Lytton was furnished by the fact that "The Coming Race," published near the end of his life without his name upon the ittle-plage, uroused such general interest. The Christian Commonwords frontiers.

"The one epixtle of the New Testament which is clouded by the double doubt of origin and authorship is in some respects the most wonderful of the sixty-six treatness which make up the Bible. It transcends all other Serjurus portions in that peculiar clevation which belongs to thought expressed without rhetoric. It is full of pure logic. It is sublime in the loftiness of its immediate ascent into the realm of Deity. The Epixtle to the Hebrews contains the grandest argument extant in application to the pure humanity of the Messiah as exhibited in his sacerdotal office. In no other part of the Bible do we gain so picture-sque an exposition of the typology of Mosaic rituals.

Prof. A. S. Peake, lecturer in Laneashire Independent College and formerly Fellow of Merton College, Oxford, is the celtior of a new volume on the "Epistle to the Hebrews," in which he discusses at some length the various theories of its authorship. "Nothing is so certain with respect to the authorship," he says, "as the negarity conclusion that it was not written by Paul." He considers in turn the claims of Silas, Luke, Clemen, Barnabas, Peter, and Apollos, but without arriving at any definite conclusion. The most curious conjecture is that of Professor Harnack, of Berlin, who suggests that a woman, Priscilla, wave the book; and this theory has found many supporters. Says The Christian Commonwealth.

"We suppose we can never hope to know who wrote the Epistle to the Hebrews. . . . It is, however, not this question of authorship which is of any real moment. Infinitely more important is the matter of date. It is remarkable how unanimous is the consensus of critical opinion that the letter was written before the end of the first century. Even the 'Encyclopedia Biblica' locates its chronology thus. This fact makes it evident that even the most destructive of the higher critics are constrained to spare us this precious section of Holy Writ. If all our great scholars thus allow that the Letter was written in the apostolic age, reassurance may take full possession of every evangelical mind. The book is genuine. No investigator seems even inclined to doubt that the earliest churches were familiar with it. Thus, the epistle which points most vividly to Christ, both in his earthly history and his heavenly offices, is admitted to have been written while many people were alive who were born before his death. Here is an evidence of the truth of Christianity which no infidel attacks can ever shatter.

THE "Gere case" in England has been finally settled. "The new Bishop of Worrester has been connectrated and enthrones, and has entered upon of Worrester has been connectrated and enthrones, and has entered upon casion of the objections to his confirmation have been definitely account of the objections to his confirmation have been definitely admitted by set up." The ceremony was performed a few weeks ago by the third of the objection objection of the objection o

# FOREIGN TOPICS.

# ABANDONMENT OF KING EDWARD'S VISIT TO IRELAND.

THE first result of the abandonment of King Edward's contemplated visit to Ireland is a shower of heated comment that seems little calculated to promote good feeling. Thus the London Times

"The disgraceful action of a portion of the trish members on Monday night has been followed, as we anticipated, by an officlal announcement that the royal journey to the sister kingdom has been abandoned for the present. The King, by the advice of his ministers, has expressed his regret to the lord lieutenant that the visit of their majestles to Ireland can not take place this

A PRICELY SUBJECT.

It is said that the Cabinet decided at their Council on Tuesday not to interfere, at present at all events, with the United Irish League by proclaiming it a "dangerous association." - R'estminster Gazette (London).

year. This decision will cause profound disappointment to the Unionist party among the Irish nation and as we confidently believe, regret no less acute among tens of thousands of Nationalists, who lack the moral courage to express their real sentiments, but who are keenly sensible of the advantages to be derived from the presence of royalty. They must recognize, however, that it is the natural consequence of the flagrant display of disloyalty and seditious feeling in which some of their representatives have chosen to indulge. After such an outburst from men who have been returned to serve in the imperial Parliament by Irish constituencies. His Majesty may naturally and rightly feel that it would hardly be proper that he should honor their shores with his presence during the continuance of the war,

A less acrimonious tone is that of the London Standard, which comments:

"Disappointment may be confessed that circumstances do not permit of the fulfilment of the sovereign's wish and the desires of their loval subjects. But it must be owned that on general grounds the postponement is not wholly to be deplored. A period of political unrest and of greater or less conflict between the public authorities and an agitation which sets aside the ordinary law would scarcely be propitious for a royal progress. Unfortunately, it can not be doubted that, so far as depends upon the organizers and instruments of the United Irish League, there is a settled purpose to promote trouble."

Irish newspapers discuss the abandonment of the visit with warmth. Freeman's Journal (Dublin), the Home-Rule paper, says responsibility for the matter rests with the ministers, not with the King:

"His ministers could not venture to allow the King to see with his own eyes and hear with his own ears the barbarous methods of the Castle and the deep resentment of the people. His presence would have been a sore encumbrance to the coercionists. There was imminent danger that his visit might have converted him to Home Rule or confirmed an existing conviction. Therefore his ministers have in their own interests, and the interests of unionism, forbidden his visit to Ireland "

A hope that "before Lord Cadogan ends a vicerovalty which

has been singularly distinguished by brilliant incidents, the King and Oncen will have visited the Irish capital," is expressed by The Irish Times (Dublin), and The Daily Express (Dublin) savs:

"During recent mouths the English public has been passing through a rapid process of enlightenment as regards the condition of Irish affairs. The announcement which will be made this morning in every newspaper in the country will, we hope, complete that process. The United Irish League, Englishmen were told three years ago by Mr. Gerald Balfour, would speedily fall by its own weight. The Local Government Act, they were assured on the same high authority, would effectively reconcile Nationalists to the bond of union with the greatest empire in the world. Two days ago the English public found this beneficent policy bearing fruit in the cheers of the Nationalists members of Parliament at the defeat and capture of a gallant English general. To-day they will learn that the kindness of the Irish Government to disloyalty and sedition has obliged the King's ministers to dissuade him from his proposed visit to his kingdom of Ireland."

# HOLLAND'S ABSORPTION BY GERMANY.

ERMANY'S alleged intention to absorb Holland was the Grander of a long article in the London Times. A book by the German professor, Ernest von Halle, entitled "Economics and Sca-Power," was the basis of the article. Professor you Halle, we are told, is "one of the ablest of the younger professors in Germany, and advocated the Emperor's views in the actitation for an increase of the fleet." Says The Times corre-

"At this inneture, when the Dutch have been systematically educated to regard the English as their worst enemies, it will certainly do good and clear the atmosphere of continental politics of sundry misunderstandings if attention be called to Professor you Halle's deliberate plea for the incorporation of Holland in the German confederation. This more especially at a moment when Germany is courting the friendship of the United States by Prince Henry's visit. In this connection I may mention as a significant fact that Professor von Halle, while representing the eventual absorption of Holland and all the Dutch colonies by Germany as a matter of course, entirely ignores the Monroe Doctrine, altho there is excellent reason to believe that the United States would never permit Dutch Guiana and the islands of the Dutch West Indies to become German possessions. He does this regardless of the mischief of accustoming public opinion in Germany to such impossible designs and of the danger attending an outbreak of patriotic indignation in the German empire whenever America has occasion to interpose her veto."

The German professor is well aware of Dutch objections, but he has a way to meet them;

"According to Professor von Halle all authorities agree that the large and varied interests of Germany in the Dutch colonies are exceeded by those of no other country. Her trade with those territories is constantly progressing, and is bound to increase still more with the development of German shipping in the East Indian Archipelago. England in particular must yield to us [Germans] the leading position in shipping and trade which she has hitherto held in those regions. It is these circumstances which appear to give real value to the acquisition by Germany of the Caroline Islands and the other adjoining Islands, as it prevents the Dutch colonies from being entlrely shut in by the two great Anglo-Saxon Powers. Holland is conscious of the dangers. which might one day approach her from the Philippines and the Sulu Islands, or from Singapore, the Straits Settlements, and Borneo, and which she would be utterly powerless to avert single-handed,"

The subject is taken up with interest by the English papers, the anti-American Saturday Review (London) saying

"It would be far better for England that the Dutch West Indian colonies should pass into the power of Germany than of the United States. German power can never seriously threaten us in the New World; it may rather assist us; while American pre-

[April 5, 1902

dominance-whether the people have good will or bad will toward us-must necessarily be a source of constant anxiety."

"America announces through Captain Mahan that if Holland is absorbed, her American colonies must be given up," says *The* Spectator (London):

"German opinion is, however, formed by pamphlets of this kind; the derier to absorb Holland, and so acquire ships, colonies, and commerce at a blow, is very keen; and it must be acknowledged that the geographical position of the little country makes the desire of the bigger one quite natural. Germans own the Hinterland but not the coast—a cause of daily irritation."

"The question is not at all new and has already been dispassionately and carefully considered," says the Hamburger Nachrichten, which, in a matter of this sort, is fairly representative of German opinion:

"We have here—apart from the purely academic forecast of Holland's future—the highly comical situation of the English playing the part of protectors to 'Holland in need.' The English are the very ones who for the past two hundred years have pillaged the Dutch in the most shameless way and brought them down from their greatness. In the Cape, as in Japan and formerly in the East Indies, the Dutch have been oppressed by the English now so guiltless, whereast the Prussians in 1787, as in 1817, freely rendered, under Béllow, the aid solicited of them to the house of Orange."

The Dutch papers do not seem alarmed at the prospect, relying, as they do, upon Europe's guaranty of their independence. Such is evidently the attitude of the Nieuws van den Dag (Amsterdam), while the Handelsblud says:

"The writer of the article (on the German professor's book) tells an aneclote that is worth remembering in this connection. Prince Bismarck met the bright Dutch diplomatist, Baron van Heckeren, at a German resort, and asked if the Dutch monarch would like the absorption of Holland by Germany. If so, the Dutch King would be made commander of the German nuswered that the King would not deem that a premotion. However, a good understanding with the German principle is and will remain a necessity to our country. More of a promotion that that we hope to be guarded from throughout the twentich century."—Translations made for The Literary Discovered

## GENERAL METHUEN'S DEFEAT.

I T would be difficult to convey an idea of the plenitude of European comment upon Lord Methuen's defeat and capture in South Africa by the Boer General De la Rey. Methuen's subsequent release by the Boers increases the comment. English papers attribute the affair to "accident" or "ill luck." Thus The Westmarter Gazette (London):

"It may be that the reverse suffered by Lord Methuen is in Its immediate aspects to be explained by the theory of 'sheer illfortune.' . . . Certainly the stampeding of the mules and the confusion which followed are incidents which would tax the resources of the most capable commander, and not less certainly there will be widespread sympathy for Lord Methuen, who for the last two years has won golden opinions by his persistence and admirable courage in a most wearisome task. But when we read the despatches, and, still more, when we look back on the recent course of events in the Western Transvaal, we are obliged to surmise other reasons which will need to be carefully examined. Until the last few weeks De la Rey, who is andoubtedly the most during and skilful of the Boer commanders, had been out of action. Report said that he had been attacked by typhold fever and was slowly recovering. At the end of February he suddenly came to life again and struck the heavy blow at the convoy near Klerksdorp which cost as 630 men killed, wounded, and captured. On March 3, a week after this disaster, Lord Kitchener reported that 'Kekewich and Grenfell's columns are pursuing De la Rev's forces, which are reported to have scattered, and Lord Methuen has started with a column from Vryburg toward Lichtenburg to try and intercept the enemy.' It was apparently in the course of this operation that Lord Methuen suffered his disaster."

As for the impression made upon the English mind by the Boers' release of Methuen, it is perhaps most adequately conveved in this utterance of the London Times:

"In releasing him the Boera are following a general policy dictated by their inability to retain prisoners sexept upon conditions which hamper their own movements to an intolerable degree. It is obvious, however, that the considerations which forbid them to bold numbers of prisoners do not apply to a single prisoner of high millitary rank whom they might have thought it desirable to keep in their hands. We need not speculate on the question whether Lord Methuen would have been detailed had be been unwounded. It is enough to know that in his crippled condition his cuptor has placed humanity and chivary be his conduct. He has refused to take the responsibility of detaining a wounded man at the cost of inflicting upon him the exquisite torture of incessant joilting in a wagon traveling over rough country. We do not know the precise nature or gravity of Lord

A SOUTH AFRICAN PERIL

RUSSIA (to the Emir of Afghanistan): "John Bull has his hands full with the Boers. I'll take the opportunity to wound him in the heel.". —De Amster dammer Weebbild voor Nederland.

Methuen's Injury. But we have been told that his thigh has been fractured, and this points to a condition of affairs which, at the lowest, may become very serious in the absence of rest and surgical attention. In such circumstances the action taken by De la Rey is such as was to be expected from one who has always borne a high character for humanity, good feeling, and enlightemment."

The release of Methuen should lead to the release of Kritzinger by the British, according to *The Daily News* (London), to which *The St. James's Gazette* (London) replies:

"There is no parallel between the cases of Lord Methuen and Kritisinger. The latter is, we do not doubt, receiving all the attention and consideration which the best medical skill can provide in a hospital fundreds of miles from the battle-field. He is on his trial for grave offenses, which if proved against tim can be in no way excused by the existence of a state of war. It is at least doubful whether in addition he is not a rebel instead of a legitimate belligerent. No such charge could have been brought by the Boers against Lord Methuen."

Sympathy with Methuca personally is voiced in the Irish press, Freeman's Journal (Dublin), saying:

"Noboly will refuse sympathy with the captured general, We an not forget that he behaved file a gentleman wer the death of Villebuis-Marenii, whom some other British generals were bleding as a mercenary adventurer. The man who wrote libe letter to the French colonel's brother and raised a memorial over his fallen for is entitled to consideration."

Prench newspapers are critical, but not exultant at the disaster. The Matin (Paris) recalls Methuen's chivalrous treatment of Villebols-Marenil. The Courrier du Soir (Paris) says the most critical period of the war, for England, has arrived. The Journal des Débats (Paris) insists that while the defeat is serious, it can not really change the situation. The Temps infers from the defeut that snobbery reigns in English officialdom in spite of everything:

"Many have alleged that his (Methuen's) social position, his connections, his popularity in society, the chronic snobbery of the War Department, Lord Roberts's liking for well-born and well-related people, have won him impunity for his faults."

The German newspapers of the official and semi-official classes are more or less sympathetic, acting upon instructions, it is alleged. But the anti-English Lokal Anzeiger (Berlin) is not reserved in expressing its pleasure. The Berliner Post thinks Methuen's capacity inferior. The Tageblatt (Berlin) says Methpen's defeat is the Boer reply to England's rejection of peace. The Kleine Journal (Berlin) thinks it a blow to British prestive. The Neueste Nachrichten (Berlin) says the English will now make peace. The Hamburger Nachrichten says:

The moral effect of this latest English misfortune will not be underestimated, . . . We do not believe that the official statements repeatedly made in the House of Commons to the effect that the war is approaching its end have the slightest foundation in fact."

In Holland the comment of the newspapers is jubilant. The Telegraf says "the moral effect of the triumph can not be overvalued and the Boers will obtain another lease of life," In Spain the newspapers are for once, apparently, manimous, Madrid journals such as the Liberal Heraldo, Imparcial, and Globo, the Republican Liberal and Pais, the Clerical Siglo Future, and the Carlist Correo Español all rejoicing in the victory over Methuen and pronouncing it fortunate for humanity. Italian papers are differently inspired, the Patria (Rome) and Tribuna (Rome) admiring the coolness and steadiness of the English and advising the Boers to yield .- Translations made for THE LITERARY DIGEST.

## AMERICAN INSTITUTIONS AGAINST GERMAN INSTITUTIONS.

"HE contrasts brought out so sharply during Prince Henry's trip to this country are now engaging the attention of German newspapers, and even of the press outside of Germany. There has ensued, in fact, a comparison between American institutions and German institutions, the trend of which is denoted by the following from the Frankfurter Zeitung :

"Those who think the maintenance of order throughout a princely trip impossible without a great force of police and military, must be impressed by the ease with which it is accomplished in a self-governing community. It is to be hoped Prince Henry will not fail, upon his return to Berlin, to report his experiences in this respect fully. . . . Especially noteworthy is the extraordinary appreciation which Prince Henry, in his brother's name, testified for the American press. As we are not aware that the moral quaitty of the American press is higher than that of the European, and especially of the German press, one may reasonably anticipate that Emperor William will transfer some of his esteem for the American press to the home press. Until now the impression has been that in German official circles representatives of the press ranked not even with non-commissioned officers, to say nothing of 'commanding generals.' In Prussia it would be thought a thing unheard of for an inferior officer under punishment to be led bound through the streets, as has repeatedly happened to German newspaper editors. Only when a certain prestige was sought, as, for instance, at the opening of the North Sea Canal, where the foreign press was likewise represented, was the German press given the consideration to which it is entitled. If Prince Henry's trip through the United States effects a change in the point of view from which certain elements at home regard the press, that would be a most unexpected but highly desirable result."

In comparing American newspaper editors with his own commanding generals in importance. Emperor William did not say whether he approved or disapproved of the manners of the Americans, says the Vossische Zeitung (Berlin), an organ of the middle classes; but it is to be hoped that he approved. The Berliner Tageblatt observes:

"Is not this reverence for the press merely a German export article, of no use at home? Was not the Emperor's bright saying, as repeated by Prince Henry, 'that editors rank almost with my commanding generals, framed only for the other side of the water? Whoever knows anything of our domestic manners and customs must, unfortunately, think so,

This sort of comment displeases the conservative Hamburger Nachrichten, which says the flattery of the Americans in which royalty indulged has gone to the heads of some at home. It says that Prince Henry also compared the press to numberless submarine mines:

"These mines go off at times in the most unexpected ways. Prince Henry added that American paval history teaches us to pay no attention to mines, if any are in our way. He had only to mention the name of Farragut. If the text of the speech in this place is accurately given in the cabled translation, this

GERMAN IDEAS AND AMERICAN IDEAS. GUARDIAN BÜLOW: "Don't crowd, gentlemen, don't crowd!" VOICES FROM THE REAR: "Then see that the way is cleared. We have business to transact with Uncle Sam."

- A'ladderadatech (Berlin)

seems to us like a reference to the Pauncefote matter and the press campaign so actively carried on here and there since Samoa and Manila days. The last mine went off, as is known, just when the prince departed, in the shape of the New York Herald's announcement that Prince Henry had sent Admiral Dewey a letter of excuse on account of Admiral von Diederich's conduct at Manila. This announcement Prince Henry personally contradicted just before he went on board. There was no telling what other mines would go off, and it was with this in mind that the words of the Prince to the American press representatives were spoken.

German institutions may be modified by American ideals, in the opinion of the liberal weekly, the Nation (Berlin), which says:

"Prince Henry will return from the great republic on the other side of the ocean with impressions that may have a bearing upon our domestic development in Germany. The powerful growth of this republic, the conspicuous number of individuals who have raised themselves from the poorest circumstances to positions of first importance, will show him in the clearest way that the modern world demands men different from those that can be produced by the Prussian aristocracy."

An interpretation of American Institutions for the benefit of Germans has been made in the Vossische Zeitung (Berlin) by the

editor of the New-Yorker Staats-Zeitung, through the medium of a series of articles on the Monroe Doctrine. The writer, Georg von Skal, says:

"The American people are firmly convinced that their form of government is the best in all the world. With very unusual execptions, there is no arguing on this point with even the most enlightened Americans. They will invariably conclude with the observation that the worst republic is preferable to the best monarchy, and the admission that anything good can be connected with monarchy as such is a great concession."-Translations made for THE LITERARY DIGEST.

### PRESIDENT ROOSEVELT AND THE BOER ENVOYS

EUROPEAN newspapers, with the exception of those of Eugland, are beginning to attack President Roosevelt for his treatment of the Boer envoys, whom he received as individuals merely and to whom he communicated the official neutrality of the United

States in the Boer war. Says the l'ossische Zeitung (Berlin) .

"The talks of the envoys two years ago with the President of the I'nited States and with the Secretary of State were fruitless, but they bore the impress of kindliness. Then, as well. McKinley had to tell them that after the refection of his overtures by the Euglish cabinet he must adhere to the policy of strict neutrality. But his words had the ring of warm good-will. perhaps only

A D WOLMANA

because the Presidential election was in prospect. McKinley might, by gruff rejection of the Boer envoys, have alienated the sympathies and votes of many voters. Mr. Roosevelt's re-

accounts before us, to be the outcome of cold calculation." There was a great difference, too, in the treatment accorded the envoys in New York from the warm reception of two years ago, according to the same paper. The metropolis in 1900 greeted them enthusiastically, while in 1902 it did not notice them. The Independance Belge (Brussels), which coudemus

"imperialism" in the United States, says:

pudiation of all intervention in the struggle seems, from the

"The United States, it seems, made an effort at the beginning of the war. Mr. McKinley, it will be remembered, asked England if she would consider an offer of mediation as an unfriendly act. The offer was declined with all possible courtesy, and the Washington Government after that could have engaged only in violent intervention. But Mr. Roosevelt might have taken it upon himself to ask London if Great Britain was still in the same frame of mind and if she remained firm in her refusal to accept the mediation of a foreign Power. The reply can be foreseen, but the action, simultaneous with or immediately following the action of the Netherlands, would have had a powerful moral effect."

Mr. Kruger's disappointment is referred to as "powerful";

"That the illustrious old man should feel disappointed will be readily understood. But it must not be overlooked that the

Boers will need the good offices of foreign Powers when they have decided to negotiate without reference to the question of the independence of the republics.

A proposition to appoint a mission of peace "dependent upon no nation" is made in the Deutsche Revue (Berlin) :

"The sentiments of all humanity are with the Boers, but the policy of every one of the Powers forbids all intervention in this most deplorable war. The danger of a world in flames would be more fearful and much worse even than this guerilla war."-Translations made for THE LITERARY DIGEST.

"Drink Coercion" in Germany,-Three fatal duels have recently been fought in Germany by members of important social circles, and the close connection that seems to have been established between the drinking customs of Germany and these duels has elicited from a Leipsic professor, Dr. Rudolph Fick, a protest against what he calls "the "drink coercion" that prevails. No one, he writes in the Berliner Tageblatt, dreams of demanding uni-

THE SOUTH AFRICAN DELEGATES.

astrons compulsory drinking and the Kneip Comments that are proving the ruin of innumerable

Why should it be necessary for everybody to young people. partake of intoxicating liquor, even for those to whom it is distasteful or injurious? Where is the 'manliness' in inflating the stomach with a large quantity of alcoholic liquid; why should it be particularly 'manly ' to vie with one another in drinking spirits; why not in drinking water, why not in eating roast yeal? Why this coercion just with regard to alcohol? No one ever dreams of constraining another to use seltzer water, or coffee, or tea. In short, this alcohol fanaticism, this intolerance on the part of a drinking public, this persistent subjection of those who are not inclined to drink to ridicule, derision, and constraint . . . we must prevent. People ought to be at liberty to let drinking alone, or to use beverages that contain no alcohol, without danger of insult. And just for the attainment of this object, the spread of total abstinence is of the utmost importance. . . . As long as intoxication is considered no disgrace for respectable people, as long as even in joke people are suffered to quote, 'He who never has been drunk is not an upright man,' we shall continue to lament occurrences like those at Insterburg, Morchingen, and Jena," -Translation made for THE LITERARY DIGEST.

IF WALDECK-ROUSEAU HAD DIED! "We do not wish the death of the singer, and God knows if this man is one," observes the clerical Corre-(Nondant (Paris) of the recent accident to the French Premier; "but on learning of the event which might have been so fatal, we could not refrain from asking ourselves a question which M. Waldeck-Rousseau, is the painfut leisure his wounds bave brought him, has perhaps asked himself would have happened had he succumbed to this terrible shock! What impression would bis death have made! What regrets would there have been! How many, outside the allways narrow circle of intimate affection. would have thought of shedding tears at his lose ""

# NOTABLE BOOKS OF THE DAY.

### A PEN BALLADE FROM SOUSA.

THE FIFTH STRING. By John Philip Sonsa. Cloth, 75 x 352 inches, 123 pp.
The Bowen-Herritt Company, Indianapolis.

In these days when everybody writes, it is not surprising that John Philip Sousa, the energetic bandmaster, should make a plunge into literature and prove that he has "more than one string to his bow." "The Pifth String" is a musical romance with a strong love interest and a generous dash of the preferentartal. His English and

IONN PHILIP SOUSA

style are sufficiently continendable. But it is a heavy undertaking to introduce the devil to one's readers convincingly, so that they take him seriously. The fault Mr. Sousa falls into is that he projects his Satanic majesty flippantly, and then quite gravely sets forth his potency.

A pushing impresario brings over a wonderfor violinist, Angelo Douti, who meets Midred Walker, the limit-lessly beautiful daughter of a banker, at a reception the evening preceding that of his debut at the Academy of Music. He falls in love with her even before he is Introduced. Then Mr. Seusa puts an awful obstacle in the path of the young violinist. The lady has never been moved by music! She saystohim, in her beautiful sincerity:

"I never hear a pianist, however great and famous, but I see the little cream-colored hammers within the piano bobbing up and down like acrobatic Brownies."

Angelo, of course, liminediately reflected that she had not heard him play! When she did, it would not be to hills of the very different sounds to which his violia strings were contributing when resident in thiel natural womers. But had: visule the Academy is yelling its deslight over his masterly virtuosity, "Mildred Walker, serutinizing the program, merely drew her wrap closer about her bisulders and sat mure erect." Yethe had "unquestionably soored the greatest triumple of his career." Could anything be wors!

Dioti boits, and, flying to the Bahamas, leases a small toy and tries to learn to play the violin! He gets out of patience and, smashing his "Straft," cries on the prince of darkness to help him. This obliging in dividual promptly appears and presents his credentials: a visiting-card with "Satan" engraved on it and in the lower left-hand corner, "Prince of Darkness."

Satun gives tilm a violin possessing one dark string with two white ones on either sule. He tells Diotit that this "wrapped with strands of hair from the first mother of man, and that to play upon it is to die at once." He cheerfully adds that this need make no difference to so skilled a low as Diotit.

Of course, Diotti takes it, and what happens one may discover by perusing Mr. Sousa's little book. If the opera-bourfe introduction of the Devil doesn't balk one, the rest is easy and rather interesting, although the "Fith String" has not a happy ending. How could such a string have:

#### THE REAL SWITZERLAND.

Swiss Life in Town and Country. By Alfred T. Story. Cloth, 5 x 752 inches, 989 pp. Pirce, \$0.10 net. G. P. Putnam's Sons, New York.

T has been the fate of Switzerland to be regarded as a sort of show place for the rest of the world. The ordinary tourist will hardly get a glimpse of the real life of the people if he follow only the beaten line of travel. The individualities of other countries thrust themselves even on the blindest of sightseers; but in Switzerland, in the route of travel, there is nothing in sight but elaborate preparations for the traveler that he may enjoy the incomparable scenery in comfort; even the national costumes that he sees he knows are put on for his benefit. And after a time the whole country seems like an elaborate setting for an opera that never takes place. Books like Mr. Alfred T. Story's "Swiss Life in Town or Country" give the other side of Switzerland; what the life is that goes on, on the foothills of the spectacular mountains, and in those parts of the Swiss cities not occupied by the Hotels Beauregard and Bellevue. Considered as a whole, Mr. Story's book is an interesting one. He was fortunate, in the first place, as to his subject; and his manner of treating it, while not brilliant, is very acceptable, and goes as deep into the subject as the space permits. It is not a book that is written from within. It is manifestly the work of a man who knew a good deal of his subject to start with, and then conscientiously "looked it up" before writing his book. But if the book is written by an outsider, it was written by a sympathetic one and one capable of making his readers come in touch with his subject. In second chapter, "The Strugele with Nature," is a peculiarly suggestive one, especially if the reader has had the habit of looking on the numutation of switzerland as a magnificent spectacle placed there by a beneficent Providence that he and his fellow tours is might enjoy the view or do a lattle amateur mountan-climbing.

It has always been the conventional thing, to admire the Swiss character, when one though about it at all, and Mr. Story gives succine reasons, for this admiration in his chapters on public education, philametropic work, and national industry. For the little Swiss republic manages all its house-keeping with a precision that is the despair of the clear indicate the surface of the

# THE LIFE OF A FLAWLESS QUEEN.

V. R. I. HER LIFE AND EMPIRE. By The Marquis of Lotne, K. T. mow His Grace the Puke of Argello. Cloth, 5½ x 8½ mehes, 3y3 pp. Price, 8,59. Harper & Hros., New York.

I T would be bad taste for any one to write an uncomplimentary life of his deceased models-rishes; and in some tasted if the mother than the paper of the base been Queen of England. At the same time has song of praise, and yet not have tarrished the memory of this, lustrious lady, "V, R, I." is the title of the book, and it is as Victoria Reginal Imperatis that the queen appears throughout its pages. Every aspect of the Queen shown by the author is the queen of the robes of sestimating the properties of the probability of the properties of the probability of

We are told that in certain homes of the British middle classes. Burke's "Peerage" and the family Bible form the most conspicuous part of the household library, and "V. R. I." by the Marquis of Lorne, now his Grace the Duke of Argyll, would form a worthy pendant for the Peerage. It is so eminently what a person of the middle class would desire his queen to be, so decorous, practising in an imperial way all the domestic virtues, rearing any number of little princes and princesses with regal simplicity-a fine figure of all that was dearest to the heart of the British matron. No new light is thrown by this book on the charactor of the Oueen. It will not be here that the future historians of the Victorian era will look for material, for the Marquis of Lorne has tried to draw a picture of a faultless woman and perfect queen. The touches of human nature that exist in the book have found their way there in spite of the author. Occasional notes from the diary of the girl queen who "loved to be gay" sound a human note that has persistently been stifled. The account of the Queen's childhood given in " V. R. I." is familiar to every one who read the jubilee editions of the English papers. Many of them are as

familiar as the lamentable "I did it

with my little batchet" story. There are some amusing passages in the book, however. The story of the Queen's courtship and betrothal is told most naïvely, the author being quite innocent of the fact that the irreverent might find it funny. After the Queen's proposing and coufessing that she does not feel worthy of her prince, for all the world like a well-regulated suitor of the other sex, we find the prince, too, writing home to his mother: "Oh, the future! does it not bring with it the moment when I shall have to take leave of my dear, dear home and of you? I can not think of that without deep melancholy taking possession of me," exactly like

MARQUIS OF LORNE.

a reluctant young lady. It will take a true Mid-Victoria nature to find much substance to this book.

#### NEGRO HUMOR BY A NEGRO.

THE BLACK CAT CLUB. NEGRO HUMOR AND FOLK-LORE. By James II. Correthers. Silhouette Hustrations by J K Bryans. Claim, 4% x 7% inches, sée pp. Price, \$n.o., net. Funk & Wagnalla Company.

THE date of publication of "The Black Cat Club" should be commemorated by cultivated people of color as a second "Emancial
memorated by cultivated people of color as a second "Semancial
the beginning of the Independence of the Ilterature pertaining to the
American negro. The humon of the black race has, in particular, been
American negro. The humon of the black race has, in particular, been

while it takes a true and somewhat typical specimen for subject, never.

theless views him through an atmosphere of kindly, yet obscuring,

sentimentality. In short, it is unconsciously patronizing

Even writers with colored blood in their veins have had the white man's view imposed upon them. The negro is by nature imitative,

TAMES D. CORROTHERS

So Paul Dunbar, whose mastery over accepted literary forms makes him the equal of any American minor poet. is, when he comes to write negro stories and sketches, mastered in turn by these same literary canons. He makes his characters plot and plan, because of the necessity in his own mind to round out the narrative in the way approved by Prof. Brander Matthews's " Philosophy of the Short-

Now the negro does not plot. His humor is "touch-and-go." His stories are pointless in form, the so insinuating in quality that they can never after be crowded out of the mind. Certain phrases, such as "Ole Massa Gone to Phillimoyo'k" (the title of a folk-tale in the present book), are

Not only has Miss Johnston the same setting for "Audrey" as for "To Have and To Hold," but the

period is almost identical, the action,

with the exception of the first two

chapters, which might have been put

as an introductory, occurring in 1727-

28. The book is more of a love-story

than one of action, tho there are

several dramatic episodes. Its charm

is due to the portraval of an exquisite

child of nature, Andrey, and her woful

fate, for the story does not "end

happily." Many a reader will resent

the final tragedy as needless. Sometlmes a being stands so marked out for adverse fortune that ultimate

disaster is accepted as the only logi-

overflowing with such natural, spontaneous humor that any number of varying stories could be built around each. In fact, "protean" is the adjective that exactly applies to negro folk-lore-so clusive is the secret of its informing principle.

of its informing principle.
There is no legic, and me this, who she presenting it therein it is not in the Three is no legic, and me this, who whose presenting it therein is an organization with an utterly fantastic purpose, the worship of The Hillack Cat. The place selected is chiesapo, where every type of negro when the contract of the present in the present in

would naturally make use of them."
The original verse of the book mod all sorts, simple doggered and pure lyric, yet equally filled with negro humor and sentiment. "Way in the property of the policy of the property of the Ethiopian." The Rev. Dark Laudmouth recounts to the illack Cat Club the way in which Jaumes Whitcomb Ribey really received the bump on the head which the papers reported was the result of an attempted robbery. There is an alt of realism about the narrative of this water-meion raid which would convince Mr. Riley himself that it had actually happened, the "1's speck you's lied on "at white man," is the judgment of a less susceptible negro auditor.

#### SABLE THREADS IN CLOTH OF GOLD.

AUDREY. By Mary Johnston Cloth, 8 x 51/4 inches, 418 pp. Price, \$1 50. Houghton, Mifflin & Co., Hoston.

FTER the large sale of Miss Johnston's "To Have and To Hold." her next work of fiction was sure to have many readers curious to compare it with that successful effort. "Andrey," as a work of art, is superior to it, while likely to prove as prodigious a "seller."

cal finale. But after the sadness and trials of this lovable child of the mountains, she reaches the port of peace only to have the author submerge her in its smiling waters. And, forsouth, with almost a refinement of cruelty.

The atmosphere of "Audrey" is as true and grateful as that of "To Have and To Hold." As to habits and surroundings, the characters are Virginians of a period stightly anterior to the birth of Washington, denizens of a young coluny with strong savor of the mother country Not a little of the gratifying delight of the book is the author's vivid and poetic portraval of scenery. This sensitiveness to the beauty of

the material world, which is the gift of those only whose senses transmute its impressions in the alembic of the soul, is apt to be a pitfall to the writer of a tale. In truth, it is that somewhat to Miss Johnston, who occasionally lets her pen cull the beauties of a scene for her personal delectation more than for the perfection of her work.

Marmaduke Haward, lately fallen heir to his father's rich estate, is one of an exploring party whose aim is to make acquaintance with the Western mountains of Virginia. They stop at a frontiersman's cabin, and are entertained by him, his wife, his young daughter Molly, and the child Audrey. They pass on. Haward pretends that he has sprained his ankle and must return. His amorous fancy has been caught by the sylvan Molly. He loses his way, and, when he arrives at dusk, finds a smoking cablu, dead inmates, and one lone creature who has escaped-Audrey. He decides to look after her, and puts her with some family before he goes abroad to enjoy his fortune by learning the gay lessons of London. He returns, ten or twelve years later, a graduated gallant. in 1727, the thought of the little orphan long since faded from his careless soul. Then the story begins

Miss Johnston has power in character-drawing. She introduces two historical personages, famous in the Virginia colony, Col. Evelyn Byrd and his lovely daughter Evelyn. But her pure creations are no less individual and vital. The Scotch storekeeper on Haward's estate is one of the strongest and most attractive in the book, tho not at all necessary to the action. Ilan Hugon is conventional and melodra-matic. Carson Darden, rough gamester and tippler, rings true in his coarse dispracefulness.

the principal characters of the story, Audrey, Haward, and Sometime the principal characters of the Story, Audrey, Haward, and help a word, are not done with the story of the story is an ideal party and are not done with the story of the story is an ideal party and the story of the story of the story of the been schooled in suffering, she becomes an emotional acress in a jily, it is anything but plausible and a backeyed turn besides. And was there not something caddish in Haward's taking poor Audrey, the orphan dryad of the mountains, who loved him with her whole inno-orphan dryad of the mountains, who loved him with her whole innocent soul, to the governor's ball, for gallants to avoid and for outraged belies to flout?

bediet to float!

bediet to float!

the classified crisis, conseitence often has but one choice, and all the address it entails is necessary consequence. Witness many a Christian martyr. But art, which has its own insistent consenter, often has some mitigating control. It is not always the highest art to make the control of the contro

# SHALL WE DO WITHOUT OUR BREAKFASTS?

THE NO-BREAKFAST PLAN AND THE PASTING CURE. By Edward Hooker Dewey, M.D. Cloth, 55x7% inches, 207 pp. Price, \$1.00. Published by the author, Meadville, Pa

T is about seven years since Dr. Dewey disclosed, without reserve, his theory of the relation of food to health-a theory which presents him in the attitude of a discoverer, maintaining the important principle that in all eases of severe illness the functions of digestion

and assimitation are suspended-that in such cases the food administered is disposed of, not by assimilation, but by decomposition; that such decomposition in the alimentary canal oftens becomes a source of toxic impregnation of the blood; and that no waste takes place in the nerve-centres -"proving that they have been nourished at the expense of the rest of the system." Hence a new commandment : " Do not feed the severely sick !"

The present volume is presented to us as the story of an evolution in clinical dietetics. The author claims that the hygiene unfolded here is both original and revolutionary; and that writing "with conviction at white heat," he has compelled the attention of scientific investigators, as well as the adoption of his "No-Breakfast

### The Dwellings of Peace.

BY HENRY VAN DYKE, Twn dwellings, Peace, are thine. One is the mountain-height, Uplifted in the loneliness of light Beyond the realm of shadows, fine, And far, and clear, -where advent of the night Means only glorious nearness of the stars. And dawn, unbindered, breaks above the bare That long the lower world in twilight keen Thou sleepest not, and bast no peed of sleep. For all thy cares and fears have dropped away : The night's fatigue, the fever-fret of day. Are far below thee; and earth's weary wars, In vain expense of passion, pass Before thy sight like visions in a glass. Or like the wrinkles of the storm that creep Across the sea and leave no trace

So brief appear the conflicts, and so slight The wounds men give, the things for which they Here hanga a furtress on the distant steep,-A lichen clinging to the rock :

Of trouble on that Immemorial face

There sails a fleet upon the deep,

A wandering flock Of snow-winged gulls : and yonder, in the plain, A marble palace shines, - a grain Of mica glittering in the rain : And far beneath thy feet the clouds are rolled By voiceless winds; and far between The rolling clouds new shores and peaks are seen, In shimmering rabes of green and gold.

And faint serial has That allent fades into the silent blue

Serene Thou, from thy mountain hold, All day, in tranquil wiedom, looking down On distant scenes of human toil and strife. All night, with eyes aware of loftier life, Uplooking to the sky, where stars are sown Dost watch the everlasting fields graws white Unto the harvest of the seeds of light. And welcome to thy dweiling place sublime The few strong souls that dare to climb The slippery crags and find thee on the height.

But in the depth thon hast another borr Pur hearts less daring, or more frail. Thou dwellest also in the shadnwy vale; And pligrim-souls that roam With weary feet o'er hill and dale. Bearing the burden and the heat

Of toilful days, Toro from the dusty ways To find thee in thy green and still retreat. Here is no vision wide ontspread Before the lonely and exalted seat Of all-embracing knowledge. Here, instead. A little garden, and a sheltered nook With outlooks brief and sweet Across the meadows, and along the brook,-A little stream that little knows Of the great sea toward which it gladly flows. -A little field that bears a little when To make a portion of earth's daily bread. The yest cloud-armies overhead Are marshaled, and the wild wind blows Its trampet, but thou canst not tell Whence the starm comes nor where it goes. Nor dost thou greatly care, since all is well;

Thy daily task is done, And the a lowly one. Thon gavest it of thy best, And art content to rest

In nationce till its slow reward is won Not far thou lookest, but thy sight is clear : Not much thou knowest, but thy faith is dear : For life is love, and love is always near. Here friendship lights the fire, and every heart, Sure of itself and sure of all the rest,

# PERSONALS.

Senator Tillman as Cyclops. Senator Tillmen called a page to him the other day and asked him the name of a new Senator who was sitting n the Republican side of the chamber. The page, being one of this session's appointees, was not only ignorant of the new Senstor's name, but did not ven know Tillman. In his dllemma, he went to Journal Cierk Macdonald.

"Who is the man with one eve?" he asked, referring to Mr. Tillman Cyclops," replied Macdonald, without looking

no from his book and thinking of the gentleman who figures in ancient mythology.

The boy rushed back to Tillman. "Now. Sens. tor Cyclops," he said triumphently, "I will go end find out the other Senator's name."- The Washmoton Buck

Prince Henry's Keen Observation.-At one of the banquets given in Prince Henry's honor, the Prince was asked what he thought of America The people are inspiring," replied the Prince, "if I may judge from the gimpses I have bed of them. At the opera I saw refinement and culture pictured in the faces; at the luncheon to-day genius and energy; but the crowds on the streets impressed ms most. Their faces indicate, it seems to me activity and ambition not dulled by too much contentment, yet not marred by discontent. la not this the balence that makes your people so happy and so powerful?"- The New York Times.

Senator Depew's Finny Mistake.—At a great Republican ratification meeting in New York in 1829 Mr. Whitelaw Reid, the candidate for the vice-presidency, was to attend. A box was reserved for him and just above it was Chauncey M. Depew's. The story is told in The Saturday Evening Post (Philedelphia; as follows:

The meeting was well under way before Mr. Reid arrived. As soon as the great andience saw him enter his box there was a demonstration. llats were thrown in the air, hands were clapped, and hurrahs went up everywhere Mr. Reid is a man of much dignity. At times, it is said, when he has a few congenial spirits about him, he can unbend and be as jovial as any one. But ordinarity he is discribed almost to the point of austerity On this particular occasion even the wild enthusiasm of the men and women in the hig hall did not melt his reserve. He rose to the welcome and bowed in the courtly, graceful manner for which he is famous, without, however, relaxing a muscle of his face or venturing a smile.

He bowed The crowd kent up its tumult. again. And still they cried, and still he bowed. And the more he bowed, the more they cheered

and bustaed. He tried to sit down, but evidently, the crowd wouldn't have it.

Even so reserved a man as Mr. Reid is not proof against the continued cheers of a great essemblage. At last he could no longar realst the clam-He stepped to the front of the boa and was nat about to say o few words when an uprosticus shout of laughter swept over the hall. Instantly the distinguished candidate for vice-president froze up. The laughter locreased until it became almost hysterical

Mr. Reid was at first puezled, and then angered. His anger had almost approached the builingpoint when some one started the yell:
"Nn! no! Reid! Reid! Reid!"

The cry swelled louder and londer, but min-gling with it were distinct veils of languier. Mr. Reid, in disgust, hed almost made up his mind to withdraw from the los when one of the members of committee rushed in.

"They want you on the platform, Mr. Reid." he said.

"Well, then, what in the world are they laughing at me for?" demended that gentleman

Why, it's all a mistake. Depew's got the box above you, end when the crowd began to shoot a welcome at your arrivel Mr. Depew thought they ware calling for him. Ha is so accustomed to being in the limelight, you know. He han't discovered his error yet, but a man has gone up there At that Mr. Reid's reserve melted away entirely

and he joined with the others in the laugh.

# THE GREATEST TRIBUTE EVER PAID TO A GREAT NOVEL BY THE AMERICAN CLERGY

Although 11 months after the date of publication, orders for this great historical novel continue to pour in without abatement. Edition after edition has been required to meet the continued demands of the reading public-nearly one edition every two weeks. The 17th edition, 10,000 copies, is just published. From readers everywhere come expressions of satisfaction. Read below the splendid tribute from the clergy.

# arry

By GEORGE CROLY-Introduction by GEN, LEW WALLACE An absorbing story covering the period from the crucifixion to the fall of Jerusalem, every page glowing with thrilling scenes, oriental coloring and historical knowledge.

# "A Mighty Power for Good"

This exceptionally fine specimen of the noblest class of fiction has taken hold of the minds and hearts of readers everywhere. It has become already a powerful offset for the trashy novel with which the market is flooded.

# **Everywhere Aroused** Clergymen

Because "Tarry Thou" is not only intensely fascinating, but absolutely clean and wholesome from beginning to end, because its stirring pages present such a splendid substitute for the empty, or harmful story, because it imparts such a wonderful historical picture. clergymen everywhere are

Preaching Sermons About It, Putting It in Public Libraries, Forming Reading Circles to Study It, Urging Their Congregations to Buy It and Put It in the Hands of the Young, etc., etc. Over 900 Cleryymen within the last 10 weeks have written us saying they have either preached upon the book or otherwise recommended it.

## It Suggests Sermons to Preachers

Res. William J. Barnes, Ph. D., Brooklyn, N. Y.: No matter how much opposed a minister may be to works of fiction he cannot fail to be captured by its graphic portrayal. I intend to preach sermos from it.

Rev. M. A. Pederson, Chicago, Ill.: The intro-duction and appendix were especially useful to me in preparing a sermon.

Rev. Homer A. Flint, Pittsburg, Pa : I shall make this book the basis of a public discourse. Rev. E. H. Mucey, Newport, R. I.: 1 shall mak of it in connection with a sermon.

# **Title Alone Suggests Sermon Subjects**

Rev. C. W. Latham, Jackson, Mo.: It has led me to the preparation of a number of sermons. Rev. P. S. Colder, Conemaugh, Pa.: No other book has given a general view so satisfactory, an insight so clear of the country and the people. Rev. Plute T. Jones, Matteawan, N. Y.: 1 and the book suggestive for a sermon.

Rev. Chus. D. Blaker, Lake City, Minn.: The le alone has suggested a subject for a sermon. Rev. C. Christensen, Vevay, Ind. 1 have used a scene from the book to lilustrate a sermon.

# Preachers Have it Placed in Libraries Rev. C. W. Maggart, Cedar Rapids, Iowa: I will advise the city libraries to place copies on

Rev. F. L. Hartford, Vernon. N. Y.: 1 am recommending it being placed in libraries here. Rev. C. W. Leipzell, Newton, Iowa: I will see that the public library gets a copy.

Bee, F. O. Cunningham, New Bedford, Mass.; I shall suggest it to the public library and to the literary circle.

# Thrillingly Fascinating and Instructive

Rev. John Luzen, Muskegon, Mich.: It is brillingly fascinating and instructive. Rev. C. L. Schuster, Wagram, Ohio: it is a sost fascinating novel. Rev. G. H. Hayes, Henderson, Ky.: It is a wonderful book.

# Exerts a Great Good Influence

Rev. Frank M. Foster, Pittsburg, Pa.: It will do good, and cultivate a taste for better reading. Rev. S. H. Fellowes, Wauregan, Conn.: 1 will urge my people to read it instead of the cheap trash so prevalent. Rev. A. F. Wickland, Two Harbors. Minn.: It will place kernels of important truth in the minds where nothing else will.

Rev. A. D. Berry, Indianapolis, ind.: it is a delightfully helpful work. Every Home Should Have It

Rev. James J. Mofitt, Waterville, Conn.: It sould be in the home of every Christian family. George P. Goll, Maytown, Pa : It ought to be ir every hon Rev. W. J. Quincy, Troy, N. Y.: 1 am recom-mending the book everywhere I can.

# The Subject of Students' Talks

Rev. Enos Harrey, Fairmount, Ind.: I have been pleased to make the book the subject of a talk before the students of Fairmount Academy. Rev. Frank P. Harris, Melford, Del.: I have urged the merita of this book apon my Bible school, to read in connection with my Bible

# Commended to the Congregations

Rev. C. L. Palmer, Shokan, N. Y.: 1 shall advise the young people of the Literary Society to read it. Rev. G. R. Merrill, Smithville Flats, N. Y.:
. . . . At both of these services I recommended the book in strong terms.

Rev. W. D. Fater, Gas City, Ind.: 1 have urged its merits personally and in church, as I want all to read it.

#### A Great Educational Book

R. Heber Newton, D. D., New York City: It shall help the coming in of the better day, when there shall be one flock under one shepherd. A. Ort, D. D., Springfield, Ohio: It is certainly a rare book of the kind that should be read generally. Rev. W. C. Hall, Morris Run, Pa.: Its pages are flaming torches of fire diffusing light and are flam warmth.

## **Delightful Reading**

Rev. Ernest W. Simonds, St. Joseph, Mo.: It is certainly delightful reading. Rev. J. S. Allright, Gnadenhutten, Ohio: It the best book I have ever read. Rev. W. W. Hart, Friend, Neb.: Strangely fascinating in style and in matter most helpful.

George C. Lorimer, DD., Boston: The story is of thrilling interest. Hugh Miller Thompson, Bishop of Missisppi: It is the work of a scholar, a poet, a man

Rev. W. H. Arthur, Gallipolis, Ohlo: In my judgment it surpasses any of Shakepeare's, Mitton's, or Tennyson's works. Long may the work of George Croly live to clevate and inspire the minds of people.

### COFFEE TOOK IT.

Robbed the Doctor of his Cunning.

"I was compelled to drink some Java coffee yester" lay morning and suffered so much from its effects that I feel like writing you at once,

I am 61 years old and for a great many years have been a coffee drinker. My nerves finally got into a terrible condition and for about two years I suffered with sinking spells and was so nervous that it seemed as though I could hardly live. I suffered unrold agonies. My heart would stop and my kidneys gave-me no end of trouble.

About six months ago I gave up coffee for good and largan using Postum. I invisted on knowing that it was properly made by being sufficiently boiled, and I prefer a cup of rich Postum to Java, Mocha, or any other coffee

My sinking spells have left me, my head gives me no trouble now, the kidneys are greatly improved, and, in fact, I feel a great change in my whole body. It is such a comfort to be well again.

I know a physician in San Antonio who had become so nervous from the use of coftee that his hand trembled so ludly that he could not hold a lancet, or even take a splinter out, and could scarcely hold anything in his hand. Finally be quit coffee and began using l'ostum. Now the doctor's nervousness is all gone and he is in good health." Name given by Postum Co., Battle Creek, Mich.

This little booklet tells how to secure bodily comfort-how to be free from colds-tells of an underwear that is more cleanly, more comtortable, and

by thousands, who wonder how they were ever satisfied with the prickly, irritating wool, or the cold clammy cotton. Write for a copy.

# Rheumatism

The Editor of the NEW ALBANY (Ind.) MEDICAL HERALD, in the course of an article on the treatment of rheumatism, sayst

But not until lately, when Tartarlithine has been employed by us, have we obtained results that were even fairly satisfactory in the treatment of gout and rheumatism. By the employment of this preparation I have been able to relieve some of the most distressing afflictions of this class, and now regard Tartarlithine as the most valuable remedy at our disposal in the treatment of this class of affections. In rheumatism and in gout Tartarlithing can be administered with confidence."

Send for our free namphlet, telting you how to cure rheumatism.

# The Hound of the Baskervilles By A. CONAN DOYLE

The First Appearance in a Complete Novel of SHERLOCK HOLMES

THE FOREMOST CHARACTER IN MODERN FICTION.

If only for the tense interest that the mystery of the demon hound arouses, this story would be well worth reading.

But there is more than this in it; there is profound character study, and consummate literary art.

Both for plot and treatment it is the greatest detective story in English literature.

# Inspiring Contact with Great Minds

# MODERN ELOQUENCE

Hon. THOMAS B. REED Editor-in-Chief

ASSOCIATE EDITORS: Hon. Justin AleCarthy, M.P. Rossiter Johnson Albert Ellery Bergh Edward Everett Hale

John B. Gordon Jonathan P. Dolliver James B. Pond Nathan Haskell Dole

George McLean Harper
Lorenzo Sears
Champ Clark
Edwin M. Bacon
Truman A. DeWeese

MODERN ELOQUENCE, former Speaker Thomas B. Reed's celectic library in ten volumes, stands alone and apart from other publications. The great eloquence of master-thinkers and doern has been brought together in such form as to permit easy access, constant use, and frequent reference.

The work is not political oratory. It is not the fugitive expression of chance thought. It is at once great literature, as well as as great eloquence. It is historic, for it voices the utterances of those who made history as they planned and wrought. Such as work cannot be better than, but must be as good as, those who make it. It required vast experience, wick knowledge, and intimacy with the great to reject from the enormous mass of obtainable material that which did not conform to the highest standards. An even greater task was to secure that which is the essence of thought and action, in fact, the true "Expequence, which is Logico Fire."

The eloquent appeal, the sublime thought, the intense feeling of yesterday, is the classic of to-day.

No figure in our national life of the past quarter-century astands out so Cearly defined—the one man capable of such a task—as the Honorable Thomas B. Reed, former Spaker of the House of Representatives. A master among mater-minds, be brought a superb equipment to the task; a thorough knowledge of oratory and edoquence; a wide personal acquaintance with the greatest me in our literary, social, commercial, and political life, and a fine instinct of discriminating selection. Thus the made Modern Eloyauce representative of all that was great in the spoken thought of the nineteent century.

As Secretary of State Hay says: "He has gained in this work the same eminence as editor that he already enjoyed as orator."

Alded by a corps of leading litterateurs, editors, orators,

men of affain, and of fine judgment, the editor examined a mass of material that was inaccessible to any but those few men who enjoyed with him the eminence he had attained. Because of the exclusive privileges thus enjoyed, Modern Eleppunc contains a fand of charm, of inspiration, of thought, and of history that has never before been in type.

About the banquet board parties and policies have been made and unmade. The speeches there often give expression to the thoughts that golde the nation. In a recent speech before the New York Chamber O Commerce, a Calinet member made a semiofficial declaration of America's foreign policy. Next morning that speech was quoted in every Capital in the world—but it was quoted as the reporters heard it. No two heard it alike. In Mostern Elegueux:

In these volumes the reader is told of the time, of the place and circumstance of each speech—address—lecture. We also catch the cheers, the applause, roars of laughter, or, perchance, surrender ourselves to the tense silence of suppressed emotion as the speaker's eloquence and thought tay hold upon us. It is magic and it is real.

There is no other work so full of valuable and timely suggestions, and affording so many model illustrations of the beauty and power of the English language. Its value is indeed inestimable.

Classic and Popular Lecturers reflect that oratory which is peculiar to our national life. Many of them have fashioned and moulded the thoughts and actions of the century. They are epoch-making uterances of the men of yesterday and to-day. In Modern Eloyunce they are preserved for generations to come.

The volumes of Great Addresses are in many particulars, the most unique part of Medrar Edynaurac. Three are over too addresses, delivered by the foremost figures of our times. In them we read actuating thoughts, amblitions, sense of duty, and suggestions for future generations, in words of magic, novilled in that authority which comes only of vast experience. They have been forged amid the stress and storm of great crises, or in the white heat of great achievements. They voice our national character and sympathies.

In the Tenth volume of Modern Eloquence, great wit and great wisdom, droll humor and fantastic fun, sublime sentiment and simple truth, all have their place, for they were masterhands that made this as well as the other nine volumes.

The gamut of human emotions is run, as a harp is touched by the dexterous fingers of the player.

#### HALF A MILLION MILE-STONES Ve ON THE HIGHWAY OF UNIVERSAL HISTORY

Events mark the progress of civilization; as Macaulay says, they are men's tutors. Important discoveries and movements often have their inception in trifling events. Newton evolved the law of gravitation from the dropping of an apple from a bough, Five hundred thousand events in seventy centuries of history have been classified in chronological order in THE CYCLOPEDIA OF CLASSIFIED DATES. The vital facts of all the standard histories covering seventy-nine countries have been focused in this single compact volume, besides thousands of significant facts not included in any of the histories.

# THE CYCLOPEDIA 📴 CLASSIFIED DATES

By CHARLES E. LITTLE

Compiler of "Biblical Lights and Side Lights," and "Historical Lights"

In this single volume are combined the essential features of a comprehensive outline of the world's history since the earliest times, a biographical dictionary with data on all the important characters in history, a geographical gazetteer, and a cyclopedic record of progress and thought. Thus the owner of this Cyclopedia may follow the history of any country, backward or forward, he may instantly find the date of an important event, and in a moment ascertain the conditions of the country and of the whole world at that time.

#### NOTABLE EVENTS THAT HAVE OCCURRED ON APRIL 15th

Speakers and writers have frequent occasion to refer to events that occurred on a particular day or epoch in history. The Cyclopedia instantly supplies these facts. For Instance, in the United States alone, the Cyclopedia gives the following events that have taken place on April 15th. Data of similar character is given for seventy-eight other countries

- April 15, 1777, KENTUCKY. Indians attack Boones-boro; 4 of Col. Booce's men are killed.
- April 15, 1777. PRILA. Congress resolves to abol-ish distinctions between troops, as "Congress" Own Regiment," "Washington's Life Guards."
- Own steglment, "Washington's Life Guarda." April 15, 1989, D. C. Congress prohibits the im-portation of specific articles of British growth or manufacture, the act to take effect the 11th of November.
- April 15, 1804, CALIF. The steamboat "Secretary " bursts her boiler near San Francisco; 50 per-sons perish.
- April 15, 1901, D. C. President Lincoln summons Congress to meet on July 4th, in extra session, and by prociamition calls on the States to furnish 73,000 volunteers, to serve three months
- April 18, 1862, ARE. Confederates cut the levee near Fort Wright, on the Mississippi, and an limmense amount of property is destroyed.
- immense amount of property is destroyed.
  April 15, 1967 Taxx. Gen. Halleck orders Gen.
  Pope to transfer his successful troops to join
  the army on the Tennessee River.
  April 15, 1963, Va. Gen. Hooker reports an army
  of about 130,000 men; Gen. Lee's army, deprived of Longstreet's corps, comprises about
- April 15, 1864, La. The fleet on the Red River, above Grand Ecure, defeats a Confederate attack under Gen. Thomas Green. Confeder-ate loss, 700 men.

- April 15, 1895, Mp. Booth and Herrold arrive at Dr. Samuel Mudd's house, near Bryantown, 30 miles from Washington.
- April 15, 1895, D. C. 15, 1865, D. C. Abraham Lincoln r conscious till his death at 7:30 A. M.
- April 15, 1865. The military order of the Loyal Legion is organized as a non-political and non-sectarian association.
- April 15, 1865, S. C. At Charleston, Gen. Saxton calls a mass-meeting, and William Lloyd Garrison, the abolitionist, makes an address, April 15, 1863, D. C.
- tarrison, the abouttons; makes an address, rid 15, 1863, D. C. Andrew Johnson, of Tenn., takes the oath of office in the kirkwood Hotel at Washington, three hours after the death of President Lincoln; he is the 17th President in the 30th term of the presidency.
- April 15, 1973, CHICAGO. Dr. David Swing is tried for heresy before the Chicago Presbytery, for beresy be and acquitted.
- April 18, 1878, D. C., Congress: Senate: A. G. Thurman (Dem.) of Ohio, is elected President pro Tempore. Democrats control both House and Senate for the first time since 1856.
- April 15, 1884, D. C. Congress: The House re-jects the Morrison Tariff Bill. Vote, 159-155. April 15, 1800, Phra. Archbishop Ryan will be editor-in-chief of "The American Catholic Quarterly Review" beginning with the July number.
- April 15, 1890, D. C. Congress: The House passes the Naval Appropriations Bill. Vote, 117-100. Introduced April 1st.

- April 18, 1974, Pinta. The first thesite is opened. April 18, 1984, i.e. At Causion on the Wichits at his corner of Cotar and Verroon Streets, and the corner of Cotar and Verroon Streets, with the Fair Pentilent, by Hallam's Company, at "the atoreboure" of Win. Pinnetes.

  April 18, 1986, Mr. Booth and Heroid arrive at decisions and bistranced in the English 18, 1985, Mr. Booth and Heroid arrive at decisions and bistranced in Figure 1915. April 15, 1890, 1a. The Legislature gives physicians and pharmacies the right to sell liquor free of license tax.;
  - April 15, 1891, New York. Ex-President N. Niles of the Tradesman's National Bank is rearrested and arraigned on a charge of embezzlement.
  - April 15, 1991, ILL. The annual meeting of the Whisky Trust takes place in Peoria. It re-ports sales for the year of 417-98, 17 gallons, nearly 4,000,000 gallons over last year, and 9,000,000 gallons over the previous year.
  - April 15, 1892, Mass. Two While Caps are sentenced to imprisonment in Decham Jail for one year each for tarring and feathering H. N. Fratt.
  - April 15, 1892, New Yoak. In the Legislature the Assembly passes the Woman's Suffrage Bill. (It fails in the Senate.)
  - April 15, 1804. New York. A statue to the memory of Father Drumgoole is unveiled by Archbishop Corrigan.
  - Archosanop Corrigan.

    April 15, 1904, Panta. The trustees of the University of Pennsylvania decide to lengthen the course to four years in the scope and organization of the Wharton School of Finance and Economy.

  - Economy.
    April 15, 1844, D. C. Congress: The Senate dis-poses of 18 paragraphs of the Tariff Bill; in the house a new quorum-counting rule is the Committee on Rules; B is aimed against the Committee on Rules; B is aimed against obstructive action by an adverse miscondi-ction of the property of the property and designed to facilitate the transaction of business by the majority.

losiah Strong, D.D.; "I am delighted with it. . . . . Why didn't you do this years ago? It would have saved me months of time."

#### Instantly Answers the Questions, When? Where?

If you don't know a date or the locality of the event it marks you can quickly find it in the Cyclopedia by aid of the wonderful easy reference system. In two minutes you can flud out about a fact that would otherwise require several hours' search through a dozen separate historical works. For busy men it is an ideal time and labor saver.

#### Cross-Reference Index to Half a Million Dates

Three hundred pages of the work are devoted to an exhaustive cross-reference index to half a million dates. In addition to this the contents are arranged chronologically under each country in the departments of: Army and Navy, Art, The Church, Births and Deaths, Literature and Education, Nature, Science, Society, the State and Miscellaneous,

HIGH AUTHORITIES ARE DELIGHTED WITH IT. Hon. Elibu Root declares it to be "complete in every respect." Hon. John D. Long: "I am struck with the vast amount of information it contains." Judge Mayer Sulzberger, Philhadelphia: "It is a need piece of machinery for workers who must co-ordinate historical facts in a harry." Hon. Cookmon K. Deris: "It is a work of high merit prepared with great care, and one which is almost invaluable to the sulcein and man of affairs." Hon. Cared D. Profile. "I find to one of the most valuable books of dates that has yet been published." Hon. Thomas B. Reel: "A very valuable volume." J. F. McCurdg, 19.D., L. L. P. L. P

#### TERMS OF SUBSCRIPTION

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, to cents. Foreign postage, \$4.50 per year,

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named POST-OFFICE ADDRESS .- Instructions concerning tenewal, discontinu-

ance, or change of address should be sent two weeks prier to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing must always be given.

PRESENTATION COPIES .- Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

#### TOPICS OF THE DAY.

#### POLICE DEVELOPMENTS IN NEW YORK.

THE police situation in New York City is not without material to tempt the satirist. In the first place everybody seems surprised and pleased that the New York patrolmen. whose sworn duty it is to enforce the law, have at last decided to enforce it even despite the alleged reluctance of their captains. The mayor has issued a statement to the press indorsing their action, and this statement, which would, in a normal condition be taken as a matter of course, is thought worthy of big newspaper headlines on the front page. The police commissioner and the district attorney have also approved, and this likewise is hailed as a sensation by the press. The liquor dealers declare that they will not only close their saloons on Sundays, but will fight to close the Sunday clothing-stores, barber-shops, and every other place that is open on the Sabbath contrary to law. Finally the patrolmen's wives and other femain relatives have held a big thanksgiving service in the Metropolitan Temple, to express their joy over the release of their husbands, sons, and brothers from "the system" of the past.

The visible beginning of this era of enforcement was made by forty patrolmen of the Thirty-Seventh Street police-station on Sunday, March 30, when they captured eighteen violators of the excise law, without waiting for specific instructions from their superiors. The reason for this unusual performance by the patrolmen is still a matter of wonder and discussion in the New York papers. The general conclusion is that the patrolmen revolted against signing slips every Sunday night certifying that they had seen no violations of the law during the day, and determined to make a stand for honesty, trusting to the mayor and police commissioner to support them and protect them from any persecution by the captains. Another theory is that the district attorney has been getting evidence of police neglect during the last three months, and that the pairolmen heard of it and decided to "stand from under" by enforcing the law. The Brooklyn Standard-Union, however, thinks that the police are in a revengeful mood because the new administration changed their hours of duty back from eight to twelve (restoring the two-platoon system), and are trying to get the administration into hot water by enforcing the excise law.

The only ones who are not claiming any credit for the "revolt" are the police captains, who are popularly supposed to receive blackmail money for protecting the law violators. The eaptainshave relied on the slips mentioned above as proofs that the law was enforced in their precincts; the action of the patrolmen now indicate that these are likely to be worthless for that purpose. The captain of the Thirty-seventh Street station, and perhaps other captains, are to be brought to trial for neglect of duty. It is predicted that New York City will be pretty "dry " on Sundays for a while. What the ultimate result will be is a matter of considerable speculation and concern. The New York Times

"The policy of enforcement may bring Tammany back tonower at the next mayoralty election. That prospect will have few terrors for those who see, as every intelligent man ought to see, that the present 'wide-open' condition of the town, the con-tinuance of the police system of blackmail, protection, and 'tipbing, and in general the prevalence under a reform government of vices for which Tammany was punished and put out, is beginning to destroy, if it has not already destroyed, the chief argument by which a majority of the voters were brought to the support of the reform ticket, .

"Whoever is in doubt whether the reform administration had anything to do with the reform of the police from within has only to ask himself one simple question: Can be imagine these policemen doing this thing under the régime of Van Wyck and Murphy and Devery? No doubt the honest men of the force found the making of faise statements as irksome and offensive then as they have found it now. But they knew that if they revolted against 'the system,' all the power of Tammany would be put forth to crush them. For 'the system' was Tammany. It was only when an anti-Tammany administration came in that they could be sure that they would not be made to suffer for doing their duty. That was what gave them conrage to do their duty.

"So that 'the administration' had something to do with reforming the police, after all."

#### Says the Brooklyn Eagle:

"The first thing is to stop the payment of protection money. When that system is once broken up the enforcement of the excise law will settle itself in response to the real public sentiment of the community. It is the protective system and not the open Sunday which is the present object of attack. And the corruption of the police is an evil so deadly that to end it the town can afford even a strict enforcement of the excise law for a little while, unpopular as such a course will be and unnecessary as it is under ordinary circumstances.

#### The New York Commercial Advertiser says:

"We have reached the point at which as a community we can not any longer play the hypocrite and sneak in this matter. Sunday selling in violation of law means police blackmail. The two can not be separated, and one can not be abolished unless the other be abolished also. If we wish to have an honest police force, we must either consent to Sunday selling under law or to a 'dry Sunday.' We can no longer pretend that we are preserving the Christian Sabbath from desecration by forbidding liquorselling on Sunday and then shutting our eyes to it, tho we know it is going on through the side doors, and know, too, that it is the chief cause of police corruption. The legislature has adjourned, and we have no hope of altering our laws till next January. We are 'np against it' until that time, and everybody who wishes to see the end of the reign of humbug and the dawn of the reign of courage and honesty on this question will rejoice that this is the case. Mr. Jerome is the man who has forced us into this corner, but we alone can get ourselves out of it."

-The New York Herald.

#### CHARACTER OF CHICAGO'S GOVERNMENT.

T was only a few years ago that the Chicago city government was considered by the newspapers a fit text for severe moralizing or caustic satire on municipal corruption. To-day the Chicago papers are boasting to all the world of the honesty and purity of their city council. In the new council elected on Tuesday of last week "the uufit aldermen are in a hopeless minority," declares the Chicago Evening Post, and "the new council will stand 55 to 15 on every question presenting a square issue between equity and corruption, popular right and illegitimate private interest." "Bathhouse" John Coughlin defeated the reformers in his ward and was returned to the conneil, but the Chicago Tribune notes that "no seat held by an alderman on whom the public could depend has been lost, while some highly objectionable members of the council have been replaced by men who. while they have not been tested, will be true, it is confidently believed, to the pledges they have made." The credit for Chicago's "present high standard of its municipal government" is given by the Chicago Journal to the Municipal Voters' League, which has been working toward that end for years. The Civic Federation is also given a hearty meed of praise. The Chicago Record-Herald says:

"If there have been any lingering doubts about the vitality of the reform movement in Chicago they aboud be completely dispelled by the returns in the aldermanic elections. No less than three-fourths of the successful candidates are men who have either made a creditable record in the conneil already or who have such a standing in the community that it is a reasonable presumption that they will work for the public interest.

preestinguistic tractices are the controlled to the controlled tractic tractic and the controlled tractic tractic and the selection and tractic and tractic and tractic and tractic and the state and tractic and tractic

A vote of 124,000 to 10,000 was cast in favor of municipal own-

ership of gas and electric-light plants, and a vote of 125,000 to 26,000 for municipal ownership and operation of the street-railways; but the vote appears to have been merely an expression of opinion, and not mandatory.

#### VIRGINIA'S SUFFRACE PLAN.

It is frankly admitted by the Virginia papers that the suffrage plan in the new state constitution is intended to bar most of the negroes from the polls, while admitting as many of the whites as possible. The Richmond \*Diepatch\* says that "it is not as severely restrictive of the negro vote as many of the representatives of the black belt wished," but that "so far as the white voters of the State are concerned, few of them have anything to fear from the proposed suffrage article," for "their interests are well cared for," and "with few exceptions those who are now voters may have their names transferred to the new to-liminate objectionable negro voters from our politics without violating the freeenth amendment to the federal Constitution."

The plan, which has been adopted by the constitutional convention, and which will either become law by proclamation, or await ratification at the polls, gives the ballot to four classes of citizens: First, to all who "have served in time of war in the army or navy of the United States or the Confederate States, or of any State of the United States"; second, to their sons; third, to any citizen who has paid, during the year previous to registration, one dollar in property taxes; fourth, to any citizen who can read any section of the Constitution and "give a reasonable explanation" of it, or who "shall be able to understand and give a reasonable explanation thereof when read to him by the officers of registration." This last is the much-discussed "understanding clause," whose critics believe that 1: will be used to admit ignorant whites to the ballot, and bar out ignorant blacks, at the pleasure of the registration officers. The above provisions remain in force only until January 1, 1904, but those who register under them before that date "remain permanently enrolled as electors." After January 1, 1904, all new voters must have paid their poll taxes, and, unless blind or otherwise physically disqualified, each must "make application for tegistration in his own handwriting." This is considered an educational qualification, and will be required of all voters, white and black, after the end of next year.

The understanding clause is considered objectionable by the

Richmond Times because it "has become a synonym for fraud," Says The Times:

"We detest the very name" understanding clause." It is offensive to our ears to hear it; it is offen-sive to our eyes when we see it in print. It is a distress to The Times that this detestable measure is to be incorporated into the organic laws of the State. But The Times does not claim to be greater or better than the tree and noble members of the Virginia Constitutional Convention, who, like The Times, stood out as long as they could against, in section of it they have finally encoulded that a gainst, in section of the times of the times of the contraction of the Times that determined to stand with them and accept the compromise.

The New Orleans Times-Democrat says, however:

"It is claimed in Mississippi that the understanding clause has been always fairly and justly administered and not used as a trick to let in white voters and keep out negroes; and this claim has never been disproved or even seriously challenged. The test, if honestly administered, is a good one for the suffrage. A citizen who can pass muster on the Constitution and explain its principles is likely to be a good voter, even if he is somewhat deficient in his schooling."

The St. Louis Gobb-Democrat (Rep.) remarks sareastically that the Southern States" abolish the negro, but they howl when anybody bints that the representation, based upon the negro, which they fraudalently hold and use, shall be taken away from them, and the Constitution of the United States be put in operation in them, as it is in the rest of the country.

#### DEFEAT OF THE DEMOCRATIC CHAIRMAN.

THE man who managed Mr. Bryan's two campaigns for the Presidency has met similar fortune in his campaign for another term as Senator from Arkanasa, and not all the papers of his party regret it. The Richmond Times (Ind. Dem.) declares that Senator Jones "onglit to have retried long ago," and now that he has been defeated in his candidacy for return to the Senate, it believes that it would be gratifying to the party "if he would lay himself aside." In Arkanasa the people manifest their choice of a Senator at the polls, the legislature afterward ratifying the popular choice by formal yote, and in the present popular election ex-tiovernor James P. Clarke has defeated the Democratic national chairman. Mr. Jones probably "would be

not have been reappointed chairman of the Democratic national committee if he had been reelected as Senator," says the Chicago Chronicle (Dem.), for it was a "position which he was preposterously unequal to fill." The Democratic leader and manager" should be very nearly everything which Chairman Jones was not," adds the same paper. and the only good word it has for him is that "he meant well." The Nashville American (Dem.)

"Why a great party should select such a man as James K. Jones for the chairmaniship of its national committee must remain to most people an unsolved question. Perhaps the error of his selection was made with a view of harmontzing it with various others which were made under the malign influence of an evil star which rose over the party. The Republicans were delighted with Jones as chairman of the Democratic committee, and it was enough to make a Democrat swear to see the games and schemes they played on him and to hear the jokes they cracked at the expanse of Jones and the party which he represented Mark Hauma plants of Jones and the party which he represented Mark Hauma control of the party which he represented the Jones of the J

tional chairmanship. His retirement from the Senate will be no loss to the Democratic party."

But, on the other hand, his defeat is regretted by the St. Louis Republic (Dem.) and the Salt Lake Herald (Dem.), which pay tributes to his ability and honesty, It is reported that he may retain the chairmanship of the national committee. The Atlanta Constitution (Dem.) too, declares that "many thousands of

SENATOR JAMES K. JONES

national Democrats would be pained to part with the active services of Senator Jones," and it goes on to say:

"The fact that the party did not succeed in either campaign can not be accounted for by any criticism of the labors, methods, and conduct of Senator Jones. He stood to the guns of Democracy with unflinching conrage, carried the banner bravely in every assault upon the party of money and monoply, and went down in each defeat with his plume untarnished and nubent in abject surrender.

"In his retirement to private life he will carry with him the gratitude and sincerest esteem of millions of Democrats who followed him faithfully as a leader sans peur et sans reproche."

#### DEMOCRATIC DISAPPOINTMENTS IN CARICATURE.

#### ENGLAND NOT BEING AMERICANIZED.

A / E are none of us infallible, not even the youngest of us." is a saying that occurs to Mr. Herbert W. Horwill as he hears all the present-day talk about the "Americanization of the world" in general, and England in particular. "To make a splash," he more than hints, is not "the same thing as to swim," and he takes a more humorous than serious view of our idea that we are making a commercial invasion of Britain. Mr. Horwill. who is an English literary man sojourning in New York, admits (in The Forum) that the British are using American products, but he compares our jubilation to the rejoicing, three centuries ago, "when there spread along the banks of the lames River the pleasing rumor that a taste for tobacco and for potatoes had been acquired across the ocean." London abounds in restaurants with French menus and shops with French modes, but nobody claims that England is being Gallicized. So, too, "the marriages of a few peers, out of a total of nearly six hundred, to republican wives do not mean the approximation of the English peerage to American political institutions any more than similar alhances with Lordon actresses imply that the House of Lords has become an aunex of the Gaiety Theater," Mr. Horwill

"Undoubtedly there is just now ju England a great sale for American products. It is only natural that the English customer should profit by his opportunity. By the kindness of American protectionists the Londoner is able to buy such goods at a less price than that at which they are sold in New York, and he would be foolish indeed if he did not take advantage of this gen. erosity. The American tourist, too, rejoices in the sudden expausion of the purchasing power of his money. To the American lady, in particular, every tempting article displayed in an English shop-window appears in the light of a bargain; hence the popular English notion that the average American is a person accustomed to lavish expenditure. But what has all this to do with the Americanization of England? If American enterprise succeeds in causing soda-drinks and ice-cream to be regarded as necessities of life in English summers, the result will be the creation of a new habit among English people and will therefore be, in that degree, a distinct instance of Americanization. But purchases of American shoes are open to no such interpretation. It was usual in England to wear shoes before the first approach of the American invaders, and the practise will be continued after their retreat. If English people get their shoes from Lynn instead of from Northampton, they are no more Americanized thereby than they are Orientalized by getting their tin from the Straits Settlements instead of from Cornwall.

"Some of my readers will prohably have been surprised at my suggestion, in the previous paragraph, that the present commercial successes of American exporters may not be permanent. On this side of the Atlantic such a possibility is not considered seriously. It is universally assumed that to make a splash is the same thing as to swim. But let us observe what has happened even during these last five years of intense effort. Let us take the cycle trade, for instance. Every English cyclist remembers the great boom in American bicycles about three years ago, Thousands upon thousands of them were unloaded upon the nuity, their merits were expounded by smart agents, and their cheapness attracted purchasers all over the kingdom. There was an unrivaled opportunity for an immense trade, as the English manufacturers were just then feeling the calamitous results of the Hooly policy and had a hard struggle to exist. But where is that cycle trade now? Scarcely any one in England rides an American bicycle to-day. At the London shows last December, where hundreds of British firms were represented, there were not on view half a dozen makes of bicycles from all foreign countries put together. The English manufacturers have completely recovered their trade, and it is a very large one; for, altho the cycle 'craze' has died away, bicycles are in much more general use in England than in America, both for pleasure and for business. It can not be said in this case, at any rate, that American products did not receive a fair trial.

"A similar experience will befall American manufacturers of

other kinds of goods until they learn to comply with the English prejudice in favor of strength and finish."

Mr. Horwill has no wish "to deny that America has had, and is having, an important influence on English affairs"; but he avers that "the same thing might be said of every other civilized nation under the sun." He adds:

"The progress of invention during the placeenth century, by Increasing the facilities of communication, has increased the opportunities of every country for becoming acquainted with the best thought and action of every other. We are seeing the fulfilment of the ancient prediction that 'Many shall run to and fro and knowledge shall be increased.' There is now such frequent intercourse between Europe and America, between Europe and its colonies, and between the various peoples of Europe itself that it is possible, as never before, for foreign experience to be utilized for the benefit of reform and progress at home. No one will doubt that in this interchange of ideas America is contributing her fair share, particularly by the stimulating example of the vigor and industry which she has thrown into the task of exploiting the resources of a vast territory. But the time has not yet come, the many of her sons seem to regard it as already arrived, when Columbia may assume the chair of professor of everything to the world at large,"

#### RESULTS OF IRRIGATION.

ORD BYRON, who had the reputation of caring more for some other liquids than for water, remarks, nevertheless, in "Don Juan" that "till taught by pain, men really know not what good water's work," and warns the reader that in a parching desert "you'd wish yourself where Truth is—in a well." In our Western country the settler is finding that he can do still better—he can bring the well to the desert. Robert T. Hill, of the United States Geological Survey, says, in The World's Work: "The sterile and hopeless-looking soil of the desert.

MAP OF HUMID, SEMI-ARID, AND ARID REGIONS OF THE UNITED STATES.

when artificially watered, is apparently more fertile than that region where rainfall is abundant. There is no nobler spectacle than a dreary waste converted into an emerald oasis by water artificially applied, and in the desert may be seen some of the most profitable and skilful agriculture in the world. The wheat-fields of Utah and Sonora, the great cotton-farms of Coshuila, the alfalfa valleys of the Kio Grande, and the orchards of California are all inspiriting examples. The transformation made in the desert where irrigation has been possible is marvelous, and it one instance—in southern California—has resulted in the development of communities of great wealth and culture, where the ideals of perfect conditions for existence are as nearly attended as possible.

Mr. Frederick Haynes Newell, who has been continuously engaged for the last twelve years in conducting investigations of the extent to which the arid regions can be reclaimed by irrigation, ascertaining the cost and capacity of reservoirs, measuring the flow of rivers useful for power, irrigation, and other industrial purposes, and mapping the artesian or underground waters, has just written an exhaustive book on the subject. He says:

"One-third of the whole United States, exclusive of Alaska and outlying possessions, consists of vacant public land. One of the greatest economic questions before our people is that relating to the utilization of this vast area, much of which has a ritis soil and under good management is capable of sustaining a large population; while, if neglected, there will continue to be only whelly separated ranches and nomatic herdsmen. As the control of the vacant public lands is now tending, these areas are not being made available for the creation of the largest number of homes.

"This matter is one not merely of local interest to the West, but is of even greater concern to the East, and to all who are dependent upon the manufacturing and transporting interests, as well as to the farmers who supply all of these workers with food. The wildening of settlement in the West means a rapidly increas-

MAP OF VAUANT PUBLIC LAND.

ing market for goods manufactured in the East and transported to the West. With more people engaged in making the fluished articles and carrying them to the West, there comes a larger and larger demand for agricultural products, especially those raised near the manufacturing centers. In short, the prosperity of the whole country follows the uphuilding of any considerable portion."

It is reckoned that by irrigation land enough can be reclaimed to provide food and homes for a population greater than that of our whole country to-day. All the irrigation that can be done by the small means at the command of private individuals, however, is now in operation, and the further reclamation of the arid lands must be undertaken by the Government. Says Mr. Newell:

"In comparison with such a possible development every other project or public work which the Government is asked to undertake seems indeed Insignificant. The dead and profitless deserts need only the magle touch of water to make arable lands that will afford farms and homes for the surplus people of our overcrowded Eastern cities, and for that endless procession of home seckers filing through Gastle Garden.

"The national Government, the owner of these arid lauds, is the only power competent to carry this mighty enterprise to a successful conclusion, to divide the reclaimed lands into small farms for actual settlers and home-builders only, and to provide water for the settlers at a price sufficient merely to reimburse the cost of the work.

"When the plans for irrigation suggested by President Roosevelt and Secretary Hitchcock are carried out, every section of this country will be benefited. The East and Middle West will find in that regenerated empire a market for machinery and manufactured products of every description; the South will find

ready sale for the fabries of her cottonlooms; while the farmers of the reclaimed regions will send the cereal products of their acres across the Pacific to the swarming millions of the Orient."

The Homeseeker and Investor (Chicago) says:

"Eastern opponents of government aid to irrigation projects seem to labor under the mistake of thinking that the supporters of irrigation contemplate a raid on the national treasury. It is feared in some quarters that vast sums of moncy. not otherwise appropriated, are to be drawn out for improvements that are in certain respects lo-

WELL AT WOODSCUKET, SOUTH DAKETA, THROWING A 3-INCH STREAM TO A HEIGHT OF 97 FEET.

an certain respects toeal in character; that the reclamation of arid lauds is to be made a public enterprise similar to the improvement of 'rivers and harbors, and paid for out of the general fund.

"It is unnecessary at this time to determine whether the irrigation of desert areas is not two fugite as nucleo f a national public character as the innumerable river and harbor improvements that are now undertaken by the general Government. The matter now under discussion is the bill before Congress which proposes to appropriate the receipts from the sale of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid districts in those States and Territories. In other words, money realized from Government property in the West is to be used in improving that type-

"Senator Hansbrough cleared up the matter in his speech. He

"OO AWAY BACK IN THE REAR. WHEN YOUR COUNINGETS ALL HE WANTS,
WE'LL CONSIDER YOUR CASE.

"The Omaha World-Herald."

showed that, in a sense, the sections benefited would pay for the improvements; that it was a measure affecting one-third of the States and Territories of the Union, and that in thirty years at least 40,000,000 acres of desert land would be reelemend and brought indee cultivation. The project is worthy of consideration for the reason that it contemplates a great public improvement without dipping into the national treasury in a way that has been done heretofore to meet the expenses of nearly all important public works."

#### A SILVER CURRENCY FOR THE PHILIPPINES.

Tille plan of the Senate subcommittee on the Philippines to issue a silver currency in the archipelage does not receive much support from the press of either party. The committee has recommended a special coin, containing about the same quantity of silver as the Mexican dollar, to be maintained at a gold value of fifty cents. The independent papers seem a unit against the plan, and some of the Democratic press are ontspoken in their opposition. For instance, the Atlanta Constitution (Dem.) says:

"Consistency with just declarations regarding silver and its coinage into 'fity-cent' dollars does not deter the Republisa from going boldly into this new-fangled scheme. They want to win the coming elections and they are especially anxions to recover lost ground in the West. This tub to the silver whale they believe is their last and best chance to those ends.

"What the Democrats will do concerning this strange play by the Republicans can not now be foretold, but we may be sure that it will not get through the gantlet of their cruticism without full and clarifying exposure."

The Indianapolis Sentinet, the strongest silver paper of the Middle West, thinks the adoption of a silver entrency will cause "an embarrassment of commerce and possibly shortage of money when legal tender is needed," and continues:

"Moreover, it will prove an obstacle to commerce with this country to have a different sort of corn there, issued by the United States and bearing the impress of sovereignty of the United States, yet measured by a standard differing from that which measures the other coins of the United States. "The Philitage of the United States, "The Philitage of the United States, and the United States, and the United States, and the United States, and the Philitage of the United States, and the Philitage of the United States, and the United States of the United

The Republican press seem to be divided in their opinions. The New York Press (Rep.) thinks that the Bryanism as shown

FACING A BIG RESPONSIBILITY.

- The Philadelphia Inquirer.

in the Senate's currency plan "will be put out of business so far as it concerns the Phillippine currency" by sound provision made by the House. The New York Financier thinks it "would have a tendency to reopen the silver question to an extent which might have a disturbing influence upon our currency situation." and adds:

'In view of the fact that Japan and the United States have, as above noted, failed in their efforts to provide a substitute for the Mexican dollar in the Far East, the this substitute had greater value, it would seem unwise for this Government now to undertake to repeat its costly experimentation of 1873, and to provide a new coin in the expectation of its replacing the Mexican, even tho this new coin should compare favorably, as regards weight, uniformity, and workmanship, with the Mexican. The Filipinos who handle money are apparently satisfied with the coin which they have used for so long a time, and many of them, as well as the Chinese, are attached to the Spanish coins, and especially the now demonetized Ferdinand Carolus piaster, tho it weighs only 413.76 grains. In order to make the proposed American-Filipino dollar popular, limited legal-tender privileges might have to be imparted to it, otherwise it would circulate wholly on the basis of its bulliou value, as is intended by the proposed law, and be accepted at this valuation in all commercial transactions as is the Mexican coin. The Chinese would be likely to chop the new dollar as freely as they did the United States and the Japan trade-dollars, and as they have done the Mexican. Mutilation of the coin would make it valuable only for bullion, and this would destroy any legal-tender quality that might be imparted to it. In order to provide for the coinage of the new dollar, the mintage facilities in Manila would have to be improved and the metal provided for supplies of the mint unless coinage should be conducted in the United States. This would add greatly to the cost of the experiment,"

The Louisville Part (Ind. Dem.) thinks that "it will help to restore the silver States to allegiance to the Republican party, and pile a few more clods on the grave of Mr. Bryan's pet Issue." The Chicago Chronicle (Dem.) says it "is a very seusible thing to do; but the doing of it ought not to be postuped for two or three years." The Western mining States seem to be in favor of the plan. The Denver Republican (Silver Rep.) thinks the use of silver as money "will increase the use of silver dollars in the Far East, and affect the price of the metal all over the world." The Satt Lake Telgeram says.

"We hope the measure may go through. This country does not want to imitate the insane mistake of England in putting

UNCLE SAM! "Now look out, this is where I let go."

- The Minnespolis Journal.

India on a gold basis. The Orientals know nothing about gold and do not need to. Plenty of silver will spell prosperity for the Philippines, will make a market for the product of American mines, and leave us our gold volume for home uses. We have coasion for every dollar's worth of it within the United States."

#### AMERICAN VIEWS OF THE RHODES WILL.

HE new kind of education that is to be brought about by using an old institution in a new way, as provided for in the will of Cecil Rhodes, has stirred up a vast deal of comment on this side of the water. Unlike most educational gifts, scholarship is not its main purpose, and, indeed, seems to have been little considered. "Serious students who go abroad." notes the New York World, "practically always seek the German universities," but the beneficiaries of the Rhodes scholarships are to go to Oxford. Thither will go five students from Germany, a larger number, probably, from the British colonies, and nearly a hundred from the United States-two from each State and Territory. The students are to be chosen on the basis of scholarship, love of outdoor sports, manly qualities, and moral character, the latter to include the quality of leadership; and his hope was that this intermineding of British, German, and American youth will in time lead to such "a good understanding between England, Germany, and the United States" as "will secure the peace of the world." Each student is to receive \$1,500 a year for three years, a sum that is expected to be sufficient to pay all the expenses of the college year.

Mr. Rhodes's scheme "shows, to begin with," observes the New York Evening Post, "the confidence of a very shrewd and absolutely unsentimental promoter of vast financial schemes, in what is usually regarded as a dilettante and ultra-academic education," and the New York Tribune recalls that Rhodes once had a similar plan for "a great South Africau university, which should receive young men from the Cape, from Natal, from Rhodesia, from the Transvaul, and from the Orange State, and by educating them together should inspire them with a community of thought and thus powerfully conduce to the harmony and unification of South Africa." "Others have given more " for educational plans, remarks the Pittsburg Gazette, "but the bequest of the colossus is the only one looking to international unitythe only one with a distinctly political aim and purpose, tho using for its accomplishment the same means as are used by the others for human good,"

Yet some objections are heard. The idea "seems somewhat visionary," thinks the Pittsburg Post, and the New York American and Journal says: "Cecil Rhodes's will shows his noble side, but the world is not to be revulutionized nor the stream of its political and economic tendencies to be deeply affected by college scholarships." "No one man, however influential, resourceful, and opplent, can contribute very much to the 'good understanding of nations, declares the Philadelphia Ledger, and it adds that "the tides in the affairs of men sometimes run much too strongly toward international misunderstandings for the collective efforts of all peaceably disposed persons to stay or sensibly moderate." It occurs to the Philadelphia Press and the New York Times that Mr. Rhodes might have furthered his purpose still more by providing for the bringing of English, German, Australian, and South African youth to American universities, and they ask what Americau of great fortune will supply this lack.

Seamen's Opinion of the Ship Subsidy.—Many persons may believe that the seamen of the United States approve of the ship subsidy bill, but the impression that The Coast Scanner's Journal gives is that those on the Pacific coast are against it. This journal is published weekly in San Francisco

by the Sailors' Union of the Pacific. Commenting on the passing of the bill by the Senate, it ironically congratulates that branch, but it hardly knows "whether upon its indifference to public sentiment or upon its subserviously to political policy." It adds:

"The overshadowing point is that the highest legislative body of the country has keen hoodwinked or dragoned into the adoption of a measure which throughout its long course has been emphatically condemned, the more strongly the better it has been known, by almost every element of press and public. The only elements that have aver favored it are those which stood to print immediately by it and a few papers afflicted with protection mania."

"Upon what meat doth this our Senate feed, that it hath grown so great in its contempt for the country?" the same paper asks. It seems wrought up over two facts: first, that the statement of purpose, in the original subsidy bill, to "provide seamen for government use when necessary," was changed in the Prys subsidy bill to "To provide for ocean mail service between the United States and foreign countries, and the common defense, to promote commerce and to encourage the deep-sea fisheries"; and, secondly, over the defeat of the amendment to employ Americans in preference to Chinese in the Pacific trade:

"The final action of the Senate was a fitting clinax to a long course of bald-headed humbug. However, the ship subsidy bill is not yet law. It has another river to cross. Before it gets through the hands of the gentlemen in the other wing there will be a good deal more said on the subject."

It is reported on reliable authority that the Amalgamated Association of Bulgarian Brigands has petitioned the Sublime Porte for a subsidy, There is nothing new, of course, in the arguments advanced. The petitic sets forth the number of men employed, the high rate of wages, and the consequent high standard of living, and the amount of business done, which shows a gratifying increase over the corresponding period of any preceding year. It is pointed out, however, that this phenomenal prosperity, now the wonder of the world, can not continue without government aid. Without a subsidy, it is claimed, the Bulgarian brigand must quickly sink to the level of the pauper brigands of Greece and Sicily. The attention of the Sublime Porte is also called to the fact that the money earned in this industry remains in the country and is spent to davelop the home market, In this respect it differs radically from the money, if any, used to pay creditors, which is at once sent abroad. It is even suggested that if the subsidy were made large enough the Bulgarian brigands might be able to live on it in comfort without robbing any foreign travalers at all, thereby increasing the popularity of Bulgaria among tourists and relieving the Sublime Ports from the possibility of grave international complications. The Sultan is said to have received the Bulgarian deputation graciously and expressed his regret that, in the present state of Turkish finances, there would be nothing doing .- Prot-

#### LETTERS AND ART.

#### A MOVEMENT TO DEVELOP SOUTHERN LITERATURE.

A T a convention of Southern men held recently in Charleston, S C., a movement was inaugurated to establish a vast book manufactory and publishing house in the South. A general committee on organization was appointed, consisting of several of the foremost men of each Southern State. Atlanta was glosen as provisional headquarters, and the city in which the factories and corporation will be established will be decided upon later. The capital is limited to \$5,000,000; and operations are to begin when ten per cent, is paid in. Each State will have a director upon the board, and it is hoped to unite a strong body of business men and educators. William C. Chase, chairman of the general committee on organization, is quoted as fellows in the Atlanta Journal:

No private concern can possibly cope with the present condi-The sole hope of successful competition rests in the establishment of an enterprise owned and controlled by the general public, whose interests it is necessarily formed to protect

"Southern men will no longer delegate the molding of thought and education to those who have for fifty years persistently, even crnelly, ignored the desires and interests of Southern people. During all of these years, in which these concerns have been callous to appeals and threats abke, the South has suffered injuries that are beyond possible excuse or pardon. Millions of money have been taken for books that were often offensive to the people.

"The South has advanced as no other section of the Union in the development of her material resources, but by neglecting her mental resources and failing to encourage the abilities of her people, she has lost fully fifty years of advantage; and instead of controlling the forces of literature and learning in America as she did fifty years ago, she is looked upon to-day as the weakest portion of the Union; and finds herself, as to education, etc., the object of charitable concern of other sections of the Union, and is paying dearly and bitterly the tribute of her prodigality. These are plain words, but the situation demands blunt facts,

"In the direct matter of text-books for schools, the South is in bondage, practically. The present generation is, if anything, more servile to text-books than its predecessor. The books used relate so little of the South that, like unlettered races, our real story is mere tradition, handed down from father to son and mother to daughter.

"One of the leading statisticians of the South has asserted

that we have to-day one hundred capable writers in the South to one a half a century ago; and as we guided the national thought at that period, could our writers of the present find recognition, through some great publishing house, we would again enjoy the envied prestige.

"The literary lethargy existing in the South, and the pitiable lack of appreciation of the efforts of Southern writers, is due to the fact that the manufacturing and publishing of books are almost entirely controlled by concerns outside of the South. These concerns accept only such manuscripts as commercially and, worse still, politically, conform to their views,

"The South has produced over 10,000 writers, orators, and statesmen, physicians, divines, artists, musicians, lawyers, inventors, financiers, and other men and women of conspicuous talent, ability, and genius; but we seek in vain to find any considerable number of them included in the list of eminent Americans in any line of achievement. The persistence in ignoring the South by the publishers in common merits the rebuke of the entire country, and that it will be properly dealt with there can be no doubt

"Fifty years of Southern effort will now take the place of the lost half-century marked by idleness, and worse-neglect. In 1950 those who are so fortunate as to live in the South will enjoy the distinction of possessing a literary and educational excellence equal to the superlative of any people on the globe. All lands will be honored to have in their homes and schools books written and published in the South. Compare such a brilliant gratification to the gloom of to-slay,"

The plan outlined is not viewed with approval by the Northern press. The New York Sun thinks that "the consequence would be that Southern literature would suffer in the general esteem. rather than be benefited, by the attempt at artificial stimulation, A literature must grow of itself; it can not be forced by hothouse methods." The New York Times Saturday Review declares that the whole enterprise is a typical illustration of ' provincialism." "There is no such thing as 'Southern literature, " it says:

"There are Southern writers who have taken Southern subjects and produced literature. But, just in proportion to the success with which they have treated them, their works transcend local lunitations and become part of the literature of the English language. As a matter of fact, writers of Southern birth or residence, who have taken their themes from their surroundings, have been, during the last generation, among the most important contributors to American literature. But we gravely doubt whether any of these will be found on the 'list' of the Southern publishing company. We can not imagine that Mr. Cable, or Mr Page, or Miss Murfree, or Miss Johnston, to

ì

name the latest recruit to their ranks, or even Mr. Harrs, to mane a writer who happens to live in Adianta, would care to marrow their field or their pretensions by publishing in circumstances which would seem to constitute an appeal to readers on the ground of a local patriotism rather than of literary merit. It has been observed in world's fairs that no exhibitist will allow her products to be exposed in the 'Woman's Building,' provided she can get them exhibited anywhere else, where they will be entered in a wider competition, and held subject to more general standards. Similarly, we should not expect a writer to destree our work of the subject of the control of the subject of the sub

# EDMUND COSSE'S ESTIMATE OF VICTOR HUGO.

VICTOR HUGO died on May 22, 1885, and the elaborate and impressive celebrations in Paris a few weeks ago were held, as all the world knows, in commemoration of the hundredth anniversary of his birth. Edmand Gosse, however, the eminent English critic, suggests that it is hardly appropriate to "speak of any one as dead until his voice is silent," and he declares that to him at least this centeursy seemed to mark the solemn funeral, at the age of one hundredl years, of Victor Hugo. Every year since 1885, he observes, "the ghost of Hugo has published a thick new volume in prose and verse," and only with the last book of poems, completing his posthimous works, can it be said that the existence of this writer, as a living force, has ceased. Mr. Gosse (witting in The Cosmopolitan Magazine, April) continues as follows:

"To the ninctcenth century in France he [Victor Hugo] was what Voltaire had been to the eighteenth. That is to say, an absolutely momentous power, extending so far in so many directions as to pass outside the bounds of convenient definition. To ask whether Hugo had any influence on letters in his own country is like asking whether, if the Atlantic Ocean were let into the Great Sahara, it would have any influence there. In the first place, he was original to a quite extraordinary degree. It is difficult to point to any modern writer, at least any writer of the last two centuries, who owes so little to preceding forms of expression as Hugo does. He cultivated a sort of graceful fealty to Vergil, which was rather like the tribute of a dish of fruit which some great chieftain may think it courteous to send once a year to a nominal head of his clan; but, as a matter of fact, Victor Hugo owed little or nothing to Vergil. In his own country he had been preceded in his revolution against the prevailing languor of poetry by Chateaubriand, by Lamartine, by Vigny; but when the moment came and the age was ripe, it was the trumpet-uote of Hugo's celebrated formula, and not the voices of his elders, that broke down the walls of the classical Jericho, . . .

"There are many reasons, which even an Anglo-Saxon can appreciate, for the amazing vogue of Hugo. He has had thousands of imitators, but not one of them has contrived to give anything of the Hugonian impression of life in its fulness. Hugo sees everything enormous and distended, exuberant and colossal, but he preserves alongside of this dangerous tendency a sense of harmony, almost of logic, which prevents it from being too obviously preposterous. We are prepared to laugh, but something makes us grow serious as we listen; the smile dics away and we kindle with admiration, terror, and joy. It is the evidence of splendid vitality which carries us on, which drags us unwillingly in the train of Victor Hugo, which induces us to throw up our hands and resign ourselves to this tremendous and astounding tide of energy. If he seemed to force the note, or, as people say, 'worked himself up,' we could easily turn from him with a smile, with a shrug. But that is impossible. The spontaneity of the man is irresistible. The fountain of his song leaps and gushes and flows forth in all directions; we can but sail upon it. It takes us out of sight of shore, it tosses us on that luminous and buoyant ocean which is the personal genius of Victor Hugo. This extraordinary amplification of everythingin which the pig becomes a rhinoceros, the lizard a erocodile, and

the breeze a simoon—was noted as early as 1826 by Sainte-Beuve as a danger to Hugo. But it really proved to be one of the most nescful and the most predominant of his characteristics, and ot immense advantage to his influence."

Not the least part of the literary achievement of Victor Hugo, Mr. Gosse declares, were his lyrics, written while he was still young, "some of the most refined that were ever composed, so

AN EARLY PORTRALL OF VICTOR BUGO

This portrait of Victor Hugo is interesting because it shows him at the realized his fame and creative power. It is a remarkably fine example of the art of photography in the years of its infancy, being taken in 1853 during the poet's exile in Jersey.

human and sweet, so melodious and simple, that the eyes fill with tears of pleasure to read them." He adds:

"I think that the ordinary reader of Hugo, even in France, has a little forgotten what manner of singer he was from 1830 to 1840, and how great a part of his influence was built up upon his devotion to beauty, upon the intoxication of his exquisite and unobtrusive melodies. He went much farther than this; he became one of the wonders of the age. He grew to possess such sovereign power over language that Shakespeare alone was his equal in the transfiguration of images and the processional pomp of metaphors. He reached such a point of mastery over the abstruct idea that he realized the gift of Mephistopheles to Faust, and every thought, every aspect of mortality, appeared to him at will clothed as a concrete object with color and light and form. After the downfall of the empire-and even for some years before it-Hugo became an accredited seer, a sort of unofficial Ezekiel or unattached Isaiah. But he never, or seldom, regained those 'wood notes wild 'which had thrilled his earliest admirers with ecstasy, and from which all that is most truly poetical in the literature of France for the last seventy years is lineally desconded '

In view of the wonderful influence of Hugo over Freuch literature, it may seem strange that he has made so little impression upon English and American poetry and prose. "Heine, Tolstoy, and Ibsen," Mr. Gosse confesses, "during the same half-century, have left a far deeper impact upon Anglo-American literature than Victor Hugo." The reasons for this are given by the English critic as follows:

"The reforms which Hugo carried out between 1827 and 1835

were momentous in France, because they were extremely needed. but they were without importance to England, because England no longer required them. The gates were closed in France; they were massive portals of solid bronze, and needed the strength of a Hercules and the vigor of a Samson to break them in. Victor Hugo rose in his giant energy, and, with a song that was like a blast on the trumpet at his lips, he advanced and battered them down. They fell, with a clangor which echoed through the whole of France and far into the neighboring Latin kingdoms. But in England, in 1830, there were no gates to batter. All the business of breaking down the classic barriers had been done thirty years carlier by Wordsworth and Coleridge. 1f France had produced her 'Lyrical Ballads' in 1798, she would not have required her' Feuilles d'Automne 'in 1831. If she had borne the brunt of Romantic battle under Byron in 1812, if she had endured the ecstasies of liberated song with Shelley in 1816, if the harmonious secrets of antiquity had been revealed to her in perfect form by a Keats in 1820, the feeling with which she greeted the dramas and lyrics of Hugo would have been full of admiration and joy, but not of astonishmeut. These books would have delighted every instructed reader, but they could not have caused a revolution.

#### A PLEA FOR AN "ORGANIZED" THEATER.

A T the close of a memorable journey of the Comedile Francaise to England in 1878. Matthew Arnold wrote a characteristic essay in which he took the view that the visit of the Freuch company would be fruitless unless it left Englishmen with a strong desire to "organize" the theater. Brander Matthews, professor of dramatic literature in Columbia University, sees the same need now as then for the "organization" of the theater in the English-speaking world, and points to the revival in England of the demand for a national theater as an evidence of renewed interest in this question. At the same time, he is far from ready to admit that there is any sections decline in the modern drama. He says (in The North American Neview, March);

"Apparently the theater is flourishing; never were there more playlouses than there are to-day, and never were these various places of amusement more thickly thronged with playgoers, pleased with the entertainment proffered to them. There is no denying the sumptiousness, the propriety, and even the beauty of the scenery and costumes and decorations set before us on the stage nowadays. There is no doubt that we have many opportunities that the set of the sceneral control of the sceneral control of the sceneral control of the set of th

In the light of these facts, it may be inquired: What need is there for any modification of the situation? Why can not not the stage be let alone to take care of itself? To these questions Professor Matthews replies that the serious defect in the theatrical management of to-day is that it is "governed too much by purely commercial considerations," and that dramatic art "is the only one of the arts which is compelled to pay its own way, and which is forced to make its own living under conditions which limit its exertions to what is immediately profitable." He continues:

"So long as the theater is left to the operation of the law of supply and demand, it is idle to look for a manager who will make it his business to produce plays which he knows can not be forced into a long run, and who will take pleasure in presenting the masterpieces of dramatic literature as they ought to be presented. Without a subsidy or an endowment of financial support of some kind, he could hardly hope to pay his expenses... The manager has to present the kind of play which is calculated to be likely to shrink from the kind of play which would appeal to be likely to shrink from the kind of play which would appeal to a small public only, whilct can not be forced into a long run, and which does not lend tiself to circus-methods of booming. In fact, the conditions of the theater being what they are now in New York and in London, the wonder is that the level of the stage is not lower than it is actually, and that the more intelligent playsgoers ever have an opportunity to see anything other than spectacle and sensation. That we have a chance now and then to behold plays of a more delicate workmanship and of a more poetic purpose, is due partly to the courage and the ambition of certain of the actors and actresses, seeking occasion for the exercise of their art in a wider range of characters."

In considering remedies for the evils of the present theatrical system, Professor Matthews takes the view that state aid, in this country at least, is neither desirable nor possible, and he cites the government building at the Chicago World's Pair as a disastruss example of government incompetency in the domain of the fine arts. Municipal endowment is open to the same objections. "No bover of the drama," asys Professor Matthews, "would face with composure the prospect of a municipal theater in New York, where Tamunany could turn it over to the control of some uncultured spolsmans." He adds:

"It is not by seeking government aid that the problem of the theater can be solved in the Untel States or in Great Britant. Those who wish to do something for the drama must rely on themselves, taking pattern by those who have been able to accomplish wonders for the elevation of music. When this decision is once reachel, the question is assier of answer. What is it we really want, after all? We want to find a retort to the manager who tells us that he can not afford to attempt certain more delicate forms of dramatic art, or to present the masterpieces of the drama as they ought to, be presented. We want to help this manager to accomplish that which the existing purely commermental to the second of the second of the drama, just as the owners of the Metropolitan Opera-House came to the aid of the opera.

"The same problem presented itself in Vienna and in Berlin, In spite of the fact that there were state-aided theaters in both cities; and the solution discovered by the Germans is at the service of the Americans and the British. It is very simple, but it is perfectly satisfactory. A body of subscribers raises a sum of money sufficient to pay the rent of a theater, and they then turn the theater over rent-free to a manager who will pledge himself to conduct it along certain lines, and to accord certain privileges to the subscribers. The manager will try to make the theater pay him a profit, and he will try to attract the public; but it will be rather the smaller public that likes the better class of play than the larger public that is more easily pleased by sensation and by spectacle. With a subsidy equivalent to his rental, the manager would bind himself to give up the habit of unbroken runs,-the practise of acting the same play six and seven and eight times a week. He would be able to return to the earlier custom of the English-speaking theater,-that of a nightly change of bill, such as we still expect at the opera and such as we find at the Théâtre Français in Paris, at the Lessing Theater in Berlin, and at the Volkstheater in Vienna."

The promoters of such a plan as is here outlined, declares Professor Matthews, should be "practical men, taking a commonsense view and trying to improve the conditions of the actual theater." The greatest difficulty before them would be that of finding a "fit manager, who must be a man of taste, of tact, of experience, of executive ability, and of sufficient means to support the enterprise." Professor Matthews concludes:

"These suggestions may seem very commonpline: and it may be confessed at once that they are not epoch-making. They do not point toward any theatrical Utopia, nor do they promise any dramatic millennium. They propose to make an easy beginning, in the belief that the best way to get the attention and the assistance of the public-spirited is to show that an improvement is actually possible. When interest is aroused by the realization of a modest program such as is between the first in the limit to the more ambitions. If the theater here outlined were successfully exclusible of in New York, and if it had proved its utility, the first step would have been taken along the right path.—at the end of which there might boom an American rivial of the

Theatre Français. This is a prediction which one need not be afraid to make, in spite of George Eliot's remark that, 'among all forms of mistake, prophecy is the most gratuitous.'"

#### "WALT WHITMAN'S CHILDREN."

THE intimate personal relations of any man or woman are matters about which the outsider as a rule can know but little, and about which he institutively feels that he has no right to inquire. At the same time, remarks Edward Carpenter, the radical English poet and essayist, "one can not help being conscious that a person's general relations to the subject of sex are an important part of his temperament, personality, and mental outfit—so important that it is difficult or perhaps impossible to get a full understanding of his character without some knowledge on this side; and one feels, for instance, that a biography which ignores it is far from complete." Going on to speak of Walt Whitman, whom he knew personally, Edward Carpenter says (in The Keyformer, Lundon, February):

"In the case of Whitman, whose writings deal so much, both directly and indirectly, with the subject of Sex, it seems all the more natural to wish to have some general outline of the author osciller, if rightly conceived, would be helpful toward a true understanding of the poet.

"There is, however, curiously little known in this respect about Whitman's life. Every one is aware that he was never married—that is, in any formal or acknowledged way. His life after the Civil War was colouded by intermittent paralysis, his life ing with it invalidism and infirmity; and of his history before this arrival in Washingtou, i.e., prior to the age of 44 or so, the period when he would be most likely to knit up such relations—out the barest contline is knowled;

"Leaves of Grass," that extraordinary piece of self-revelation, gives us the mential attitude of the author. . . . It would not of course be reasonable to suppose that all the personal atterances, of acts done, of passions expressed, of experiences lived through, or of individuals loved—which are to be found in "Leaves of Grass—are to be taken as literal records of things which actually happened to the author himself. They could hardly be gathered into a single life-time. Yet one can see that they are to be taken as experiences, sither actual or potential, for which his inner spirit was prepared—and as a record of things which be could freely accept, understand, and find place

At times, observes Mr. Carpenter, one can hardly avoid the conclusion in reading certain passages of Whitman's poetry that he is describing actual occurrences in his own life, "In a life so full and rich as Whitman's there must have been many intimate personal experiences, of which the world knows nothing, and will know nothing." He continues:

"He [Whitman] has himself told his friends that he had children—and in a letter to J. Addington Symonds (dated 10th August, 1890), he mentioned that he had had six. . . . . . .

"On the other hand it would be a rash, and I think a wrong, conclusion to suppose that because Whitman had several children (out of the bounds of formal marriage), he was therefore a dissolute and uncontrolled person, much given to casual ligisons with the opposite sex. We know nothing, as I have said, of the circumstances which led to these connections, nor have we the material for passing any judgment of the kind referred to-even if we were so disposed. We know at any rate that in his later life Walt was singularly discreet, almost reserved, in his relations with women; and in that very interesting interview with Pete Doyle, which is given by Dr. Bucke in his edition of 'Calamus' -one of the best running accounts of Walt which we have -Pete says in one passage: 'I never knew a case of Walt's being bothered up by a woman. . . . Walt was too clean, he hated anything which was not clean. No trace of any kind of dissipation in him. I ought to know about him those years-we were awful close together.

In conclusion, Edward Carpenter remarks on Whitman's warm

friendships for men, declaring that "in his poems we find his expressions of love toward men and toward women put practically on an equality." On this point he says:

"Whether this large attitude toward sex, this embrace which seems to reach equally to the male and the female, indicates a higher development of humanity than we are accustomed to a type super-virile, and so far above the ordinary man and woman that it looks upon both with equal eyes; or whether it merely indicates a personal peculiarity—this and many other questions collateral to the subject. I have not touched upon. It has not been my object, in making these remarks to enter into the personal personal control of the personal personal personal collations, and the personal persona

#### SCIENTIFIC PREDICTIONS IN FICTION.

MR. H. G. WELLS'S new book, "Anticipations," in which an attempt is made scientifically to prophesy the development of civilization during the next century, opens up an interesting field for speculation and has suggested to several writers the important part that fiction has played in forecasting the triuniplis of science. A correspondent of the London Pall Mall Gazette recently called attention to "a very clear prevision of Marconi's wireless telegraphy" in a drama by Calderon, the Spanish dramatist. The passage referred to may be freely translated as follows: "They say that when two instruments are properly attuned together they communicate to each other the wind-borne echoes; touch the one instrument, and the winds excite its fellow, the none be near it." A much closer approximation to Marconi's discovery, however, is to be found in the writings of a contemporary of Calderon, Strada, the learned Jesuit historian, whose "Prolusiones" were published in Rome in 1624. Says the London Spectator :

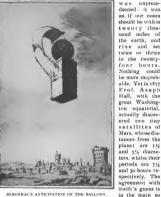

"Strada tells us how two friends carried on their correspondence 'by the help of a certain lodestone, which had such virtue in it that if it touched two several needles, when one of the needles so touched began to move, the other, the nt never so great a distance, moved at the same time and in the same manner.' Of course the modern reader sees in this a premonition of our telegraph, in which the electric impulse, propagated in the older fashion along a wire or in the new way by a simple radiation in the other, causes a magnetic needle to move according to the signals transmitted by the sender of the message. Strada went on to describe how these two friends made a kind of 'alphabetic telegraph, ' as one of the predecessors of the telephone was called, -a dial-face with the letters of the alphabet round its edge, and a needle in the midst which could be made to point to any of them at will. These correspondents saw no need for wires, or even for the simpler apparatus which Mr. Marconi requires. 'When they were some hundreds of miles asunder, each of them shut himself up in his closet at the time appointed, and immediately cast his eye upon his dial-plate. If he had a mind to write anything to his friend, he directed his needle to every letter that formed the words which he had occasion for, making a little pause at the end of every word or sentence, to avoid confusion. The friend, in the mean while, saw his sympathetic needle moving of itself to every letter which that of his correspondent pointed at. By this means they talked together across a whole continent, and conveyed their thoughts to one another in an instant, over cities or mountains, sens or deserts.' Even Mr. Marconi has not yet attained such simplicity as this, tho Professor Ayrton (as we lately pointed out) believes that we shall reach an even higher standard one day.

A classical instance of movelists "intelligent anticipation" of future scientific discoles as afforded by Swift in "Gullleer's Travels." In the third part of that work he describes the discovery of two satellites of Mars by the Laputan astronomers. The Spectator comments:

"When Swift wrote, astronomy had not advanced greatly beyord Huygens's contentment with the twelve bodies-six plan-

[April 12, 1902

ets and six satellites-which made up the 'perfect number' of the solar system. Certainly no one suspected that Mars had moons of its own. Thus Swift made a very wild guess when he announced of the Laputan philosophers: 'They have likewise discovered two lesser stars or satellites, which revolve about Mars, whereof the innermost is distant from the center of the primary planet exactly three of his diameters, and the outermost five; the former revolves in the space of ten hours, and the latter in twenty-one and a half.' Not only were there no grounds for the prediction of two satellites, but such an estimate of their distance from the planet

BURGERAC'S ANTICIPATION OF THE BALLOON ... From a 12th Century Engraving. Courtesy of The Era (Philadelphia).

remarkable that it is hardly possible to ascribe it to mere accident; and yet these satellites are the merest points of light, which no telescope in existence before Herschel's day could possibly have shown.

Many other similar anticipations are chronicled in the Philadelphia Era (April). We quote as follows:

"The law of gravitation was announced by Newton in the year 1685. Had it not been foreseen by Shakespeare in 1609? At all events, in 'Troilus and Cressida,' he put these lines into the mouth of Cressida:

> But the strong base and building of my love Is as the very center of the earth Drawing all things to it.-Act lv. sc. s

"A contemporary of Shakespeare, Ben Jonson, anticipated the modern air-cushion. In 'The Alchemist,' he makes Sir Epicure Mammon, in enumerating the pleasures to be his when in possession of the philosopher's stone, declare that

I will have my beds blown, not stuffed; Down is too hard.

"In another play the same author credits the Dutch with an invention that foreshadows the Holland submarine boat :

> It is an automa, rous under water. With a snug nose, and has a numble tail Made like an auger, with which tail she wriggles

Between the coars of a ship and stoke it straight.
"In France, Cyrano de Bergerach wed himself full of scienfic prescience. The air-ship in which the hero of his 'Voyage tific prescience. to the Moon' (1650) made his trip to that sphere was a pretty close foreshadowing of Montgolher's balloon, as will be seen from our illustration, made for an edition that long antedated the aeronant.

"In the same book he clearly foreshadowed the phonograph.

"The supernatural being who acted as the hero's guide gave

him for his entertainment some of the books made by the inhabitants of the moon. They were enclosed in boxes. This is what he saw and heard:

"On opening the box I found inside a concern of metal, something like one of our watches, full of curious little springs and minute machinery. It was really a book, but a wonderful book that has no leaves or letters; a book, for the understanding of which the eyes are of no use—only the ears are necessary. When any one wishes to read, he winds up the machine with its great number of nerves of all kinds, and turus the pointer to the chapter he wishes to hear, when there comes out, as if from the month of a man or of an instrument of music, the distinct and various sounds which serve the Great Lunarians as the expression of

'Among Fénelon's Fables, written in 1600 for the instruction of Louis XIV, 's grandson, is one entitled 'Voyage Supposé, ' and among the supposititious marvels of which it is compact we read; 'There was no painter in all the country, but when they wished the portrait of a friend, or a picture representing some lovely landscape or other object, they put water into large hasins of gold and silver, and made this water face the object they wished to paint. Very soon the water would congeal and become as the face of a mirror, where the image dwelt ineffaceably. This could be carried wherever one pleased, and gave as faithful a picture as any mirror, "

"Is not this an anticipation of photography?"

Great men of the imaginative temperament, observes The Era, build better than they know; and "the world looks back and sees what they were striving for, what they were aiming at, tho they themselves knew it not, or only dimly recognized it."

#### THE BOOK BAROMETER.

"HREE new novels-"If I were King," "In the Fog," and "The Fifth String "-win a prominent place in the bookdealers' reports for the month ending March 1. The librarians' reports show but slight change when compared with those of the preceding month. We quote the appended lists from The World's Work (April) :

#### BOOK-DEALERS' REPORTS.

. The Right of Way-Parker. 16. Mrs. Wiggs of the Cabbage Patch s. The Man from Glengarry-Con--Hegan.

The Cavalier-Cable. 8. Cardigan - Chambers. Lazarre-Catherwood. 10. The Velvet Glove-Merriman.

#### SCIENCE AND INVENTION.

#### DO PLANTS POSSESS MINDS?

THE answer to this question depends largely on definition. If we regard manifestations of mind as including all phenomena of movement adapted to environment, doubtless we may answer it in the affirmative. If we include only conscious movement, the answer must be more doubtful; yet here again we must settle on our definition of consciousness. It is certain that the movements of vegetable life are much more complex and much less accidental and mechanical than the ordinary observer thinks. It seems at time as if plants had the power of seeking what will benefit them and avoiding what will injure them, in the same way, altho not with the same freedom, as animals. Francic Darwin, son of the great naturalist, is one of the best recent authorities on this subject, and he sets forth his views of it in an article published in the Reune Sexentifique.

Mr. Darwin notes at the outset that to consider power of movement as a characteristic that distinguishes animals from plants is confusing. Trees, to be sure, are stationary, in the sense that they are rooted to one spot; but they can and do move within limits. Huxley said that a plant is "an animal shut up in a wooden box." If its stem is piaced horizontally it begins at once to curve upward as if it were comfortable only in an upright position, and as if its disquietude manifested itself in an attempt to assume that position. This power it is that enables trees like the pine to grow so straight, and it seems to consist in a wonderful sensitiveness to gravitation. The plant, as it were, feels the direction of the earth's center and governs its growth accordingly. The mechanism of this action is yet undiscovered; possibly alteration of pressure causing loss of balauce in the protoplasm will explain it. It is evident, however, that gravitation does not act as a direct mechanical cause, for, if it did, the root and stem should follow the same direction, instead of opposite directions. Gravitation acts, in fact, only as a sort of external stimulus.

Mr. Darwin believes that this stimulus need not even act on the part of the plant that responds to it. A crumb of bread in a man's throat makes him cough; in other words, irritation of the throat causes contraction of the abdominal muscles. So in plants we may distinguish, says the writer, a region of perception and one of motility, and we are led to conclude that there must be some connection between the two corresponding to the nerves of animals. It has been shown that in the case of plant-movement toward the light it is the action of the light on the tips of the stems that causes the motion, for if these are shaded the motion does not take place, the all the rest of the plant is illuminated. So, too, Peffer has demonstrated that, in the case of movements due to gravity, the tip of the root is the sensitive noist.

The interesting hearing of all this on the question of resemblance between plants and animals is clear. This action in one part of the organism due to stimulation of an entirely different part is of the same type as actious, in animals, that are usually regarded as psychical. Have plants the germs of minds, then? I Have they a sort of consciousness? That depends on the position of view and on one's definitions of these things. Says Mr. Darwice.

"The properties of which I have spoken have been compared to instinct, and altho I prefer to call them refex actions, it is because the term 'instinct' is generally applied to actions that have an indubtable mental basis. "I do not wish to be understood as saying that in plants we find nothing that can be interpreted as a germ of consciousness—nothing psychical, to use a convenient term; but it is our duty to explain the facts, if possible, without supposing a physiological resemblance between plants and human beings, for fear of falling into anthropomo-nbism or sentimentality, and in obedience to the law of machine mentality. And in obedience to the law of machine mentality, and in obedience to the law of machine means the sentence of the law of machine means the means of t

mony, which forbids us to look to higher causes to explain an action, when those of inferior order will suffice.

"The problem presents itself clearly as possible of treatment by the evolutionist method; for example, by the application of the principle of continuity,

"Man comes from an egg, and we can suppose that the protoplasmic germ that gives him birth possesses a quality that develops into the form of consciousness. By analogy, we may suppose that other protoplasmic bodies, for example those found in plants, have at least the basis of similar qualities, . . . We may also maintain that if a portion of protoplasm may accomplish the essential functions of life without any appearance of consciousness, the supposed value of consciousness in man is but an illusion. This is the doctrine of animal automatism so brilliantly set forth by Huxley [in 'Science and Culture ']. Without entering further into this question, I will simply say at present that there is nothing nuscientific in classing plants and animals together from a psychological standpoint. In this I rely on the opinion of a well-known psychologist, Mr. James Ward, who reaches the conclusion that mind 'is always implied in life,' The same author remarks that 'it would be scarcely going too far to say that Aristotle's conception of a piant-soul . . . is tenable even to-day; at least, as tenable as a notion of this kind can be in an epoch when souls are no longer in the fashion."

"Here is opportunity for an investigation that I am quite incapable of carrying out. It is better for me to regard plants as vegetable automata, just as certain philosophiers look upon man as an automator, but this does not sairly me, and I hope that other hiologists will also find insufficient a point of view from which consciousness is only an accessory product, an automate, which consciousness is only an accessory product, an automate the value of consciousness in the economy of living organisms. Doubtless the facts that we have examined will contribute to the elaboration of this larger psychologic conception."—Translation made for Time Literaacy Discis.

# THE MEDICAL TREATMENT OF MINOR AILMENTS.

A COLD or an attack of indigestion is a "minor ailment" to the physician; but to the one who is suffering from it, it may be very important. The victim may easily undergo more inconvenience and even actual pain than he would it his mailarly were a rare and interesting one. In The Lancet (March S), a plea is made editorially for the study of such diseases. Our hospital training, the writer points out, is deficient in that it accustoms the practitioner to somewhat abnormal conditions. The aches and pains of every-day life are not treated there, and when the young doctor comes in contact with them they are strange to him. Says the writer:

"No revelation is more perplexing to the young practitioner fresh from hospital work than this-the majority of his patients seek his aid on account of ailments which were not seen, or were thought of little account, in hospital work. Instead of finding that for every case with which he is confronted he can at once remember a parallel supplying him with confidence in his treatment of his patients. He realizes to his surprise that now for the first time he is called upon to deal with some common ailment of which he has often heard, from which, indeed, he may have suffered, but to which he has never had his attention directed during his days of pupilage. His ingenuity in devising suitable treatment becomes at once subjected to a severe test. Oualities are asked of him for which he has hitherto had little need, and thus it happ as often that coolness and tact, if based on sufficient knowledge, may lead the practical young man to early cent knowledge, may read the plactical young man to early success that may be denied to the 'best man of his year,' who, with a large amount of de the knowledge, lacks the accessory qualities which permit this to be brought into play in private

"Recent correspondence in our columns on the treatment of the commou cold and the removal of the insightly wart would in itself suffice to show how great an interest for practitioners may center round in subject which the text-book or the lecturer on medicine passes by with a word or two. Minor allments are common allments. Common allments provide the bulk of practive; while in it are cases that loom large in the student's eye, and it is marted to be supported to the student's eye, powdet text lectures and demonstrations. Yet these common aliments should provide as much food for reflection as the most elaborate medical problem. The common cold is not more easily explained than the etiology of perticions anemia, and Friedreck's herelitary attaxia is aliments as amenable to treatment as eatening the students of the property of the property of the property and the students as a gentle provided that the property attaxia is aliments as amenable to treatment as eagentle provided that the property of the provided that the

about the more high-sounding diseases, for every one who attempts to surfacel the equality obscure problems of a so-called simple complaint. This is a practical error, for surely that disease which affects the largest number ought to be grappled

with first."

# HOW THE AMERICANS HAVE CLEANED HAVANA.

THE city of Havana has so long been considered as a sort of unrery of diseases that it is hard to realize that it is now more healthy than Washington and many other cities on the American continent. In 159, the year of least yellow fever during eleven years, 1559, 1599, 101 persons died in Havanu of that disease. The average for the eleven years was 440 fatal cases. In 1901, for the first time in the history of the city, the yellow fever season—April 1 to January 1—passed with only five fatal cases of the disease oecuring. October, November, and December, 1991, the months during which the fever used to be most prevalent, came and went whitout a shigle case. These facts

we owe to nu article in *The National Geographical Magazine* (Woshington, April), whose writer assures us that the deliver-was all the properties of the city from fill in and disease has been due to the visc, conscientions, persistent measures which for three years the Cnited States officers have been enforcing throughout Hawana, despite the opposition and dislike of the Cubans. The article is accommanced by photographs that show strikingly the contrast

accompanies to proograms that show straingly the contrast

THE NAME SECTION OF THE COUNTY PAIRS A FEW MONTHS LATER.

Country of The National Geographical Magazine (Washington).

beween Havana of the past and Havana of to-day. In January, top, the engineering work of Havana was given over to the charge of Major William Black, of the engineer corps, and to him are due in large measure the splendid results that have been achieved. By the end of the second year of American occupation every house in the city had been cleaned from top to bottom at least once under supervission of American officers. The cleaning squad washed the floors with electrozone (made by the electrolysis of sea-water) and the walls with a solution of bichloride of mercary. As many as 6,600 houses were cleaned in this way in a single month. The writer in *The National Geographical* 

"It may at first sight seem to have been an arbitrary course of

A SECTION OF THE COLON PARK, HAVANA, WHEN THE UNITED STATES OFFICERS ASSUMED CONTROL OF THE CITY.

Courtesy of The National Geographical Magazine (Washington),

proceedings, to enter a man's house thus and wash it while he had his family looked on, but the health and safety of the whole people demanded that a complete cleansing of the city be made. It be sights that met the cleaning squad may be imagined but described. Accumulations of years and decades of fifth were beaped in cellars and courts and closets.

"The cleaning of the houses, however, was not a circumstance to the work of opening and cleaning the sowers. These had not been tonebed since they were built, long ago. Years of refuse

had clocked many of them, so that the system had become a continual source of danger to the city. Without hesitation, however, they were attacked by the energetic squads and every foot of sewer thoroughly cleansed and reparied. So scientifically was the work done that, the the men were working deep down in the ground all day long, not a single man of the squads was taken sock.

"The former condition of Colon Park is shown in the picture. The park had run to weeds and coarse grass. It was not only unattractive because of its general untidiness, but quite tunsder for women and children. At night-time it was haunted by theires and things. To pass by prefer dark was to risk being held by and robbed of one's purso or even of one's clother.

"Today the park is one of the pleasure-sports of llavina. Children and nurse-girls throught walks in the daytime. In the evening it is a paper lar promende for the people. The walks love been cleaned, the grass and trees trimmed, new trees and shrush planted, been the saw been placed under the trees, and at night-time electric lamps keep the park bright and safe."

One of the most striking changes effected in the city has been in the proper paving of streets and roads. Referring to one such transformation, the writer says:

"The holes and stones have disappeared and in their stead is a hard, smooth, well-drained way. One hundred and twelve miles of streets in Hayana and its suburbs have undergone this transformation. The width of the streets ranges from 4.4 meters

[14% feet] to 13 meters [42% feet].

"The engineers had a problem on their hands to remake such narrow thoroughfares without blocking the traffic, but they solved the problem, and the work progressed rapidly without interruption to the stream of curts and vehicles. During the repairing of one street, which was only 4.4 meters [14.5] feel] wide, between the hours of 6 a.M. and 6 r.M. Major Black connect 2,37s vehicles passing one point; during the busiest part of the day 324 passed in a single hour. On another street, 6 meters wide, 2,50 vehicles passing joint in one working-day.

"The streets were washed as thoroughly as the houses, 33,000 gallons of electrozone often being used in one day for this purpose. . . . Two strengtlis were used: one, of a very strong quality, for a disinfectant, and the other, of a weak quality, for a desolorizer.

"The magnificent sea-wall and promenade shown in [another] picture was built under Major Black's personal direction. The promenade is placed at the end of the Prado, the wille avenue

THE SEA-WALL BUILT AT THE END OF THE PRADO PROMENAGE BY MAJOR BLACK.

Courtesy of 74c National Geographical Magazine (Washington).

which is a favorite drive of the inhabitants. Formerly the beach was the dumping-ground of everything offensive to the nose and eye. . . . When the plan of building this wall was announced a great outry arvae about American extravagance, and the Government was charged with scheming to squander a quarter of a million dollars of the people's money.

"As a matter of fact, the wall cost about \$10,000. Its cheapness has been a wonder to the citizens of the town, who are accustomed to generations of officials careless of the course of public funds.

"The Cubans have not liked the process which has made them cleaner and benditier. If they could have voted on it, probably they would have vetoed to n man the house- and street-cleaning proposition. What was good enough for them fathers and grand-fathers was quite good enough for them. But now that the pasts have been made enjoyable and sea promendes built where they can loaf at ease and in safety, they begin to take pride in the improvements to their causite.

"The reputation of the city of Huvann is rapidly changing for the better. The beautiful surroundings within auture has given it and the mildness of its climate in winter make the city a paradides to northerners during the harsh season of the year. There are many who believe that Palm Reach and the winter resorts of Florida are many times cellipsel by the charms of the Cuban capital, and that in the near future it will rightly become the most popular of American winter resorts."

A RYMARKABLE collection of birds' eggs has just come into the possession of the British Museum, according to I.a Nature (March 19). This collection, which was willed to the museum by the naturalist Philip Crowing, contains 15,200 specimens, some of which are very rare, notably the eggs of the great penguin and of the Labrador duck, both now extinct species.

# THE GERMAN SYSTEM OF WIRELESS TELEGRAPHY.

PRESS despatches inform us that the German Government has practically given a monopoly of wireless telegraphy in that country to the Slaby-Arco system, and has warned Marconi "off the premises." This is the system devised by Herr Slaby, president of the Charlotheury Technical Institute, and by Count Arco. It has already done practical service in China, has been adopted in the Imperial may, and is commercially fathered by the "Alignenical Elektrichtits Gesellschaft" [General Electric Company] which has been [experimenting extensively with it of late. We translate below part of a descriptive article on this system published in La Nature (Laris, March 8). Says the writer.

"The German system differs from the Anglo-Italian system in the connections of the antennae or aerial conductors. In the

Marconi system, at the transmitting-station, the two points between which the spark passes are between the earth-connection and the insulated antenna: the same is true of the receiving station where the coherer is between the earth-connection and the receiving autenna-also insulated. There is then, in the system by which the London 'Wireless Telegraph Company' asserts that it has ex-changed signals between Cornwall and Newfoundland, . . . an open circuit between the top of the antenna and the earth. On the other hand, in the Slaby-Arco system the circuit is closed through the earth, since the tops of the transmitting and receiving antennæ are both in connection with the ground. Besides this, the Slaby-Arco antenna, instead of being a single cable or a zinc cylinder, as with Marconi, is made of a kind of tangle of metallie threads."

Marconi, it appears, experimented with the Salva-Arro system in 1901 and reported on it unfavorably; but the writer believes that the conditions of the experiments were not such as to conduce to the proper working of the instruments. He specifies several instances in detail. Professor Fessenden, of our own weather bureau, after experiments with both systems, however, finds that

Marconi's gives the better results. Slaby ealls his method "spirik-telegraphy" (Finken-Telegraphie), altho, as the writer noices, other experimenters him eshown that trusmission may take place to great distances without using sparks, by the employment of alternating or intermittent currents. The following description of the Slaby-Arca opparatus is given.

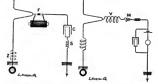

"The transmitter [Fig. 1] consists of a wire attached to a flagsist of root the must of a yease, which is connected to earth. An elbow in this wire is brought in at a window and connected to an induction-coil E, the other pole of whose secondary coil is connected to earth through a condenser C. If it is desired to earth through a condenser C. If it is desired to telegraph with a different wave-dength it is only necessary to include an additional coil Z in the earth-connection. This corresponds to a certain equivalent length of wire, by which the whole is lengthened by a quarter of a wave-length: and a whole series of these coils may be thus used. In each case, however, it is necessary to 'tune' the oscillation produced in the circuit closed by the earth-connection to the oscillation in the wire in order to get the greatest effect. To this end a regulable self-induction S is inserted.

"A similar wire serves as receiver (Fig. 2) and to it, ... is also connected an extension wire. The pressure is at 18 maximum at the end of this latter, and is reinforced by a coil. If which increases the intensity and is connected to the coherer. ... The [German] General Electric Company guarantees with this arrangement the required agreement of wave-length within certain limits and a clear reading of signals to distances of too kilometers [cor miles] at see, with masts so meters [16] feet [high.

"The distance of transmission, according to Slahy, depends

essentially on three things—the length of the parallel antenna, the frequency of the oscillations, and the mean value of the current used. The two first can scarcely be increased . . , so that M. Slaby believes that the future of spark-telegraphy lies exclassively in the direction of the production of the high electric pressures.

"What we have accomplished in this line hitherto is very modest, compared with what has been exhibited to a few of the elect on the other side of the Atlantic, on the high Rocky Mountains

1. SLABY-ARCO, THANSMITTER. D. SLABY-ARCO, RECEIVER.

near the sources of the Colorado, by Nikola Tesla. Slaby says that be can affirm nothing as a witness, but can form an opinion only on the strength of the photographs sent him by Tesla. Here we see the American experimenter in his bone, insulated, surrounded by artificially produced spark-discharges that exceed in wonder all that the boldest Imagination could dream. Slaby concludes that the theoretical knowledge of Tesla and his great technical skill can shortly be practically utilized in spark-telegraphy."—Translation made for The Literak Delect.

#### THE MANUFACTURE OF SHODDY.

THE bill requiring goods containing shouldy to be labeled to that effect continues to meet with the opposition of the manufacturers. The Textile Record (March) says of it:

"With respect to the tagging of goods containing shoddy, we may say that the purchaser of the goods is clearly entitled to protection from fraud; but no purchaser of an eight-dollar heavy overcoat needs to be told, if he has fairly good sense, that the fabric is not made of long-staple wool. Shoddy properly used is a valuable commodity to manufacturer and wearer. The production of shoddy is an absolutely honest business. The mannfacture of goods which, because they contain cotton and shoddy, may be sold at a low price, is not only an honest business, but it is as much a benefaction to the people as the production of any serviceable article from cheap materials. The manufacturer who permits a poor man to get a comfortable and well-wearing snit of wool, shoddy and cotton clothing for about one-fourth the price of an all-wool suit, performs a service of immense value to his fellow men. It is an outrage to intimate that his business is in any way fraudulent unless be shall misrepresent the character of his goods, and this would be perfectly useless, for the dealer who hays from him is quite able to determine the nature of the stock in the fabric. . . .

"If shoddy and cotton should be ruled out by law from the fabrics in which wool is the predominant element, or which merely imitate pure woolen goods, the principal sufferer would be the poor man. The ingenuity of the manufacturer now permits him to clothe himself decently and comfortably for little money; and competition is so sharp among dealers that he usually gets just about what he pays for. That he will be any happier, any more comfortable, any richer, if he shall get au analytical statement with his suit, explaining what it is made of, seems to us unlikely. . . . The rescue from waste of the woolen material in rags is useful in precisely the sense that valuable acids and other products are rescued from sawdust or from petroleum distillation. In each case, the general wealth of the community is enlarged. The oleomargarine business, for example, is a business of great importance, and when the product is sold for exactly what it is, no one is harmed. Ou the contrary, there is much benefit to the people. Shoddy has a far worse

name than it deserves, but only among people who know little about the matter and are indifferent to the right of the manufacturers who use shoddy to fair play."

are another to tail play.

Protective Imitation in Plants.—The methods employed by plants for obtaining protection from enemies by minicking or resembling other plants which are efficiently protected are thus described in Knowledge (London, February) by Rev. Alex, S. Wilson, Mr. Wilson writes:

"Mimicry is perhaps more frequent in the seed than in any other part of the vegetable organism; it occurs, however, in other organs, and even the entire plant body may assume a deceptive appearance. A well-known example is in the white dead nettle, which so closely resembles the stinging nettle in size and in the shape and arrangement of its leaves. In systematic position the two plants are widely removed from each other, but they grow in similar situations and are easily mistaken; any one who has occasion to collect quantities of Lamium is almost sure to get his hands stung by Urtica, an experience calculated to convince one of the efficacy of protective resemblance. Among animals it is species provided with formidable weapons of defense that are most fraquently mimicked by weak, defenseless creatures. The stinging nettle is therefore a very likely model for unprotected plants to copy. A somewhat analogous case is the yellow bugle of the Riviera, which has its leaves crowded and divided into three linear lobes, some of which are again divided. In this the plant differs very greatly from its allies; it has, however, acquired a very striking resemblance to a species of Euphorbia, abundant on the Riviera. The acrid juice of the Euphorbias secures them immunity against a host of enemies. As the two plants grow together there is little room to doubt that, like the dead nettle, together there is little room to doubt that, like the dean nettle, the bugle profits by its likeness to its well-protected ueighbor. One of the pine-apple family grows on trees in tropical America, and has a resemblance to a shagey lichen so marked that it is generally mistaken for a plant of that order. The fly agaric, our most conspicuously colored fungus, according to Dr. Powright, is closely minted by a parasitic flowering plant, Balancphora voluciratin, the white stem, and volva-being all accurately represented,

#### SCIENCE BREVITIES.

This regrassing of wasted cuttle ranges in Nebraska, Wyoning, Colorado, Utah, Mostana, Jahoa, and the Diskutas is to be attempted by the railways penetrating these fixtes, according to a press report noticed in The Riggeneries, Winn. The general commons of nearly assons present demands and predent commons of past because of the restrictions upon speed in all. The demand is growing for a strong, light, and comfortable machins at modern speed for general.

Sour score, say a Good Health, has assisted the question, "How much wheat is required to make a given quantity of pit?" and claims to have established that Just one hondred and ninety pounds of wheat will make exactly cellifor, which is a first expectation, the "weep nound of criginal wheat, estem before it has been awallowed by the pit, and rolled around in the mnd for air monthan ora, in more than equal, in contrilive which to two pounds of pour and an expectation of the property of the pounds of four to one. This principle applies to cort and all other grains, as well as to wheat. Great is not timely one of the property of

#### THE RELIGIOUS WORLD.

# "PULPIT HANDICAPS" IN AMERICA: AN ENGLISH VIEW.

A N English Nonconformist minister, who recently spent a year in this country, during which he attended many services in Baptart, Congregationalist, Nethodist, Preshyterian, and Protestant Episcopal churches, has come to the conclusion that American ministers labor under severe disabilities when compared with the clergymen on the other side of the Atlantic. The first of these disabilities is the domination of "false and harmful conceptions of the functions of music in public worship." He writes (in The Indeptendent, March 20):

"Music is appropriate and helpful in a service in so far as it either is used by the members of the congregation to express their religious emotions, or is employed by some devout and skilful singer or singers to carry a message of Christian stlmulus or comfort to the hearts of the listeners. As a means of entertainment it has no place at all in the distinctively religious meetings of the church; but the strongest impression left upon me by what I have heard Sunday after Sunday has been that it is for providing musical entertainment that the average church quartet earns its salary. I admit the technical ability which distinguishes the performance in the best-equipped churches. My complaint, however, is not against exhibitions of imperfect training hat against exhibitions altogether. The concert-room and the Christian sauctuary can not be satisfactorily combined under one management. I have a theory that this prominence of musical display in the usual program of church service is one of the causes of the late attendance of so many members of American congregations. Except where the popularity of the preacher makes early arrival necessary to secure a seat, the virtue of punctuality is much less common among American worshipers than English. I am not now as surprised as I was at first to find a congregation doubled by the end of the first half-hour. Why, indeed, should people take the trouble to come any earlier? They miss little but a concert, and they go to concerts during the week. There is no thread of continuity which their late coming breaks; no spiritual influence which it dispels. For myself I am bound to confess that I am in a better mood to take profit from a good sermon if I come straight to it from the street than if my ears are filled with the operatic bravuras of a soprano who has just been singing 'Nearer, My God, to Thee' to the tune of 'Robin Adair.'

The second great difficulty with which American preachers have to contend, says this English critic, is the excessive and unwholesome warmth of American charches:

"What reason is there in heating a church to 75"—a case I observed in the early autum—when the shade temperature in the street is 57"? I stood the New York summer without flinching and went on with my literary work all the time, but the haked air of the churches tries my constitution and consequently my temper. The physical and mental irritation caused thereby has to be overcome by an exercise of will-power before I can put myself into a suitable frame either for pray and praise or for an exercise of the property of the property of the second never gave me a headache or made me feel skeepy; it has several times produced both these uncelifying effects here."

These may seem small matters, declares the English minister, but they are vital ones. He concludes:

"I am convinced that the American preacher is handicapped by these local cantoms more seriously than he himself realizes. When he stands up to begin his sermon he is not touching the highest point of an asceuding scale of spiritual emotion. His discourse must be disjointed from what has gone before; the preceding part of the service is no preparation for what is to come. The devoat mood has yet to be created, and created in overcome not only his own langour—the product of an unvolvesome atmosphere and the tellousness of listening to uninspiring music—but the languor of his hearts.

"Whether these conditions are the deliberate choice of the

churches of to-day or are simply the following of some fashion set in previous years I am not able to say, but it would be intereating to watch an experiment at reform and to see whether people would not really prefer services conducted in a Christian atmosphere, both literally and metaphorically. At any rate, there is one comfort. No one can fear for the continued vitality of religion in America who remembers that it has existed until now in spite of the section and the prima-donnar.

#### A NEW RELIGION IN JAPAN.

JAPAN is thoroughly aroused by the Impassioned discussion still occupying the reviews as to the possibility and necessity of endowing that country with a new religion. Neither Buddhism nor Shintoism nor Christianity appears to be longer to the taste of the title, and each is emulating the other in searching after a supreme doctrine. Among the most earnest and ardent seekers is Dr. Inoue Tetasijio, who, while conducting the Japanese toward the promised land of a new faith, attacks on the way all the religions and all their heads. This has stirred up the reviews against this "breaker of idols." Dr. Inoue, with characteristic impetuosity, replies, in the review Tetsngaki Zasshi (Japan), to his critics and detractors:

"My new religion is not a whitewashing of ancient doctrines. I should like to find a new substance for our life, but not a new form. The form has constantly changed throughout the ages, and all the forms are alike in value. But the substance has never varied."

Dr. Inoue expresses himself as opposed to Roman Catholicism, which he holds to be inferior to Protestantism, and regards all religious as superannuated because they are based upon exterior words and ceremonies. Christianity and Buddhism are playthings, he tells us. In fact, all religious are more or less corrupt, and his compartiots, he thinks, would only be losing their time in searching after an ideal religious doctrine, for the simple reason that there is none. The only thing to do is to create a new religion by borrowing the best from existing beliefs, and then reconciling the principles thus elaborated with modern science.

In the same review, Dr. Enryo combate the theories set forth by Tetsujiro. It would be childish, says Dr. Europ, to try to build an entire religious edifice from certain of its parts. The believing portion of lumanity is accustomed to its articles of faith. These are imperceptibly connected with the state of the soul, and it is chimerical to expect to find a man skilful enough to effect with impunity an amputation of the kind. Dr. Europ writes further as follows:

"He [Inoue Tetsujiro] says among other things that Buddhism is impracticable and bad because it contains numerous doctrines and sacred books far too voluminous. But when we open Webster's large dictionary, are not the incalculable number of English circumlocutions and words equally formidable? What would be said, however, of any one who, acting on this principle, should condemn this language as uscless or too complicated? Buddhism, it is sald, teaches pessimism and asceticism. . . . This is rather due to its commentators than to Buddhism itself. . . . The Shinn priests eat meat. . . . The Buddhist sect of the Nichiren has rejected possimism and gaily enjoys life. . . . The Mahanya, the essential doctrine of Buddiham, might be developed into a system of optimism perfectly in accord with the obligations of modern life. Was not the Christianity of the Middle Ages equally a doctrine of pessimism and of renunciation of life? See what it has become to-day!

Elsewhere, Dr. Enryo criticizes Tetsujiro and his numerous adepts for wishing to base religion upon science:

"Is that necessary? The number of people who understand there is exceedingly limited, while religious principles interest everybody. Admitting the possibility of creating a religious doctrine that should be in complete accord with science, what a sorry religion it would give us!... It would above all be

[April 12, 1902

#### He says further:

"Humanity already has a religion of this character, that of Auguste Comte. And when, after incredible efforts, I succeeded in finding his church in London, I was told that the number of these adepts has never exceeded fony or fifty persons,"

Enyro concludes that there is but one solution possible of the religious problems which yex humanity, and that is to ameliorate and reform the existing religions, but not to try to create a new one, for "it is easier to repair an old building than to build, a new one," — Translations made for The LITERANY DIGEST.

# A FRENCH VIEW OF AMERICAN RELIGIOUS LIFE.

TO the average French mind, the sects of the Protestant Church are hewildering in their number and variety. The religions liberty epioyed by its members is irreconcilable with the conception of "the church" in which is reared a people of the Roman Catholic faith. Albert Schlinz, professor of French literature in Bryn Mawr College, has made a carcful study of the church as it exists to-day in the United States, and he has presented the result of his labor in an intelligent and impartial article published in the Revue Carctionne (Paris). The writer examines the American churches in their development from Puritanism, and weighs their influence for good and evil upon States.

PROF. ALBERT SCHIST

religious denominations of the United States, he thus broaches the subject of the general spirit pervading the churches of America:

"The places of worship the most

tailed statistical re-

view of the various

"The places of worship the most commonly met with may be divided into two eategories. In one is found the plain, square frame building, barely covered by a roof, that might be mistaken for a barn or stable were it not for the large win-

dows and the inscription above the door of Bethel or Elem-Eerer, the internor corresponds to the exterior—afee beepless without backs, a table for a pulpit, bare walls, sometimes not even planed. Thuse of the second category, more or less elegant or rich as to their exterior appearance, are most comfortably, sometimes luxuriously, arranged inside. There is first a large half for worship, then a half for reunions or lectures, which may be easily transformed into a theater, one or two richly furnished drawing-rooms, libraries, billiard-rooms, and finally, in the more modera church buildings, a kitchen in which to prepare the banquets or suppers for musical, literary, dramatic, gyimmatic, or even dancing soirlex.

"Exactly corresponding is the spirit of the churches. On the one hand, the simple, naive, profound faith, sufficient to satisfy the aspirations of its happy possessor, the faith of the primitive church; on the other hand, the religion that has submitted to social exigencies, that has maintained its power by sacrificing to the spirit of the age. More and more has it yielded to this current, and it may to-day be said, without risk of contradiction. that this part of the church-which may be called the official church, the one which meets in numerous congresses, which publishes newspapers and reviews, the one, in a word, which occupies the attention of the public and the press-is a social much more than a religious institution. . . . To-day if a church change in character, it is never the one of the second kind that is transformed into that of the first, but the reverse. This is the present course of the religious movement in the United States: the church, as a social institution, is steadily gaining ground upon the church as a religious justitution. In a number of eases the state of things is alarming, and the practical efforts in favor of a reaction are somewhat rare, probably because they are felt to be useless. There are, however, no lack of prophets to anothematize the indifference of the church in religious matters. Hardly a day passes that is not signalized by the publication of some energetic, sincere, and despairing protestation. These reclamations would probably be still more numerous were it not feared to injure the church outside by indiscreet confessions. The religions duties are accomplished with an ever-increasing tendency to formalism."

After dwelling further upon the church as a factor in social life, with a graphic picture of the means employed by the church to increase the number of its members, and the social advantages resulting from the choice of a church, the writer points out that the church of to-day is the natural outgrowth of the religion of the Puritans. It is easy to understand, he continues, that the rapidity of its transformation should strike terror to the hearts of the noble and sincere Christians of America, for it has not taken more than twenty years to pass from the most rigid Puritanism. the traces of which have not indeed altogether disappeared in some districts, to excessive liberty. But the modifications in the ecclesiastical order of things are only the consequence of the modifications in the social conditions. The command of the church seems to be ; Yield, yield, rather than lose the mastery over minds. It would seem that this course of action is more closely followed in proportion as modern culture has struck deeper root in the different States of the great republic. It is evident that this culture must go on increasing more and more, especially in this enoch of railroads and newspapers. The West will in all probability follow the East, and the South the West, The writer proceeds as follows:

"It must not, however, be concluded from the foregoing that the church is a dead body in the United States. It would be unjust not to recognize a beneficial element almost everywhere. And it would be an error to think that its increasing social character has only a bad side. If that is one cause of its weakness, there also incontestably lies its strength. As regards its humanitarian activity, it can, in many cases, serve as an example to Europe. Much more than we, the different churches contribute to foreign and domestic mission work, . . . Dogmatic and religious convictions being relegated to the background, there is so much the more energy to be utilized in the field of practical life. The enterprising character of the Americans, it is unnecessary to say, adapts itself perfectly to this new spirit. . . . Mention should here be made of the influence of the church upon the morality of the nation. There is no doubt that the moral level of America is much superior to that of Europe. There is much wickedness in New York, perhaps more than in the great cities of Europe; and in Chleago, houses of corruption extend their arms to you: but, in general, dissimulation is better understood than in the old continent, and innocence is less quickly dragged into the abyss. The church has certainly much to do with this purity of customs. The strict habits of the Puritans could not disappear from one day to another, and the church was the natural guardian of this moral element. It will doubtless be said that there is not much merit in doing good if it is not done for its own sake and not because evil is reproved by the Bible and socicty. True. It is like the wheel that continues to turn after the potter has withdrawn his foot. But here again the effect subsists, and if the welfare of a nation depends upon it, formalism must be accepted. Furthermore, in proportion as the ancient precents. purely formal, lose ground before reason, others, less superficial. may in time take their places and contribute to maintain and perhaps definitely fix this solidity of customs,"

The article concludes in part as follows:

"The Protestant Church in America is passing through a period of transition. The passage to a new phase and a less equivocal character will not be made until she has resolved one way or another the problems of the relations between religion and morals. For the time being, theologians and pastors are doing their best to embroil the question; their aim, avowed or not, conscious or unconscions, is to confound religion and morals, and to present the second under the name of the first. This is easily understood, for if ever the moral tendency which prevails so strongly to-day should come to triumph definitely, it would be the end of the church as church; if its members continue to walk in the name of the principle, 'Christianity is a life and not a doctrine, the sole possible result will be the gradual disappearance of all the religious element in the parishes, . . . An indication of future reaction may be seen in that instinctive opposition that they [the Protestants | nre now making to the immolation of religion to morals. It is, therefore, not yet time to inter the church of America."- Translation made for THE LITERARY DIGEST.

#### EDWARD HOWARD CRIGGS: THE APOSTLE OF THE "NEW HUMANISM."

PROF. EDWARD H. GRIGGS recently closed a series of ten Saturday morning lectures on "Moral Leaders" in Tremont Temple, Boston. The vast auditorium was taxed to its full seating enpacity on the occasion of each address, and at the closing lecture several hundreds who desired to attend were unable to purchase tickets. Inquiries brought to light the fact that about one-fourth of the audience came from places over ten miles distant, some from as far south as Fall River and others from the Connecticut valley. This phenomenon, already paralleled in some of its features in New York and Philadelphia, is considered so remarkable that the Boston religious papers are devoting much space to Professor Griggs, his personality and his influence. Zion's Herald (Meth. Episc.), in nn editorial article. declares that the paid attendance at these lectures is unprecedented, and that Mr. Griggs has a "drawing power" as a public speaker never before seen even in Boston. "Who is the lecturer?" it asks; and continues;

"Professor Griggs is a young man about thirty-five years of age. Educated in the Middle West, he became a professor of English literature in Stanford University. After n few years of success there, especially as a lecturer, he resigned his position, going abroad for a season of study and travel with the purpose of becoming a peripatetic philosopher and lecturer. He is rather tall and spare, weighing perhaps 140 pounds. His face, of the feminine type, is beardless, and his black hair, worn ruther long, is an admirable erown for his impressive countenance, especially when he is speaking. He is not an orator in the ordi-nary acceptance of the term. His voice is soft and never loud, but possesses marvelous earrying power, so that those who were located in the most remote seats of the Temple heard every word. There is an unintended pathos and persuasive power in his voice which is always agreeable, and, on occasion, very expressive. We have often seen a large part of the great audience in tears at some tender reference. His diction is chaste, elegant, and rhythmical. He begins without note or memoranda of any kind before him, and for an hour pours himself out on his theme, not as if the subject had been written out and memorized (as it probably has been), but as if he was so full of it that he could talk endlessly about it."

The best lecture of the course, in the opinion of the same writer, was that upon Francis of Assisi, who was represented as a man "dominated by the one wholly absorbing purpose of reproducing the Christ life upon this earth," The poorest lecture, on

the other hand, was that upon Erasmus and Lather, for the reason that Professor Griggs seemed to be "lacking, in personal experience and apprehension, the requisite qualities and emotions" which would have enabled him to enter into the life of these early theologians. Of the two lectures on Carlyle and Emerson, that dealing with the English writer was "more comprehensive and satisfactory." Zion's Herald says further:

"He seems absolutely sincere in his presentation of his subiects, determined to do every man exact and discriminating justice. He does not deal in panegyric or extravagant culogy, but is loval to facts. In every instance he shows the weaknesses as

well as the strength of his moral leaders. and leaves his hearers with well - balanced views of men and move ments, and the ebb and flow of what he styles the 'New Humanism, of which he is the apostle-the evolution of the fuller life which God in nature and men at their best is ever unfolding. He is sanc. wholesome, and ofttimes very inspiring in his ideals for the family, the home and noble living and doing. Charmingly reticent in referring to himself, he is especially considerate of the

FRWARD DOW AND SPIGGS

convictions of others, seldom, if ever, uttering a harsh word against anybody, and seeking to find good, if possible, in things which seem evil.

Theologically and religiously, Professor Griggs is mainly an enigma, and no catechizing has succeeded in making him reveal his view of the person and work of Jesus Christ. On this point Zion's Herald says:

"He freely concedes that Jesus was the consummate fruitage of humanity, the best and noblest man that ever lived; but he cludes every inquiry that seeks to make him define his views of Jesus as touching his supernatural claims and mission. That Professor Griggs holds what is known as the Unitarian view of Jesus Christ rather than the evangelical is apparent to the critical hearer; and that his course of lectures has been n grent makeweight for the opinions and philosophy of that school of thinkers is equally clear. This is the missing note in his message. . . . As a student of epochal men and movements, Mr. Griggs is critical, fair, and inst; as a religious teacher, as he sometimes unintentionally, we think, assumes to be, he is inadequate, unsafe, and misleading."

Yet, in spite of what it considers to be his limitations, Zion's Herald predicts for Mr. Griggs "a brilliant and remarkable career," adding that, if heard "with open ears and with calm and unshaken trust in the great fundamentals of Christian truth," he can not fail to prove one of the most stimulating teachers before the public to-day,

#### BISHOP QUIGLEY'S ATTACK UPON SOCIALISM.

A The time of the issuance of the Pope's Encyclical last year,
it was predicted in several quarters that this message
marked the beginning of an organized erusade against Socialism
on the part of the Roman Catholic Church. That there was
some truth in this propleve; is already aparent. The active
"Christian Democracy" of Italy is an organization whose special
function is to undermine the influence of the Socialist movement,
and in this country an equally direct propaganda is being carried
on. Archbishop Corrigan's sermons against Socialism, to which
we have already referred (see The Literacy Disease, January 11),
have been followed by similar addresses from prominent prelates
in various parts of the country, and on the occasion of a recent
lecture tour of Father McGrady, the Socialist priest, in the West
Bishop Messurger, of Wisconsin, published a letter severely sco-

Copyright by Remington. Photo by Rowley

demning McGrady and warning Roman Catholies not to go and hear him. Even more emphatic is the utterance of Bishop Quigley, of Buffalo, who has been spurred to action, it is said, by the growing strength of the Social-Democratic doctrine in the German trade-unions, The bishop recently addressed a meeting of 3,000 Catholic workingmen in Buffalo on the "fallacies" of Socialism, and he has issued an open letter on the

open letter on the subject to the pricets of his diocese. From this manifesto, which is printed in full in the Buffalo Catholic Union and Times, we quote as follows:

"As a political party Social/Democracy is a recent importation from continental Europe. Here, as there, its awaved object is the creation of a new order of things totally destructive of the existing social, political, and economical conditions under which we live. The attainment of this new order of things is to be effected by political agitation in the until, but revolutionary and as the masses shall be sufficiently organized to cope with the powers of capital and class.

"Exerywhere this movement is characterized by unbelief, hostility to religion, and, above all, uncompromising and bitter hatted and denunciation of the Catholic Church. Its ofheial programs, the platforms of its party conventions, the public utterances of its leading advocates, its newspaper organs and periodicals, breathe hatted and threats against revealed religion, its docrines and inattutions.

"Social-Democracy denies the existence of God, the immortality of the sool, eternal punishment, the right of private ownership, the rightful existence of our present social organization, and the independence of the church as a society complete in itself and founded by tiod. Therefore no Catholic can become a of a Social-Democratic organization or subscribe for or in any way contribute to the support of a Social-Democratic newspaper organ."

The New Century (Rom. Cath., Washington, D. C.) regards Bishop Quigley's letter as of more than ordinary importance, and discusses the matter at some length. It reaches the conclusion that "Catholics are opposed to the present Socialist movement in so far as its leaders insist on making it trietigious, and, in so far as it is economic, they demand more convincing proofs of its claims than have yet been given." The Pittsburg Observer (Rom. Cath.) adds: "The Catholic Church will help all laborers to right their real grievances and get what is justly theirs, but they should not accept the wild theories of Socialism and then expect the church's aid to commit wrong and to destroy belief in God."

The Worker, the New York organ of the Social-Democratle party, takes up the gauntlet thrown down by Bishop Quigley in a spirited editorial bearing the title, "Shall the Church Rule the Labor Movement?" It says, in part:

"The bishop's charge is a sweeping one. We now challeuge him, as bishop or as honest man, to prove, not the whole, but one-hundredth part of what he has alleged. He can not do it, for it is not true. Our national party platform is printed in this paper; let readers search there for 'hatred, denunclation, and intreats' against the Catholic Church or any other. We have in our ranks, not only men holding to the beliefs of Protestant churches, but men belonging to the same communion with Bishop Quigley and wearing the same cloth of priesthood. In the Socialist movement we ask no man his creed. We demand only his faithful adherence to the working class in its battle with the forces of engintalism.

"Bishop Quigley, let as advise you to reconsider your action. Vour attack is an unprovoked one, for the Socialist, party makes no attack upon you or your church or your beliefs. But if you persist in the attack, let us tell you that there is no organization on earth that can fight as we can. Bismarch has measured strength with us, and failed. Russian cars and Freench dictators have tried to crush our movement, and they have failed. You will not succeed.

"There is nothing more (earful than the fires of religious prejndice and antagonism. We have sought to let them slumber till they should at last die out. Beware how you stir them up. The people of America are patient and good-natured; they endure much. But at heart—Catholie and Protestant and Jew and Athesis alike—they hold dear the principle of religious liberty and the separation of church and state. Once awake them and it will not be well for him who attacks that principle.

"The Democratic party may be afraid of yon, bishop. The Republican party may be afraid of yon. But the Socialist party is not afraid of you, Because it is right, because it stands for all that is best in American history and in the world's history, and because it knows that, the fiercer your attack, the greater forces will you rally to our side."

The Rev. Dr. A. Heiter, of Buffalo, Bishop Quigley's friend and representative, has issued a challenge to the Socialists to publicly discuss the questions at issue, and it is announced in The Worker that the debate will take place in the near future.

#### FOREIGN TOPICS.

# THE GERMAN AMBASSADOR IN OUR

THE charges implicating Herr von Holleben, German Ambassador at Washington, in certain political intrigues extending back to the last Presidential election, attract more than passing notice in the European press. The Independence Belge (Brassels) goes into the subject at length:

"Much noise has been made in the international press over a scandal purely political in its nature, and of which Baron von Holleben, German Ambassador at Washington, is the hero or the victim. This diplomatist is accused, as our readers know

Doctor von Holleben finds out the cause (a cloven tongue; of Cranborne's failure of speech.

— Aladderadatich (Berlin).

through the despatches we have published, of baving, in the Presidential election of 1900, worked for the Democratic candidate, Mr. Bryan, in the hope that Mr. Bryan, once elected, would date, Mr. Bryan, in the hope that Mr. Bryan, once elected, would grant Germany the coaling-station she wants in the Carribean with the carribean of the coaling that the state of the

This step would have avoided all talk, according to this paper, which sees in the affair English intrigue and jealousy, or, at any rate, thinks "that is possible." It concludes:

"William II. has made too many advances to Mr. Roosevelt to besitate now to scarifiee his ambassador if the latter's presence at Washington displeases the United States Government. The Emperor means to gain the friendship of the Americans, cost what it may, and he will systematically remove all obstacles in his path. We shall see by the attitude of the United States in this affair whether or not it accepts the charges made against the German Ambassador, and whether the campaign conducted against the latter has in any way affected the good impression left by Prince Henry's trip."

The subject is one which very much interests the Frankfurter Zeitung. This paper recalls an article that appeared in the Schwablische Tagwacht, the Social-Democratic organ of Würtemburg, under the "significant" title: "Behind the Scenes in German Diplomacy: A Companion Piece to the Ems Despation. This article was published August 4, 1900, and was written by E. Witte, "formerly press attaché at the German Embassy in Washington." Mr. Witte's article ran as follows:

"This bitterness [against England] attained such proportions that on April 1, 1899, Count von Bülow sent a clpher cablegram to the Ambassador which he requested be made public in the

American press. . . . Sunday cane and with it the Sunday papers, but not one of them contained Count ron Billow's despatch, not one heralded the great sensation of the threatened severance of diplonatic relations between the German empire and Great Britain. Not a sign of life came meanwhile from Mr. Hildicke (of the Associated Press). The same thing over again on Monday, until at last, late on Tuesday afternoon, I received a brief telegram from him saying that a carrying out of the arrangement was unnecessary, as Lord Salisbury had meanwhile acceded to the German demands. With this announcement in my hand, I hastened to the Ambassador, who made a very queer grimace when he read it, but when composed was pleased that the Billow companion piece to the Ems despatch had not been made public."

"Whether this presentation corresponds to the facts, we can not determine," says the Frankfurter Zeitung, adding:

"Significant as to Herr Witte's place in the German Embassy at Washington is his remark that he accepted from necessity and not from inclination the offer of Dr. yon Holleben (who before his trausfer to Washington was envoy in Stuttgart) to become officially connected with the Embassy.

The German papers manifest a suspicion of England in their comments, the Hamburger Nachrichten observing:

"It is apparent that no thoughtful man in the United States has any wish to make himself a laughing-stock by taking such hair-raising blood and thunder seriousity. The matter became serious only through the efforts of American correspondents of English papers on their return to Europe. If it was supposed that the silly business would be viewed more seriously in Berlin than in America, a great mistake was made. The attempt at a blackmail was serency left to the American criminal law. To the English press, naturally, a tale of scandal involving the tier-with sinister eyes that England has no monepoly of the friendship of the 'American cousins,' that America has rather grown suspicious of England."

English papers show a tendency to consider the incident only in connection with Prince Henry's visit. Says *The Pilot* (London):

"If the German Ambassador has really been trying to work the press, which seems incredible, the effect of the visit will be almost destroyed."—Translations made for The LITERARY DIGEST.

#### THE "FUSS" OVER MISS ROOSEVELT.

M ISS ALICE ROOSEVELT is the subject of some oil comment in European newspapers, her name being associated with the Constitution of the United States, republican institutions, the wrongs of Ireland, and the Boer war. The Daily News (London) says.

English people will sympathize deeply with Miss Roosevelt in her disappointment at the decision of the American President not to permit her to attend the coronation of King Edward and Queen Alexandra. The disappointment will be felt on both sides, for many in this country would be pleased to see and make the acquaintance of a young lady who is distinguished, not only by her position at Washington as the President's daughter, but by her own beauty and amiability. Apparently the reason why Miss Roosevelt's father will not permit her to come over is that there was a not unnatural intention to make, in common parlance, too great a fuss over her. The German Emperor and Empress were to take the opportunity of her stay in London to invite her to Berlin, and no doubt wherever she went she would be warmly welcomed and publicly fêted. This would seem to be not in accordance with the simplicity which marks American republicanism, and, if permitted, it might excite some unfriendly remark in circles in America which the President would desire to conciliate. French republicanism is of a more flamboyant type, and it is pointed out that if Mr. Roosevelt imitated the methods of the late M. Felix Faure, his chance of reelection tothe Presidency would be gone. None the less do we share the mutual disappointment that we are not to see Miss Roosevelt,

and she is not to have the pleasure of making the acquaintance of the English people and seeing the King of England crowned,"

The following particulars are supplied by The Weekly Scotsman (Edinburgh):

"The decision that she should not attend was arrived at, it is understood, for reasons of eiqueste which tended to complicate the situation. American journals now to hand, however, throw a somewhat different light on the matter. Miss Roosevelt was 'crazy to go,' says one newspaper. What young girl of eighteen wouldn't be? President Roosevelt hand obtats; but Mrs. Roosevelt finally prevailed, and it was promised that Miss Alice should England, it was amounted that Miss Aloce should be received with the honors due to the oldest daughter of an emperor. Then the trouble began,"

A remarkable editorial utterance on the subject is that of the Paris Temps. A few weeks ago it made rejected mention of Mr. Roosevelt's paternal pride in Emperor William's treatment of Miss Roosevelt as a "princess of the blood," showing his Majesty's "tact," The same paner now observes:

"Washington will forget the slight annoyances occasioned by no certain want of tact on the part of William II, his affectation of treating Miss Rossevelt as a princess of the blood and of implicating in state affairs and in official telegrams the name of this charming young person whom the Constitution of the United States does not know, and whom her father would willingly laws put less to the front,"—Translations made for THE LITERARY DOGSET,

#### JOHN DILLON'S STRONG LANGUAGE.

E NGLISH newspapers seem at a loss for words in characterizing the epithet applied to Joseph Chamberlain by John Dillon under circumstances thus set forth in a London *Times* editorial:

"Mr. Chamberlain in the course of his argument had occasion to dwell a little on the fact that some three or four thousand

JOHN DILLON.

Boers are fighting on our side, and that General Vilonel called upon the others to abandon a hopeless struggle. Mr. Dillon interjected the remark, 'But he is a "trnitor,' to which the Colonial Secretary replied that Mr. Dillon is no doubt a good judge of traitors. Of course he appealed to the Speaker, who told him that he began it, and that if he would abstain from interruption he would not be subjected to retorts. Whereupon Mr. Dillon called Mr. Chamberlnin 'a damned liar, ' and refused to withdraw the expression. . . . Mr. Dillon, too, is by way of being n moderate and constitutional Nationalist, being credited with deprecating the recent

Swift MacNeill. If this be the conduct of the moderate, what are we to expect from the more violent and irresponsible members of the Irish party?"

The Standard (London) is unreserved in its condemnation:

"Mr. Dillon's defiance of the House of Commons and disobedience to the Speaker are the culmination of a series of Nationalist demonstrations, of which they were not in reality the worst example. To give the lie direct, and in the language of the gutter, to a minister is less intolerable and provexative than to cheer the defect of a British force and the capture of one of our generals. The Irish explosion of delight which greeted the amouncement of the Tweebosch disaster will not soon pass from the memory of the House of Commons. We can not affect to regret it. It showed what manner of men these Nationalist representatives are, and what is the character of their real ends and aims."

A view which, as coming from England, has at least the merit of uncompromising originality, is thus expressed by the advanced Radical Reynolds's Newspaper (London);

"To call the Birmingham—or, rather, the Camberwell—renegade 'a d— lar', as Shr. Dillon did in the House of Commoso
on Thursday night, may have been unparlamentary, but probnolly the majority of our people will agree that it was a thoroughly necurate description of the vulgarest politician in Partiament. He accused Mr. Dillon of being an authority on 'tracablory'—he whose whole life has been a constant betrayal of his
political afflies. Chamberlain's entire career has been a lie, as
my one may ascertain for humself by reading his past speeches
and contrasting them with his present professions. Lord Salislandy valed him Jack Cade—an epithet which charged very much
satisfaction of knowing that he is the most bashed main in this
cannity, of which he is the greatest enemy, his unscrupulous
concett having brought it almost to the verge of rain."

Irish papers devoce nucle comment to the spisode. The Daily Express (Doblin) says, "the attitude of the Irish Nationalist members is intelligible enough, since it is their deliberate parpose to degrade the House of Commons." The Irish Times (Dultin) thinks too much importance should not be attached to Mr. Dillon's act in England. The Fireman's Journal (Dublin) says deems time and Hondorm Chamberlain, not Dillon. The Evening Telegraph (Dublin) says that Dillon was "guilty of a shight exaggeration" in replying to Chamberlain: "He called him a damaed liar, but the damanation is only coning. It is in sight, and as to Mr. Chamberlain being a liar, that goes without saying."

# IMMEDIATE FUTURE OF THE MONROE DOCTRINE.

POR some little time the question has been "discreetly mosted" in certain European capitals "whether the United States are well advised in extending the Monroe Doctriue to South America," according to the Vienna correspondent of the London Times, Whereupon The St. James's Gazette (London) observes:

"Whether wise or unwise, we do not imagine that Americans are likely to therate for a moment the treatment of this materia as an open question. It will require n good deal more than a visit of civility from an aminble German Prince before the United Stutes will let William II, lay hands on Brazil without scarificing the bones of a good many Pomerauian greandlers.

The comment of *The Spectator* (London) connects the subject with German world-policy;

"We have repeatedly pointed out that this policy must in the nature of things tuclude a wish for territory in South America whither the surplus population of the empire can betake itself without losing its untionality. We note, therefore, with some interest that friction has begun between the numerous German settlers in Rio Grande do Sul and the Government of Brazil. That Government, it is stated, is raising after many years a question of the settlers' titles, and compelling them to repurchase their lands, not at their original price, but at their value after their own improvements have been counted in. As this disposition is not shown toward the Italian settlers, it is possible that priestly influence is at work; but the Germans will undoubtedly appeal to Berlin, which can protect them fully if only Washington permits. Washington will not permit; but she does not even pretend to interfere in the internal quarrel, and it has just been noted in the German parliament that emigrants ought to go to Brazil rather than to North America, where they are lost. When there are enough of them nn insurrection would not contravene the Monroe Doctrine."

With reference to the claims of the German settlers in Brazil,

the  $K\delta inische\ Zeitung\$  publishes an elaborate article, thus summing up:

"The colonists may be referred to the Brazilian courts.

But the only appeal open is to the courts of thrid instance, the tribunal being in Nio Janeiro. But such a legal procedure requires not only much time but a great deal more money than the colonists can afford. No, aid and protection can be given then only by a stronger Power, ..., "If only we were Italians we should be free from such oppression," is the universal sigh of our countrymen there. Our Government has every motive to give them the same protection that the emigrants of smaller Powers receive. If our colonists, as a result of the general naturalization law of 1800 have lost the right of German citizenship, the German empire has nevertheless ample means to obtain rederes for such violation of its rights,"—Transitation made for The LATRAM DISSES.

#### JAPAN ON THE ANGLO-JAPANESE ALLIANCE.

THE Japanese press, native and non-native, comments in an almost unanimously enthusiastic chorus upon the treaty of offense and defense between Great Britain and Japan. The subject is apparently inexhnustible. Most noticeable is Japanese pride in such recognition of Japan by a great civilized Power. The Matnich (Joaku) says;

"The contracting Powers are Great Britain and Japan on paper, but there is also the unofficial American support of the alliance. It is an alliance of the three Powers which hold the balance of power in the Far East, in commerce, in navigation, and in naval and military strength. The three Powers in combination can defy the world, and we do not hesitate to assert that their alliance is sufficient to guaranty the peace of the world. The mist of uncertainty which has hung over the Far East since the China-Japan war has been dispersed by the alliance. Dreams of dismemberment, schemes of territorial aggrandizement and the other policies of some Powers have been blown away from the Asiatic continent. The alliance in truth protects the lives and the safety of one-third of the population of the world. The condition of affairs in China and Korea which has latherto been disastrous will become a paradise. All who hope for the peace of the world should hail the alliance, securing, as it does, the happiness of mankind. The alliance is one of the great suc-

THE BEAR'S PART IN THE LITTLE ANGLO-JAPANESE ANNANGEMENT.

cesses of the world. The two Powers in the East and the West have clasped hands, have cleared a great problem, and have thrown their sash of protection over China and Korca. They have succeeded where the greatness of Rome and Genghis Khan failed.

The fiji is of opinion that the peace of the Far East has been made enduring, and adds;

"We welcome the alliance as Japanese subjects; but also because it assists the progress and peace of the world. Great Britain does not often enter into such agreements, but she has now contracted one with Japan. It may be said that general political conditions led her to take this determined step, but it may also be said that she had appreciated the worth of Japan."

The paper concludes by cautioning the Japanese people that their responsibilities have been made heavier by the alliance, and they are advised to go forward maintaining their dignity and their position.

It would be possible to quote echo after echo of these views. Still there is dissent here and there, as may be seen in the following from the Niroku (Tokyo):

"The Anglo-Japanese Alliance stipulates that on a third country declaring war against one of the contracting Powers the ally is not to assist its colleague. Hence a third country which is superior in strength may be led or tempete ho cleare war against one of the contracting Powers. As a result of the alliance British interests in China will be perfectly protected and Japanese interests in China and Korea will be constantly endangered. This is the great fault of the alliance. Another fault is that the sphere of influence of Great Britan and Japan in China is not distinctly stated in the alliance."

The journal in conclusion warns the public that the alliance will lead to a new covenant between Great Britain, Japan, and Russia in after years.

The non-native Japanese press expresses various opinions, depending usually upon the national affiliation of the particular paper making the comment. The Japan Times, which occupies a place of its own in that it is under Japanese control, says:

"An alliance with one of the foremost nations of the world, if not the foremost." The very idea can not help arouning in us a feeling of the gravest responsibility, especially because the object of that great alliance is purely and also dutely posceful, and especially also as the news has been spring upon us with such startling suddenness. We do not mean to minimize the sense of unmixed satisfaction with which we hall the announcement of the alliance just concluded. We would have been untrue to ourselves if we were to feel otherwise, for the alliance constitutes a fact unique in the long annuals of the country and is concluded with a Power which has always shown itself disinclined to enter into written engagements with any foreign axion. This alli-

A pictorial presentation of a clause in the Anglo-Japanese Treaty. Chamberlain pounded by Russia (Count Lamsdorff) while Japan waves the on-looking Powers away.  $-Lit \, der \, Tag \, (Bertin).$ 

ance, furthermore, will beneeforth form a powerful factor in shaping the course of events in the extreme East and will therefore incure peace on this side of the world, while it lasts. And we desire nothing so much as peace in this quatrer, for our desire as a nation is now, as it has always been, the progress of the country on commercial and industrial lines. On the other hand the alliance marks a new epoch, a new departure, in our national policy which has hitherto been one of isolation and independent

At this point it behooves us to acknowledge our indebtedness to the Kobe Herald (Kobe), from whose columns we have "lifted" the Japanese comments here quoted. An elaborate editorial on "Japanese Opinion on the Alliance" appears in the Kobe Chronicke, a British daily, from which we quote:

"The anticipation expressed by the Premier in announcing the couclusion of the convention, that it will not raise any bad feeling among the other Powers, is echoed by the Nichi Nichi Shimbun. The peculiarity of this alliance, that it is not a secret one, is sufficient, our contemporary thinks, to disarm opposition, while the fact that its object is for the maintenance of peace in the Orient should delight all the other Powers. A reference is also made by the Nichi-Nichi to the new policy inaugurated by Great Britain in forming the alliance. It is perhaps inevitable that the Japanese press should compare the Anglo-German agreement, signed the year before last, with the present convention. As the Nippon points out, however, the Anglo-German agreement was merely a temporary arrangement, and was in no respect a defensive alliance such as the Anglo-Japanese convention formulates. . . . With the exception of the Niroku, the papers receive the convention with lively expressions of satisfaction. Probably political reasons account for the silence on this subject of the papers associated with the Constitutional Association, such as the Chuo and the fimmin."

The delight of the Japanese native press generally is not entirely sympathized with by the Kobe Herald, which remarks:

"It will be noted that the language of some of the Japanese newspapers is quite extravagantly enthusisatic. In their exuberance some of them are in danger of magnifying the scope of the new alliance. Their jubilation is understandable, but it is well if other of the influential Japanese papers take more moderate views. The Far East stutation is not yet clear of the wood, although time and the properties of the properties of the wood with the way."

#### SUPPRESSING STUDENTS IN RUSSIA.

STUDENT uprisings in Moscow and St. Petersburg. Poltava and Kieff, their chronic suppression by the Russian authorities, and the grave portents in all these things are agitating the European pressoutside the Caar's dominions. *The Times* (London) prefaces its long editorial on the subject thus:

"There is no country in the world with any pretence to civilitation where the authorities exercise a censorship over the press comparable to that which is exercised in Russia. The suppression, not merely of opinions, but of statements of fact distance to the Government, is regarded in the official world as amongst the chief bulwarks of the autocracy. Education, and the national and wholesome aspirations which education brings, are necessarily spreading year by year amongst the subjects of the Captubut the cherished tradition that discussion is dangerous to the state still directs the action of those responsible for the domestic peace of the empire. They have applied it with rather more than the usual severity since the beginning of the present year."

The outbreaks of last month in St. Petersburg are thus characterized:

"Such importance as the disturbance at St. Petersburg has consists in the facts that it is not an isolated disturbance and that it is not limited to the intellectual proletariat only. Outbreaks organized in the same way, but attended by much more formidable riots, have taken place at Moscow, Kieff, Kharkoff, and Odessa within the last few months, and all of these outbreaks have been marked by a common feature. In all of them the workmen have joined the students. It is this cooperation of the proletariat of labor with the proletariat of the universities which is the most remarkable and not the least disquieting symptom in this movement. It is a new symptom, and, as it seems to be due to permanent changes in Russian society which are themselves in progress, it does not appear likely to diminish. Prominent amongst those changes is the extension of elementary education and the growth of a class of factor operatives."

Those who participate in these movements no longer desire to conceal their true nature, announces the Social-Democratic Vorwarts (Berlin):

"They proclaim openly their forcible resistance of the Government's brutal Cossack proceedings, which they will no longer endure empty-handed. The Russian intellectual proletariat and the Russian tollers see no other solution than that of arms. . . . The Government has uncommonly advanced the revolutionary cause during the past three years. By slow degrees the Government's imbecility is being made as plain as day. It has scarcely beads. here they are the control of the process of the control of the control beads.

Conservative German papers ridicule this view of the situation. The *Hamburger Nachrichten* says any idea of revolution is abourd:

"We believe no true Russian will hear of any abolition of the Cars' a shoulism. He feels satisfied with the prevailing offer of things. Any attempt on the part of Nihilist students or of revolutionists of foreign birth or training to bestow the blession of parliamentary government upon Russia would be resisted by the Russian people."

The still more conseravtive Kreiz Zeitung (Berlin) draws a vivid picture of the dire consequences of any change in the Czar's absolutism:

"Great as are the evils of the present system, evils a hundredfold worse would follow if the parliamentary system made its entry into Russia. Jewish and Russian 'intelligence' in combination would call down chaos in the shortest possible time and hopelessly ruin the empire. No one who has even a half knowledge of Russian conditions can doubt this for a moment. Here if anywhere applies the proverb: They will be as they are or they will not be at all."

The Russian press is undergoing a system of suppression or penalizing in connection with the disturbances. The Viedomesti (Moscow), a semi-official paper, has been "summarily dealt with" for reporting a student demonstration.—Translations made for THE LITERALY DIGEST.

#### POINTS OF VIEW.

MAKING GENAM SOLDHER EAT GRASS.—Desusciation of German miltary methods is suited by Friendrich Geleriab because trialing ufficers compel recruits to go down on their hands and knees and eat grass like cuttle. This practice is based on their hands and knees and eat grass like cuttle. This practice is based on the property of the committed values. ### NOTABLE BOOKS OF THE DAY.

#### A DILUTED DOLLY DIALOG.

NAUGHTY NAN. By John Lather Long. t'loth, 5% x 8 Inches, 4t8 pp. Price, \$1.50. The Century Company, New York.

THIS book is one long conversation, or rather series of conversations, between its various characters. The conversations are built after the manner of the Dolly Dialogs. In fact, had one of these talks between Dolly and Mr. Carer been dragged out to book length, and the wit that was condensed into a few pages scattered through a book, it would not be unlike "Nanther Nan."

The characters in the book are few—the hero, his aunt. Naughty Nan, the bank president. Nan's Poor Things, as she named her raft of admirers, and the various people in

Little Italy, where Nan escapes occasionally for a breath of fresh garlie, The book starts gaily enough. aunt cails on the hero to " save " Nan, who is flirting outrageously with the Poor Things. The hero, who tells the story in the first person, is deemed a very staid and safe person with whom Nan could not possibly fall in love. That Mr. Long's story might not be without a plot, Nan was in infancy engaged to an English divine. Cawdor by name. Of course Nan and the hero had been in love a long time and only Cawdor had kept them apart. This situation Nan left in charge of her cousin, the hero, and, engaged to another man, gives an opportunity for any amount of Dolly

IOUN LUTBER LONG.

Dialoging. So for chapter after chapter the hero and Nan talk at cross purposes, and firt at cross purposes. Nan, tired of so much talk, no doubt, resolves to act. Cawdor has become for her an Impossibility, so Instead of throwing him over and bringing Mr. Long's book to an untimely end by so simple a proceeding, she resolves to clope with an Italian count, but clope in such a way that the hero may follow her and again save her. Cawdor would, of course, want no more of her after such an escapade, and she could marry her cousin in peace. Up to this time the book is gay and harmless enough. But Mr. Long inconsistently changes his key, and causes a railway accident in which the hero is severely injured. Nan, of course, visits him regularly in the hospital, and when the bandages are taken from his face he fancies himself repulsive to her. He goes away and wanders through Europe for two years, never seeing his face because of a promise he has made Nan not to look at himself in the glass. Of course it all ends well, except so far as the art of the story is concerped. The book, which might have been a merry extravaganza, ends as a farce with the laugh on the author. The book is artificial from beginning to end, but the artificiality is dainty and inoffensive, and to intrude railway accidents, scarred faces, and heart-breaks into such a

#### A STUDY IN SOULS.

setting was to sacrifice whatever merit the book has.

Wisions. By Miles Amber. Cloth, 5½ × fi inches, 346 pp. Price, \$1.50. Charles Scribner's Sons, New York.

THERE is a new color in this book, but it is partly due to the author's technic and partly to he impressonal attitude of "Miles Amber" toward her psychological spinning. One is Impressed by it somewhat one as the suggestion of "reserve force" in an actor atmoss the spectation of "reserve force" in an actor atmoss the spectation expectancy. At the very end, when the patient reader sees his hope firstrated, thousafter a the very end, when the patient reader sees his hope for the patient products of the patient products and the patient products and product a patient product and patient products and products and

"And now that you have been told of them, tell me: Did Esther and Rhoda live only because the shadowy Georgina died? Or have soults no aucestry, and is heredity of the bidy only "And tell me, too, if character be indeed predestination, will nothing be dedicted from the debit side when the stern angel sends in his ac-

County
"You have no answer for me, even you, who feel the irony of things;
who have the ultimate, the crowning sense of pity; yon, to whom has
been vouchsafed the rare, the supreme revelation of vastness.
"And I, too, have accepted the silence, and I wait."

After which specimen of the author's subjective mood, and the style it precipitates, one may be grateful for the gray, negative atmosphere that enshrouds the narration. There is no lesson taught by "Wistons," and the character-drawing is a labored rather than spontaneous exposition of bizarre creatures. The "story" interest is almost null, and

even the tragedy of it is brought out with the impassiveness of a master surgeon, but without his ment.

Solitonia, and a second and a simplicity whose masters are based focused in the second and a simplicity whose masters are based focused, the first in the family), falls in lave with a lusciously beautiful gypty and marries her. A more discordant note could hardly have been sounded in the Dorie rhythmof Wistons. She bears him two girls, bether and Rhous. The child-life of this pair is interesting, with the tang of their Komany blood and the education and guidance they received from Berty Hurst, a distant connection adopted by deerge's gypty mother, folls around in the background, like a last rish setter, alt through the story, an inconvincing "statio defect."

A young man. Robin Valdwya, an 'frealy' as the other characters, walks across to 'Wistons' nor day, see Esther in the woods, and even at sight of him the girl said "Yes, yes, oh yes." The next day he asks her to marry him. He is 'ngoing to write' a novel. Usually, nothing is to be feared in the shape of a novel from those who are "going to write" one. The "going" takes up all the capacing for doing

Robin turns out selfash and firts with other women. Eather comes back to Wistons, and there, soon diere, Rhoda, who has been extraoragating in London on her own account, also appears bringing a rosy in-fant which she has acquired in the Metropolis. She has no desired in the marry the infant's father, and in a fit of jealousy, and at the coldness, when he course after ber, he stabs ber and she dies. Eather is called to London the same day by Robin's mishapi in trying to rescue a baby from a fire "because he thought Eather would like it."

This is "Wistons". It to only fair to add that it is more interesting as for forth by Milos Amber than in a brutal analysis. But as you feel a trifle "put upon" when you get to the end, and, deeplie the tragic epi chookes, realme that nothing has happened, the result is much the same. The mystery of life, its irony, its malevolent conjunctions, soals with exertific tentativeness and force cravings that are frustrated—all this exertific tentativeness and force cravings that are frustrated—all this like and the confidence of the c

#### THE STARRING OF THE HEROINE.

SPINDLE AND PLOW. By Mrs. Henry Dudeney. Cloth, 51/2 x 8 inches, 34n pp. Price, \$1.50. Dodd, Mend & Co., New York.

THERE have been recently published a number of books wherein the authors have starred the heroles. Not only was the heroine the central figure, but she was allowed off the seene for hardly a moment. All the episches and all the minor characters merely served in these various novels either to round out the drains of the together the server of the properties of the proper

MRS. H. DUDENEY.

resent four differing schools of literature, and all of them enter more or less into feminine psychology. Miss Johnston's " Audrey," the seventeenth-century would nymph, lives through her various adventures with the grace and spirit that belong to a properly brought-up heroine of the historical school. The guy and artificial talk of Mr. Long's Naughty Nan fills the pages of his book. Lady Walderhurst, of Mrs. Burnett's creation, is a very perfect example of the art of a finished story-teller. Finally Shalisha, the heroine of Mrs. Dudeney's new book, "Spindle and Piow," is the latter-day heroine

It must be confessed that Shalisha looms larger as a personality than any of the others. Mrs. Dudeney can not, of course, compare to Mrs. Burnett as an accomplished writer, for Mrs.

Burnett has all the tricks of her trule at her fingerstyps. But there are an earnestress and a depth to Mrs. Dudlenje's work that one rarely finds. "Spindle and Plion" is the sort of story where notifiting very much happens and where the heroise is so much of a personality that she is quite above being a personage. Mrs. flurnett's book is literative in the properties of the stress of the str

Mrs. Dudeney has made too many of her minor characters too per-

sistently unpleasant. She has not drawn them impartially; one feels that they had no chance, for Mrs. Dudeney bore them a grudge from the first. In this book the author has gotten away from the morbidness that characterized her previous work, and has certainly drawn a more convincing picture of a woman than that presented by any other of the recent authors who have written books around the characters of their beroines.

#### STILL ANOTHER DISCUSSION OF MORAL LAW.

The Moral Law ; or, The Theory and Practise of Duty. By Edward John Hamilton, D.D. Cloth, 44 × 212 inches, 473 pp. Price \$1.60 net. Funk & Wagnalls Company, New York.

HERE is always a place for another book of ethics. In this one before us there is considerable that is new, and a general improvement of theories that are not new. Dr. Hamilton is sufficiently independent in his methods to be sure in advance of producing his own results and of speaking from a well-considered individual standpoint. In this volume, both the vocabulary which the author very happily com-

mands and the order of treatment are on the whole original. The book seems to have issued partly from the author's critical dissatisfaction with many of the existing treatments, and accordingly he passes in review the chief theories of ethical philosophy. pointing out both their defects and the residue of usable truth in them. His own theory is inductively developed from an analysis of the ethical consciousness, after a quite exten-sive survey of the principal moral categories, such as Pleasure, the Good, etc. From the analysis and generalization of the moral judgments of mankind the attempt is made to obtain the final ethical principles to which the ascertained facts of moral conduct may be referred. Following this intention, Dr. Hamil-

LIWARD I. HAMILTON.

ton comes to the test point of his theory in his analysis of the Moral Law. The ethical obligation of man is not (as with Ur. Ladd in his recent volume) carried back directly to man's personal relation with au external Will. But Dr. Hamilton makes moral law a more concrete fact than it has commonly seemed by means of a somewhat original definition. In his view, a definitive and fundamental element in law is teleological,-that is, the end in view is a relation essential to law. Accordingly the Moral Law is the bond to seek an apprehended goal, the path to the final ethical end. This goal is the absolute Good, or the generic Right. The author would say that this is a final conception, not subject to any higher reference, in this seeming to differ from those who derive the idea of Right and Good from the personal

base This is a work that will serve to suggest the radical need of improvement in our treatment of ethical problems, and whether one agrees or not with the author's views, will stimulate the student to a closer criticism of the current treatises, while provoking interest in the problems suggested.

#### AN EXTRAVAGANT PACE.

My Lapy Paggy Goes to Town. By Francia Aymar Matthews, Cloth, 3% x 8 inches, 330 pp. The Bowen Merr. Il Company, Indianapolis.

"IIIS recklessly devised outing of Lady Pergy Burgovne is a tabasco meringue. The author having set out with the buoyant resolve that probability shall not count a rap, and feeling that "the play's the thing," leads the twin-sister of Kenaston of Kenaston a swift dance. She is a country lass, who has been bred in a hoyden way that makes her strong, expert with sword, and a good horsewoman; but she is all woman and very much in love with Sir Percy de Bohun. In a miff, she packs him off and he goes to London to drown his mortification in gaicty with the bucks of the Metropolis. Then Peggy and a maid must needs trot up there on one of woman's noblest missions-redeeming a man from his evil ways. They disguise themselves as old ladies (with the aid of veds) and in her brother's room (he is ignorant of her coming) Peggy dons a sait of his, buys a wig, and even her own twin-brother does not know her.

She is bowled over by Mr. Beau Brummell's coachman because that master-fop is taken with the knot of her Mechlin cravat. Then he takes her to his lodgings thinking she is Sir Robin McTart, and there she stays during her sojourn in London. She becomes the toast of the town, plays, fights, and is a Deur ex mor hing for Sir Percy, whom she loves even after she thinks he has given his affection to Lady Diana Weston.

In a gay road party, Ludy Peggy, still as Sir Robin, actually "does"

Captain Kidd, and is within an acc of being hanged as high as Haman for that worthy himself. But even a lady less hampered by the law of probabilities than this author would have had Sir Percy come before the "drop," which he does. The amusing part is that he hates Sir Rohm McTart, whom Peggy is so brilliantly impersonating.

The story is sprightly, and there is a thin flavor of the London of that day, the we are introduced to no celebrities except Beau Brummell, with one passing allusion to Sam Johnson. In short, if the motto for her book has been, " Leave all reason, ye who enter here," and the reader can live up to it, then may be essay it with a light mind and a good heart. For those who relish thistle-down fiction, here is something that may entertain them without a feather-weight of strain on the mind

Literature would be an easy means of livelihood were this class of fiction :n great demand. Sprightly action is all, It is a wonder that "Fiction" should be a term comprehensive enough to embrace Lady Peggy Goes to 'Town," and "Romola," or "Vanity Fair." With a pleasant sense of fitness, the author narrates in the historical present, and there is more than this point of resemblance between her style and that of the prolific lady who signed herself "The Duchess." One thing that may be said without sin about the book is that it is prettily and appropriately gotten up.

#### WHAT AMERICA OWES TO PROVIDENCE.

THE HAND OF BOD IN AMERICAN HISTORY. A STUDY OF NATIONAL POLITICS. By Robert Elbs Thompson, S.T.D. Cloth, 41, x 712 inches, 235 pp. Price. \$1.00. Thomas V. Crowell & Co., New York

EW advocates of theisin would question the proposition which this hook seems intended to develop. The infereuce, however, is largely left to the reader. History is "providential" or otherwise quite consonantly with one's original assumption, and the author's theism naturally dominates his material. It is always easier, however, to predicate Providence on the whole than to point it out in detail. The author's manner of selecting and his method of treating his history are such that the reader of this book may be left with the suspicion that he only means that whatever ii, is from the "hand of God." When progress occurs and the course of events seems to be promoted, it is from divine reasons; but we are hable to more or less skepticism when we find an equal or greater providence predicated of the evil that seems to retard progress and shatter the ideal. On this principle, what course of history can not be demonstrated as providential?

This convenient method is followed by Dr. Thompson until he reaches the era of "imperialism," when he seems less willing to trust his weight upon it. The application of his "providential" assumption to the recent expansion movements too drastically, seems to him nearly blasphemous, and he deliberately repudiates the assumption, laying this part of our history to the "pride" and velition of the American people. When, on the other hand, we reflect that no period of our history has seemed quite so clearly and divinely "providential" as the past few years to great numbers of religious thinkers, the peculiar peril of this philosophy of history begins to emerge. This apparent drawing back of the author from his main method may itself be the soundest criticism of the attempt to make a category of things providential. Perhaps the utmost that any history yields for such a conclusion is a very generalized aspect of the spiritual progress of men and nations. To interrogate the special and single event, with the hope of educing a clear article of divinity, is a task too complicated for the average philosopher. If he succeeds, he usually lands in the philosophy of the great " Essay " :

- whatever is is right."

Aside from this fundamental petitic principii of the book we have here a nearly remarkable survey of American events, the moral and providential significance of which is pointed out in a way to make our national history fascinating to every hopeful mind. One is not obliged to accept the author's assumption in order to gain inspiration from the book, and he will find much of the writing original and acute. Especially suggestive are the author's conclusions that our immigrant population is our bulwark of power and safety; that this is the most temperate of civilized nations in the matter of alcoholic liquors; and that our damage fees against China forebode a policy that we shall find uncomfortable in some future applications ot it to ourselves.

In pointing out the special vocation of this republic, the author does not conjure with the term democracy; but that commonizing of the suffrage, of education, and more and more of wealth, which he names as items of our mission, is in fact the movement of our country toward the best results of democracy.

As to the main theme implied in the title of the book, much less is done with it than seems to be required. The hand of God in history is not to be best discerned and discussed by a single comparison with the Hebrew commonwealth, but by some clear analysis and synthesis of the dominance and progress of inherently spiritual ideas and standards, in their understood relations with the progress of man-or in this case the progress of the republic. In this treatise the reader will not find this work done for him, but he may gather hints from which such a spiritual rationale of our history might be worked out.

#### The Wayside Cross.

By EDWARD L WHEELER. Across the blue of a summer sky The sturm-king urges his coursers black: His rumbling chariots roll on high.

And the lightning flashes along their track. Facing the blast and blinding rain, From a wayside cross, the Christ looks dawn, His eyes of compassion filled with pain,

His temples torn by the cruel crown. But, safely sheltered amid the storm, And twittering softly, as in a nest, Beneath an arm of the sacred form. A beyy of sparrows has flowe to rest

They have an knowledge of rite or creed, They raise no question of whence or why ; They know that here in time of need.

Are shelter and peace when the storm is high. I look, and ponder: "Were it not best, When the storms of life obscure the sky, To turn from reason's »nending quest,

But lu! a rilt in the cloud appears. A gleam of heaven's abiding blue, And like a ranture that shines through tears. A flood of glory comes sweeping through,

The bow of promise its beauty flings Above the stricken and sullen surth : Again, with flutter of eager wings, The little birds flit jnylully forth

And on as simple a faith rely?

What now, to them, is the wayside cross-When skies are clearing and earth grows car? With lives unaltered for gain or loss, They chirp and chatter upon their way.

Then to my heart there comes a prayer -Not like the birds would I come to Thee. O Lord, for shelter from strife and care. From the pain and peril of life to flee.

#### Death's Claim.

By MONTROSE I. Muses.

"Hush," whispered Deeth, "by the lingering light Of life, we'll creep into the night, You and I alone:

Leave what is done for men to judge you by. Now that you come to die. The tone

Of melody, full muffled, meits away, But men will feel thee in the echo, in the cloy Or stone.

Shaped by thy hand; will laud the pen That sang for the bearts of men : The throne

Of something higher, and the light Of life eternal, waits us in the night -You and I alone :

I claimed not that of Keata to which the world is clinging.

I claimed but his power of singing As my own."

-In the Merch-April Things and Thoughts.

#### PERSONALS.

The Engraymed King of South Africa -

Most of the newspapers, in commenting on the death of Cecil Rhodes, cell him the "uncrowned king of South Africa." He was born at Bishop Stratford, Herts, in South England, on July s. 1854. He was educated in one of the English pubhe schools and et Oriel College, Oxford. He wen sent to his brother Herbert, a planter in Natel, to regain his heelth, and when the rush to the dia mond mines of Kimberley set in, the two brothers decided to try their lack there. The New York Sun in an account of his life continues :

"The two young men shouldered picks and shovels and went into the mines to dig for diamonds along with the rest. They got what the went after, but when the first excitement wore of Cecil Rhodes concinded that he knew a better game than digging his own Jewels. He made up his mind, young as be was, that there was more money for him in South Africa in hiring men to do the digging for him.

"So he left the mines and went on the floor of the Kimberley Mining Exchange. With what money be had he began speculating in mining stocks. In the midst of the early success young Rhodes thought of the degree which Oxford owed him after he had paid Oxford two more years of study, and when he left that he was ready he went back to Oxford, took his degree of AB., after peasing the necessary examinations, and returned to South Africa

"In the mean time, one of the many mining companies which had been organized in Kimberley was the De Beere Mining Company, whose capital was £100,000. Rhodes became a stockholder in the company and not long afterward became its presi dent. At the same time ell the other companies were fighting one enother and the price of diamonds became ruinously low."

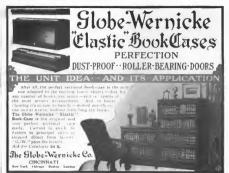

Rhodes decided to consolidate the various companies, and in 1889 succeeded, Rhodes being made the head of the consolidation ;

"Then came the organisation of the Imperial British South Africa Company, for which Rhodes obtained the charter from Parliament. In order that all opposition from the Irish benches might be shut off, Rhodes, apropos of nothing, sent his

check to Mr. Parnell for \$10,000. There was little opposition to the charter. The history of South Africa after the organization of the Chartered Company and up to the time of the Jameson raid during Christmas week of 1546 is the personal history of Cecil Rhodes.

"The Jameson raid followed. It is now known that Rhodes planned it and used all the power of the office he held to further it. That he did not aucceed was due, some have said, to the fact that Rhodes left the arrangement of important details

"Not long after the Parliamentary investigation, Rhodes's successor as Premier of Cape Colony was appointed, and he sent in his resignation as a director of the Chartered Company. No one doubts, however, that, altho only a stock-holder, Rhodea still remained the directing spirit in that great curporation."

Rhodes's fortune is given as \$72,000,000. He never married, and the bulk of his fortune outside of some personal bequests, is left for the promotion of a vast plan of education.

A Man Who Won't Write Letters.-That a man can successfully conduct a vast business for a number of years without writing or aigning a letter seems to be incredible in this age of universal letter, writing, but it is said that Mr. I. Edward. Addicks, who is president of a dozen corporations, never writes or signs a communication of any description.

Some years ago Mr. Addicks, according to the story, wrote a hasty lefter to an old friend and business associate, but, by some fortunate acci-dent, it was not mailed. The next day the injustice of the letter was so strongly impressed upon his mind that he vowed that he would haver write

another letter. He has telephones in each of his four homes, in those of all of his confidential agents and employees, and in the private offices of all of the many corporations with which he is identified. and all are paid for by him personally, and all are

supposed to be for his exclusive use. His secretary conducts all of the usual correspondence of his office .- The Saturday Evening

A Tale of Three Shoemakers.-Frank D. Shoemaker of Philadelphia, Frank D. Shoemaker of St. Louis, and Frank D. Shoemaker of Butte. Mont., were guests at the Auditorium hotel. Chicago, one day last week, and trouble began at once. First, the Butte man received a delicately perfumed note intended for the Philadelphia man Later on the St. Louis man read it and when it finally reached the Philadelphian it bore two pen ciled marks, "Opened by mistake." An hour later the Philadelphian received a bill for \$8 for cab fare. This should have gone to the Butte man, and there was excitement until it was es plained. Meanwhile, the Philadelphian's laundry had some to the room of the Butte man, whose shirts found their way to the room of the Philaphian. The St. Louis man received the baggage of all three Shoemakers. The climax came in the evening, when, despairing of getting their own letters or laundry, three men dashed down to the clerk's desk and demanded their bilts. The Philadelphia man had been at the hotel one day, and received a bill for \$18. He immediately set up a roar, to which was added the strenuous voice of the cattleman from Montana, who found, by ref erence to his bill, that he was paving just twice what he had been told was the price of his room The St. Louis man had been at the hotel 19 days. and was handed a bill for \$4. The clerk finally in troduced the three Shoemakers and straightened ont the bills .- The Kansas City Jown and

### BRIGHT'S DISEASE AND DIABETES IN LIFE INSURANCE

Thousands of men are now in danger from these diseases without knowing it. This is not an alarmist claim, but a serious and provable fact. Year after year the number of men who are terrified by learning, on applying for life insurance, that they are vietus, is enormous. They had no bint of their on, until the rigid examination revealed it.

This stealthiness is the terrible feature of nese diseases. To most men the announcethese diseases ment of their condition comes as a death tre

mestion. "Yet these diseases are curable. Our treatment has brought radical and period between the property of the property of

### FOOD DOES IT.

Restores Health More Surely Than Any Medicine.

It is a short road to trouble when the food does not supply the right material to rebuild the brain. You cannot use the brain without breaking down small particles every day, and you cannot rebuild unless the food furnishes the right kind of building material, and that is albumen and phosphate of potash. Not such as you get from the druggist but such as Nature stores

in certain kinds of food Grape-Nuts contains these particles and well defined results can be obtained from using the toothsome, delicious food.

A brain worker whose name can be given by the Postum Co., Battle Creek, Mich., writes; "Last Fall I got in a desperate condition through excessive mental work and lack of proper food. I was finally compelled to abandon all business and seek absolute quiet and rest in the country.

I had been under the care of a good physician for several months, but it seemed my food did not rebuild the brain tissue properly. I was on the verge of despair when I left for the country.

Down at the ferry I purchased an evening Journal and my attention was attracted to the headlines of a and my attention was attracted to the beadines of a Grape Nuts advertisement which read, 'food Cure Nature's Way.' I read it carefully and decided to give Grape Nuts a trial, so next morning I went in on the new food and in two weeks' time gained to pounds

and felt like a new man all over.

I candidly believe if I had known the remarkable austaining power of the food prior to my illness I would not have needed a physician nor would I have been sick at all."

### LEARN PROOFREADING.

HOME CORRESPONDENCE SCHOOL PLAN

### Would You Like to be Able to Converse in French, German or Spanish?

N these days of National growth and trade-expansion, it isn't necessary to enlarge upon the importance of the study of modern languages. The ability to converse in French, German or Spanish even fairly well is now much more than an elegant accomplishment; it is a business equipment; it not only opens social doors but enables you to solve for yourself foreign business problems.

The only question is how to learn to speak and understand these languages, quickly, easily, and with the least expense. The old way, involving years of study with little real facility at the end is obsolete. There is a better one,

Trains the

Ear, Eye, Tongue and

### The Language Phone Method

UNDREDS of professional and business men and women, teachers and students will tell you that this is the way to make the mastery of French, German or Snanish assurance in the first feel of the control of the control

INDREDS of protessional and usuates men and counter, recarry and supersity was a user any or the control of Prench o your memory and become as easy for you as your mother tongue.

#### You learn French, German or Spanish, just as a Foreigner learns English-by Hearing it Spoken

We recognize the educational, business and social value of this admirable Method and have arranged to form a Language-study Club, whose members receive the equipment (list price \$67.50) for \$40.00, payable \$5.00 for club fee and first payment and \$5.00 mo

for seven months, with one \$500 payment off for cash, making only \$1500 in all—a little more than half-price.

The complete equipment for French, German or Spanish consists of the Thone, special Listening-Device, a full series of 25 Rosenthal Master Records and the 10 Rosenthal Text-books, overing a complete course. A single equipment for any language serves for an entire family, as the records may be used hundreds of times.

A reduction is made to those owning a graphophone or phonograph (the language phone records can be used on either) and to those already having the Rosenthal text-books. Exercises prepared by members may also be sent to us for exami-

nation and correction (free of charge) by Dr. Rosenthal and his corps of trained linguists.

Send in your application on the form printed at the right and we will forward your equipment at once. You may return it prepaid and undamaged within three days and your money will be refunded, of course.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive extention at the proper time.

#### TOPICS OF THE DAY.

#### PRESIDENT ROOSEVELT AT CHARLESTON.

'HE President's references to the reunited country are commented on more widely than any other part of his speech at Charleston on April 9. It was the anniversary of Lee's surrender, but the President dld not refer to that fact, altho he did speak of "the delicate and thoughtful courtesy" that prompted the original invitation to speak on February 12, Lincoln's birthday. Aside from his references to the Civil War, and the reunion shown during the Spanish war and since, the President touched npon our duty to give reciprocity to Cuha, and npon the nation's duty regarding the trusts. "After corporations have reached a certain stage," he said, "it is indispensable to the general welfare that the nation should exercise over them, cautiously and with self-restraint, but firmly, the power of supervision and regulation." This has aroused some comment, the Philadelphia Press remarking that "if this regulation is not exercised by a Republican Administration and the Republican party, the time is not far distant when a party will be in power bent not on the regulation but on the destruction of these vast combinations."

The warm comments of the South Carolina papers testify to the heartiness of the President's welcome and the character of the impression made by his visit. "Mr. Roosevelt may well feel proud of the impression be made in Charleston, not only on Charlestonians, but on the thousands of visitors from all parts of South Carolina, North Carolina, Georgia, and other Southern States congregated within our gates, "says The News and Courier's and The Post remarks that Charleston has "absolved South Carolina in the eyes of the whole country, for as the whole State suffered, however unjustly, from the raffiantly action of an unworthy state official, so will be rehabilitated in the eyes of type for good men everywhere by Charleston's splendid entertainment." The State, of Columbia, S. C., says:

"This has been—for how many decades—the Cinderella of States, living amid the ashee of old fires, neglected by those high in national authority, almost shunned by the men who command the ear of the country. Who among those whose memories extend fifty years into the past can recall a good word spoken of South Carolina by a President of the United States? Other States have been visited, praised, and honored, but, Republican or Democrat, what President in half a century has until now testified to his pride in South Carolina, his honor for her people and their history?

"The point that touches South Carolinians to-day is that Theodore Rossevelt has broken this long course of Infilosatile, halfdisdainful neglect, has claimed kinship with us, has distinguished our men of merit by frank and beatry prisse, has claimed for the Union the right of pride in South Carolina. He has set an example to the country in not judging us by our worst but by our best. South Carolina is not longer to be blacklisted. The faith her own people have in her is stamped with the seal of highest approval.

""We do not hesitate to assert that the high recognition accorded by President Roosevelt to this State is of greater value to her than the gift of the best offices in the Union would be—because its moral effect upon the country is what is needed more than place or money."

Some of the Southern papers, however, are beginning to think that the "blue and gray speeches" are being somewhat overdone. The Nashville Banner remarks:

"It is a trite custom on the part of Northern speakers who come South to pass congratulations on the restored Union, and the President mildly transgressed in this regard. It is thirtyseven years since the Confederacy collapsed, and the entire acgulescence of the South in the arbitrament of arms for that long period, a period within which the President himself has grown from childhood to middle age, renders reiterated reference to the reunion of interests unnecessary. But the President's remarks in this respect were gracefully and delicately made. The war with Spain, he said, 'put the cap on the structure that had been building while we were almost unconscious of it, and it taught us how thoroughly, as one, we were.' The South did not need the lesson and was not surprised at the result. It would have been the same twenty years previous. With the exception of a few irreconcilables the South, after Appomattox, regarded itself as much in the Union as It had been prior to the attack on Fort Sumter. The result of the war was accepted in good faith, and Ben Hill's declaration in the Senate. 'We are in the house of our fathers,' was the feeling emertained by the great body of Southerners. Politics after the war more than fighting during the war estranged the sections, and 'it was long the policy of a large class of politicians at the North to represent the South as still rebellious. For this reason a great many people at the North were no doubt agreeably surprised when the South responded so heartily for the call for volunteers for the war with Spain, but in this section it was taken as a matter of course.

"It would be well enough in the future, when orators from the North address Southern audiences, or vice versa, to omit all remarks about 'restored good feeling,' 'a rennited country,' etc. Such expressions are musty and more than superfluous."

Hartford's Labor Union Mayor.—The election of Ignatias A Sulfirma, a labor leader of Connection, as mayor of Hartford, has brought out some comment from the press. He was the Democratic and Economic League candidate and was elected by a plurality of 571 votes. Most of the papers in commenting on his victory asy that there is no reason why Mr. Sulfilium's administration should not be a success, and the Brooklyn Times thinks that the only thing to be feared is the "abuse of power," and it adds that "capital has a bused power qibe as frequently as labor has." The Providence Journal looks forward to next year and tells ns that if Mr. Sulfivan's followers lose their next fight through lack of "cohesion," or mistakes, "they have taught the regular parties in that city what elements of strength

lie in the common people when they care to 'get together' and to put their best foot forward."

Mr. Sullivan was a clerk in a clothing-house, and a few years ago was one of the leaders in the organization of the Clerks' Union, Since then he has been a leader among workingmen. He was president of the Harford Central Labor Union, and is now serving his second term as president of the State Federation of Labor.

Connecticut now has three labor mayors. The other two are Mayor Mulvihil, Of Bridgeport, and Mayor Chartes, of Ansonia. The New Haven Register, commenting on the work of these two mayors, says that their careers: "have been of a character to reassure and not to frighten the conservative sense of the Connecticut people," and have also "shown a grasp of administrative requirements which reveal the educational faculties of free and independent citienship."

#### EXACTIONS OF THE BEFF TRUST.

THE time when the cow is said to have jumped over the moon is recalled by the recent rapid rise in beef, and the astonishment reported as occurring at that time is paralleled to-day by the alarm voiced in the comment of some of the newspapers. The price of beef at New York, according to Bradstreet's, advanced more than thirteen per cent, between lanuary I and April 1 of this year, while the price of beeves at Chicago on those two dates was unchanged. Other figures are quoted to show that American beef is sold at the same price in Liverpool as in New York, despite the transatlantic freight charges; and a number of papers reach the conclusion that beef is kept at an exorbitant figure in this country by a "beef trust." The New York Herald has devoted many pages of reading matter and pictures to an attack on the trust, Tammany Hall has formally denounced the combine in a set of resolutions and has appointed a committee of three to help suppress it, and the retail dealers in Philadelphia, New York, and elsewhere are reported to be on the point of cutting loose from the "trust" and killing their own beef. Some newspapers suggest that the Eastern farmers return to raising cattle for the market; others are exhorting their readers to punish the trust by eating less meat.

The Baltimore American, the New York World, the Minneapolis Times, and a number of other papers call upon the Government to take action against the beef ring and bring relief to the people. The New Orleans Picarune says:

"The onus of the entire affair comes back to the Republican party. It is the party of the trusts. There are laws which were enacted for the protection of the people from the rapacity of the trusts. There are laws are wholly in the keeping of the Republican officials. It rests with the party whether they will be enforced or not. It rests with the preson Republican Administration whether or not an earnest, effective movement is going to be made, or whether a norre perfunctory preference of a movement is contemplated, or whether any notice at all will be taken of the evil,

"The belief is that the Republican party is so entirely indebted to the trusts that its leaders dare not take any action against them. At any rate, the situation is becoming very serious, and while the people will endure a great deal, it is probable that there will be, some time or other, an end of patience."

At the same time, however, some other papers are pointing out causes that would make beef higher anyway, trust or no trust. The price of beeves on the hoof at Chicago has almost doubled in six years, and has increased twenty-five per cent, in one year, according to Bradstreet's, while the price of beef at New York has not advanced nearly so much. "There is no denving," says the Boston Herald, "that cattle are selling in Chicago at high prices, we believe the highest prices, with but a single exception, reached in twenty-five years, and it has been stated that the average price for cattle last month was \$1.50 above that for the last twenty-five years." The Chicago Inter Ocean, after noting the same fact, observes that in these prosperous times people are eating more meat, and that the increased demand raises the price. The high price of corn, too, has increased all meat prices. The profit, it declares, does not go to the packers so much as to the stock-farmers of the West who were hit so hard by last summer's drought. In any event, it adds, it is taking too much for granted to talk of a combine in meat, for, "wonderful as the resources of capital and capitalists are in the United States to-day, they fall far short of being able to control the real meat-producers of the country-the stock-raisers and farmers of the mighty West,'

Opportunely for this discussion, Mr. J. P. Irish, who knows the West thoroughly, points out in the April Forum that the 400,000,000 acres of government graning-land west of the hundredth meridian have been caten almost bare by the great herds of sheep and cattle that have been allowed to grace there at will

THE PRACEFUL CHIZEN: "Come back to earth!"
-The St. Paul Pioneer Press.

A BULL FIGHT THAT THE PUBLIC APPROVES. - The Philadelphia Inquirer,

during the past few decades. The decline in the supply of cattle from this schaustion of pasture had begun by itso, and has now reached alarming proportions. Australia, Texas, Colorado, Idaho, Montana, Nebraska, Utah, and Wyoming have passed through this experience and have solved the problem by leasing the lands. This brings in a large sum in revenue, the lesses has an interest in keeping the pasture productive, and the ranges are restored to their original carrying capacity. It is thought probable that the Government may adopt such a plan. But more and more of the Western land is being taken up every year for other purposes, and the Pittsburg Times remarks: "It need not be surprising if the price of meat never again for any permanent period gets down to what it was while range cattle fed the United States and the Old World. It is just as well to look some unpleasant facts in the facts.

#### "APPALLING" CORRUPTION IN ST. LOUIS.

WHAT the St. Louis Prot-Dispatch calls a "shocking, shameful, humilitating "ecord is given in the sema-tional report of the grand jury that has been investigating municipal corruption in St. Louis. The jury says that the conditions there "are almost too appalling for belief." One ex-alderman has been convicted of accepting a bribe of \$9,000, two ex-councimen have flee farther than face trial, haif a dosen are under indictment, and a considerable number of others are saved only by the statute of limitations. The St. Louis St.-aysys: "It has always been impossible to properly characterise the depravity of the House of Delegates, for the simple reason that most of our Houses of Delegates have been so wretched and debased that langages failed to express their condition properly." The St. Louis Republic declares that "the city is at the mercy of the boode gang," and adds:

"The attention of the entire country is fixed upon St. Louis at the present time. The local movement to suppress municipal corraption is of tremendous significance to all other American cities. If this movement is successful, if St. Louis manifests a willingness and an ability to expose and punish her boodlers and to permanently purify her Municipal Assembly, the city is and to permanently purify her Municipal Assembly, the city is ing benefit. If, on the other hand, a definite and covarioning victory is not scored, the city must suffer gire/covaly in repute."

"No course remains open," says the St. Louis Globe-Democrat," hat to hunt down every boodler, and that includes every one who has offered, given, or accepted bribes touching the municipal husiness of St. Louis." Some of the most remarkable paragrabs in the strand jury's report are the following:

"A far-reaching and systematic scheme of corruption has been carried on for years by members of the Municipal Assembly. These members form what are called combines for the especial purpose of holding prospective legislation until their demands in the way of money consideration are compiled with. Instead of discharging the duties of office for the public good and in accordance with their oath, they become organised gangs for plunder, ming their office to enrich themselves at the people's expense. Our investigation, overring, more or less, a period of ten years, wherein valuable privileges or franchists are granted until those interested in the passage thereof have paid the legislators the money demanded for action in the particular cases.

"The persons against whom indictements for bribe-giving and bribe-taking have been returned are but a small persentage of those whom inquiry convinces us deserve to wear the garb of convicts. We have had before us many of those who have been, and most of those who are now, members of the House of Delegates. We regret to report that we found a number of these utterly illiterate and lacking in ordinary intelligence, unable to give a better reason for favoring or opposing a measure than to desire to act with the majority. In some no trace of mentality or morality could be found; in others a low order of training appeared, united with base cunning, growling instincts, and sordid desires. Unqualitied to respond to the ordinary requirements of life, they are utterly incapable of comprehending the significance of an ordinance, and are incapacitated, both by nature and by training, to be makers of laws. The choosing of such men to be legislators makes a travesty of justice, sets a premium on incompetency, and deliberately usoloses the very source of law.

"These men, through their corrupt agent, approach the legislative representative or powerful corporations competing for valuable franchises and demand and receive of them sums of money ranging from \$100 to \$100,000 for their individual votes and influence.

"From the evidence before us, it appears that an official of the city government boasted of the fact that he had made \$25,000 a year out of his official position, which paid a legitimate salary of

but \$300 a year! Another official, according to evidence before us agreed with one interest to do an official act for \$75. ooo, and ufterward from the opposing interests accepted the sum of \$100,000 for doing the very opposite of that which he agreed to do for \$75,000, One legislator received in cash at his own residence the sum of \$50,000 for his vote on a pending This measure was retained hy him for a few days, then returned in the hope of receiving a larger sum. The measure was

"YOU DIKTY BOY!"

— The Kansas City Journal.

enacted, and the member, after innets delay, was finally compelled to accept \$5,000 in full for his were on the frauchies bein. In many other cases it was aboven that members of the Assembly who, prior to their election, were wholly without means, upon induction into office were soon in affinent circumstances and independent positions financially, and this, too, notwithstanding the fact that the salary of such an official was only \$25 per month!

"Convincing documentary evidence was unearthed proving that the sum god \$47,500 was placed in secrow in a bank in this city, to be paid to the members of the Municipal Assembly of \$81. Louis upon the passage of a what habel franchies ordinance. This ordinance failed, and a second till was introduced, on the passage of which the sam of about \$29,000 was distributed among asking of which the sam of about \$29,000 was distributed among control of the same of about \$29,000 was failed by the control of the control of the control of the control of the same of about \$20,000 was sold for \$1,20,000. The city realized nots used to the finding of indictiments against nearly all of the guilty parties.

"The evidence shows us that there are in this city men of seeming great respectability, directors in large ediporations and proing the properties of the purpose of bribing through the Assembly measures in which they were interested. When called before our board, some have added to the offense of bribery the crime of perjury, and only escaped the ignominy attaching to their infamous conduct by reason of the fact that the evidence, tho satisfying to our minds, would not be admissible in the trial courts. While isged evidence may be iscking to bring upon them the penalty for their acts, yet they are morally convicted by their connection with such debasephery. Some of these are as guilty as those against whom indictinents have been returned, the only difference being that they have been more successful in covering difference being that they have been more successful in covering

The Chicago Tribune recalls that "it was not many years ago

that Clicago was in the same box in which St. Louis is now," and declares that the voters of St. Louis can purify their city government as those of Chicago have done. The Clicago Evening Post and the New York American and Journal draw the moral that boodle franchise legislation will lead the people to favor municipal ownership of public franchises.

#### MR. POWDERLY RESIGNS "BY REQUEST."

THE resignation of Terence V. Powderly, as commissionergeneral of immigration, by request of President Roosevelt, rouses interest in the former's letter to Thomas Fitchie, commissioner of immigration at the port of New York, asking him

TABLENCE V. POWDERLY.

to use his influence in behalf of Mr. Porter (formerly the private secretary to President McKinley) in his aspiration for the governorship of Connecticut. The President has named Frank P. Sargent. of the Brotherhood of Locomotive Firemen, to be Mr. Powderly's successor. Mr. Powderly was removed "for sufficient cause and none too soon for the best interests of the bureau," says the Chicago Tribune, and

adds that "he has proved to be the kind of person whom President Roosevelt particularly dislikes—the partizan politician in

office."

In reply to attacks made upon him for the letter he wrote to

Mr. Fitchie, Mr. Powderly makes a statement in which he ex-

plains all the circumstances under which the letter was written. He says that on August 6, 1898, he had an interview with President McKinley and the President said to him: "Mr. Porter wishes to talk with you before you go out, and I hope you may find a way to help him." Mr. Powderly says ho saw Mr. Porter, who informed him that he was a candidate for governor of Connecticut, and asked him for his help, at the same time ex-

FRANK P. SARGENT.

plaining to him that a great deal depended upon the vote in Bridgeport. Mr. Powderly says he agreed to write to his friends, and among others he wrote to Mr. Fitchie. He also states that he thought it was the wish of President McKinley that he should assist Mr. Porter. Commenting on Mr. Powderly's statement, the New York Evening Post says:

"Dowderly is seeking to convict the late President McKinley of the most hemous offense in the eyes of party managers that could possibly be committed. He is trying to use a clead man as a shield for his own offense, and thus to escape the ostracism which awaits him. His wrigging will not save him. A thin idefense of himself breaks down at all points, he indis comfort in the contemplation of his own frankness as compared with the sense of properties to give out for publication a personal letter.' Only a tiger's heart wrapped in a politician's hide would seek to deprive Powderly of this valoue."

#### THE RIOTS IN BELGIUM.

"HE efforts of the radical party in Belgium to turn that country into a republic are watched with considerable interest by the American press. It appears from the despatches that a man who favors universal suffrage and a republican form of government in Belgium is called a Socialist, and the New York Mail and Express remarks that "Belgium may be the scene of the first Socialistic experiment in Europe," altho if the demands. of the reform party are granted the form of government may not be more radical than that of France or Switzerland. Says the Detroit Tribune: "There can be but one outcome to such a condition. There is no monarch on the face of the earth who does. not hold his office subject to the will of his people. The great mass of the people is bound to control sooner or later." The reigning monarch, Leopold, is said to lack the affection and even the respect of a large part of his subjects. The New York Commercial Advertiser calls him "a frivolous old man, unloved by his immediate kindred and not in the least respected by his own people."

As to the political condition of the country the Philadelphia Ledger says:

"The cause of the agitation is summed ap in the cries with which the mob greeted the King. 'Long live universal suffage!' 'Long live universal suffage!' 'Long live universal suffage!' 'Long live universal suffage!' The Socialists have been exceedingly active for years in working for universal suffage. Constant agitation, disorder, and the universal strike of 1897 resulted in the adoption of universal suffage, which, however, was hedged about with a peculiar system of cannulative or plural voting. Under the new law, first put to the test in 1894, every citizen over twonty-ties years old was given one vote, and voters over thirty, size years old who were married wers given an additional return of the property o

Previous to the adoption of this system the suffrage was closely limited to about 130,000 electors. Under the new law the electors numbered, at the first election, 1,370,000, who cast by the plural system 2, \$10,000 votes. The result did not satisfy the Liberals, who were almost wiped out for the time; the Socialists won twenty-eight seats, and rose into political importance; but, nevertheless, the Clericals won a crushing victory by electing 104 deputies of the whole 152. The representation gained under this system, it was said, was not equitably distributed according to the strength of the several parties, and the Socialists, Radicals, and Liberals demanded proportional representation as a necessary accompaniment of plural voting. The agitation on this subject has led to exciting and dangerous senes in Belgium for several years, and on June 28, 1800, when fighting in the Chamber of Deputies was quelled by the soldiery, revolution seemed to threaten the kingdom.

"A qualified system of proportional representation, unsatisfactory to the opposition, was adopted in the following year, and in the parliamentary elections of June, 1900, the Clericals won \$5 seats, the Liberals and Radienls 31, and the Socialists 34. This was a gain for the Socialists, and the Government's working

majority was reduced from 70 to 18. Voting is compulsory in Beiginm, and at this election the 1,453,732 electors cast under the plural system 2,239,621 votes. Of these votes it will be seen that 787,789, or more than one-third of the total, were 'plural' votes cast by persons who had in addition their one vote.

"This great power is enough to control elections, but the Mod. errate Liberals and the Radicals in 1995 made an agreement with the Socialists to unite in the campaign for the specific purpose of securing plain universal suffrage either before or by means of the election of this year. The situation is complicated with race and religious questions, and the rise of Socialism, with disconnection of the election of the securing plain of the securing the securin

#### WAS CECIL RHODES CRAZY?

I T is the wellnigh universal opinion of the American newspapers that Mr. Rhodes's dream of world federation, as told by Mr. Stead, shows that the judgment of the great South African millionaire was not well balanced. Mr. Rhodes believed the federation could be brought about by a union of Righand and the United States, and by a secret society of millionaires, organized along the lines of the Jesuit order, gradually absorbing the wealth of the world, to be devoted to such an object. Mr. Rhodes's scheme is related in an article written by W. T. Steaf for The Review of Reviews. To quote a paragraph:

"America, both in its possibilities of alliance and its attitude of commercial rivalry, was apparently ever present in Mr. Rhodes's mind. 'The world, with America in the forefront,' he wrote, 'is devising tariffs to boycott your manufactures. This is the supreme question. I believe that England, with fair play, should manufacture for the world, and, being a free trader, I believe that, until the world comes to its senses, you should declare war, I mean a commercial war, with those trying to boycott your manufactures. That is my program. You might finish the war by a union with America and universal peace after a hundred years.' But toward securing this millennium Mr. Rhodes believed the most powerful factor would be 'a secret society, organized like Loyola's, supported by the accumulated wealth of those whose aspiration is a desire to do something,' and who would be spared the 'hideous annoyance' daily created by the thought to which of their incompetent relations they should leave their fortunes. These wealthy people, Mr. Rhodes thought, would thus be greatly relieved and be able to turn 'their ill-gotten or inherited gains to some advantage.'

His scheme was "wild," says the Pittsburg Chronicle Tele-

graph, and the New York World-calls it a "streak of madness." Illis dream was a "nightmare," thinks the Baltimore New; it was "illisory and impossible," declares the Hartford Courant, and the Detroit Journal says that "it is doubtful if anything less sane ever came from a man supposed to be in his senses." The New York Evening Fost regards it as "almost grotesque," and the Chicago Evening Fost onsiders it "incoherent, wild, self-contradictory," and "absolutely childish." The Pittshurg Disputs of the New York Evening Fost commanies." and says: "It is to be doubted whether Editor Stead in publishing these imaginings of his friend has done the dead a service. The publication does not add to the reputation of the author, altho as a human document, showing the remarkable workings of the brain of a Colossus, they are not without their interest." Says the Baltimore Sum:

"Mr. Rhodes studied the plan of creation and found many defects in it. The Creator, from his point of view, was plainly lacking in wisdom. Mr. Rhodes modestly offered to perfect the inadequate designs of Providence. When the world was made. the Creator of the universe gave it to man. That was a fatal mistake in the opinion of the South African Colossus. It should have been given to the millionaires. The globe is very old and the mistake is one of long standing. Mr. Rhodes was quite willing, with the assistance of his fellow money-kings, to take over the universe and relieve the Creator of any further responsibility for administering it along antediluvian lines. In a letter to Mr. W. T. Stead of London published in part in The Sun yesterday Mr. Rhodes twelve years ago outlined his plan for the control of the world by millionaires instead of by Deity. The moneykings are to be organized into an international secret society. These monarchs of billions are to pool their interests and become the real owners of the universe to administer this hoary old planet according to their notions of wisdom, justice, and self-interest. That was Mr. Rhodes's most daring conception. It is enough to stagger humanity."

Says the New York American and Journal :

"Rhodes seems actually to have dreamed of a secret society of millionaires whose business it should be to correr the money of the globe and then run things. That is, Rhodes conceived that the world's greatest need was the multiplication of himself. But as that could not be, the next best thing that occurred to him was for men of his own financial class to get together and organize a governing trust—to form a board of directors and manage the political concerus of the English-speaking race on a Rhodes basis.

"The news of the formation of such a trust would affect the English-speaking race emotionally much as sheep, if endowed

RTAINED GLASS WINDOW DESIGN FOR THE WEATHER BUREAU.

- The Chicago Record-Herald.

ANDROMEDA AND PERSEUS UP TO DATE.

-The St. Paul Pioneer Press.

with human intelligence, would be affected by a report that the wolves were holding a convention for the advancement of the wool and mutton interests.

"At best Rhodes's ideal was benevolent despotism. If possible of realization, his millionaires' governing trust would be the most intolerable tyranny of which the mind can conceive the tyranny of a phitocracy.

"Cecil Rhodes was certainly no fool where money was to be made, but in the domain of world statesmanship he was very much of a fool,

"Which proves that the captain of industry who thinks that methods eminently efficacions for cornering mines can be applied to cornering minds and hearts and souls and bodies of militions of men is no wiser than was many a hardy and rum-expanded pirate captain who, as he paced the moonlit quarter-dext of his little body-laden brig, dramed of what a wonder he might have been hard fate only been kind enough to make him the commander of a zerst naw.

or a great havy.

"The world's sense of humor and not its fears will be touched by Cecil Rhodes's secret and oath-bound Society of Millionaires for the Suppression of Human Folly and the Proper Government of Mankind."

#### A BRITISH MILITARY BASE IN LOUISIANA.

"H ORSES have now become a matter of greater urgency than men," says the Pretoria correspondent of the London Times, and the same paper declares editorially that "horses have been the key of the situation all the time." These declarations are of interest in connection with the report that in the last year and a half from 150,000 to 200,000 horses and mules have been shipped from the United States to South Africa, for use by the British army. Most of these have been shipped from Port Chalmette, La, which has become, by reason of this trade, a shipping-point of considerable importance. The large number of officers there, connected with this trade, has led to the charge that a British camp, or, at the least, a military base of supplies, is being maintained within the borders of the United States. Governor Heard, of Louisiana, says in a formal complaint to the State Department:

"As the executive of the commonwealth of Louisiana, whose people have always been arisent lovers of these Boers. I can not but feel that the establishment and maintenance of a base of war supplies for the British army, upon her soil, place upon me a grave responsibility. These mules and horses shipped from Port Chalmette, it is claimed, are indispensable to the operations of the control of the

It is also claimed that the muleteers employed on the transports are virtually impressed into the British army upour reaching South Africa, but the main allegation seems to be that England is maintaining a military base of supplies within our borders. The Attorusy-General, in a reply to Governor Heard, says that the allegations and testimony are "sufficient to challenge attention," but defers his opinion, pending the result of an investigation now being made by an American army officer. The New Orleans Times-Democrat says, referring to the governor's investigation investigation:

"It is little less than infamous that by the splitting of hairs this British military camp may be permitted to continue to operate on the soil of Louisiana, every foot of which is the soil of the United States.

"Here, then, is a case which should be decided by a court of

equity as well as by a court of law; and tho we should deprecate any attempt that might be made by state authority to break up this British camp at Port Chalmette, we ardently hope—the people of Louisiana ferrently pray—that the United States Government may devise some means by which the national arm may drive from this companies. The state of the properties of the difference of the properties of the properties of the properties of the above was a possible of the properties of the properties of the properties of the untority of law, the State of Louisiana can not do what it speple are eager to accomplish. In view of this distressing condition, it becomes the duty of the nation to strike a blow for liberty."

#### Says the Springfield Republican :

"Please observe that the British are making 'continuous' nse of the port of New Orleans as a source of military supplies; hence, according to English authorities themselves, it must be classed as a military base.

"It is very important that this phase of the question should be given attention by the United States Government, since it can hardly be claimed that the privilege neutral citizens may have to sell war material to belligerents is susceptible of such extension as to permit a belligerent to organize supply depots, or military bases, upon the nentral Power's territory. It may be urged that an American powder company has a right to sell gunpowder to a belligerent, yet would Mr. Hay concede to that belligerent, as a necessary corollary, the privilege of operating powder-mills in this country? Would be concede to it the privilege of running openly a gun factory in this country? Now, Mr. Hay claims that American citizens may lawfully sell and ship to a belligerent horses and mules-which are universally recognized as contraband of war and as military supplies, rather than as simple merchandise-but how can be deduce from that the conclusion that the belligerent may establish, under his own immediate management and control, at a selected port, in the neutral territory of the United States, a horse and mule depot with a 'transport lauding ' where that belligerent's army transports constantly take on cargoes of military supplies-the establishment by its very organization, equipment, and permanence constituting a military base in every essential sense of that military phrase?

"In the Franco-Prussian war of 1850-71 Bismarck strongly protested to the British Government against the export of horses from British ports into France. He complained to the British ambassador at Berlin that the exportations were materially adding France in her warfare against Germany. Yet Bismarck had scarcely any case compared with the one the Boers now have against our Government. The French had not organized supply depots in English ports, and they did not run a regular army transport service across the Cliannel. Nor did any French general go not a tour of inspection, among his horse and mules tastions in the British isless. The French had no selected military base on British isless.

"A last word as to Major-General Sir Richard Stewart, K. C. M. G. and K. C. B. It is well that he came to the United States to include us in his tour of 'inspection.' He unconsciously throws a flood of light upon the situation."

The other side of the argnment is presented as follows by the Columbus Disbalch:

"There seems to be no disagreement among authorities on international law that neutrals may sell anything to belligerents. It would follow that, if the latter have the right to buy, they have also the right to establish a purchasing station for their own convenience. The Boers have the same right and, if they can not use it, that is their misfortune. As for the enlistments, they seem to be no violation of neutrality, if they are not made on American soil and if those who enlist are not unwilling. The Supreme Court has held that 'an American citizen may enter the land or naval service of a foreign government without compromising the neutrality of his own," It is probably not an offense against neutrality to employ American citizens as muleteers and subsequently to enlist them as soldiers, if they are willing. To force them into the army would, however, be an offense, not against neutrality, but against the dignity of this Government, and would naturally call for the strongest kind of representations from Washington,"

The San Francisco Call says similarly:

"It is no doubt true also that if the question were brought into

serious solution the disam would at once be made that England, baving annexed the South African republies, their existence has baving annexed and they have no claim to belligerent rights, and are not annexed republic to the neutral provision of neutrality retains one of the neutral provisions and principles of international law. It is upon that theory that the contract of the solution of the sol

"It is exceedingly doubtful whether the United States could some successfully dispute this contention. We have just assumed the same position as to the Filipinos. General Funston used forgery and the enemy's uniform to entral Againable, and it is given out by our War Department that he had a right to do both, because the Filipinos are merely insurgents, and we recognize in their case no uniform, and in dealing with them are not bound by the Geneva convention nor by our own articles of war. It will be seen that this ruling not only decides that we violate no neutral rights by recruting Great Britain's military strength, but it is also timely as an acquittal in advance of Lieutenant Waller for the shooting of helphes Filipino prisoners.

"None of this is pleasant and most of it is revolting to a sense of justice, but it is among the appulling incluents of war and is a warning to the weak to bear much and suffer and be patient before raising their hands against the strong, for they have no treaty rights, nor rights founded in the law of nations. As for their general rights as human beings, these are not any more respected by those who can afford to disrespect them than rights derived from the law."

#### MAKING SAMAR A "HOWLING WILDERNESS."

THE anti-imperialist papers appear to be much more stirred up over the alleged attocities in Sanar than are their expansionist contemporaries. The charges are that an expedition under command of Major Le. W. T. Waller killed eleven paeceful natives in cold blood, one of them being tied to a tree and shot in different parts of his body on three successive days, and put out of his misery on the fourth. The court martial mentioned below acquited the Majir Ital Saturday. Major Waller says he acted in the spirit of orders given him by General Jacob It. Smith, which General Smith denies, and the matter will probably be made the subject of a military investigation. The despatch from Manila which has aroused all the comment reads as follows:

"MANNA, April 8.-Major Littleton W. T. Waller of the Marine Corps, at to-day's session of the court-martial by which

he is being tried on the charge of executing natives of Samar without trial, testified in rebuttal of the evidence given yesterday by General Jacob II, Smith, who commanded the American troops in the Island of Samar, Major Waller said General Smith instructed him to kill and burn; that the more he killed and burned the better pleased he would be; that it was no times to take prisoners, and that he was to make Samar a howling wilderness.

"Major Waller asked General Smith to define the age limit for killing, and he replied:
"Everything over ten."

"The Major repeated this order to Captain Porter, saying:
"We do not make war in that way on old men, women, and

"Captain David D. Porter, Captain Hiram I. Bearss, and Lieutenaut Frank Halford, all of the Marine Corps, testified corroboratively,"

"Such orders as are asserted of this brigadier-general of the United States army," declares the Baltimore Heradi, "have never been confessed before in the annals of civilized warfare," and it considers them, in fact, "probably the most terrible charges made against an American soldier during a generation." The Baltimore New argues that "if we are a civilized people, we must show the Filipinos what civilized conduct is, not imitate them in the worst of their departures from it"; and the Buffalo Express, similarly, suggests that "so far from promoting civilization, we are ourselves adopting the methods of barbarism." The Boston Advectories remarks.

"Of coarse, Waller's flat statement will raise some trouble, but if the soldiers did not use such methods, how are the Philippines ever to be made of any use to this country? The Pilipinos are determined to have independence or detail. Congress is not willing to let the islands go, because there is still an idea that men on the inside cau make millions in the next ten or twenty years, promoting schemes under 'concessions' granted at Washington—something on the order of the lumber company in which Congressman Hull is interested. So, if the islands must be kept and the natives will not submit peaceally, what else can be done but to kill them off as soon as possible? For what else are men like Major Waller sent there?"

The New York Evening Post urges severe measures. It says:

"What we maintain is that a court-martial for General Smith should be convened instantly, and that, if found guilty of the crimes alleged, he should be shot. General Kitchener has had some of his murderous officers shot for less atrocious acts. We

SOMETHING NICE AND SOFT TO FALL BACK ON.

-The St. Paul Pioneer Press.

can not afford to be behind the British in inflicting stern justice upon our assassins who masquerade as solidiers. If Generalies Smith had betrayed a fortress to the enemy, or had broken his sword on the field of battle and feel ignominosity from the foc. as broken his offense would not have been half so black, and would have not brought not half so much disgrace on the army and the country, as this campaign of his in Samar, in which he ordered American solidiers to act like will beasts, red in tooth and claw."

The expansionist press show a tendency to wait for further information. "We shall continue to reserve judgment, whether the anti-imperialists do or not, until the evidence is all in," declares the New York Press; and the Philadelphia Press says:

"Military crimes are charged in the conduct of the campaign in Samar. The officer involved has been placed on trial. Pending this trial, which is being reported by cable without censorable, various newspapers assume on expart testimony that the charges are true, assert that such practises are general, and charge that nothing is done to suppress them.

"What has happened? For the first time, tangible evidence and a definite charge has been made of a military crime, the murder of prisoners. Without delay a court has been organized to try the alleged criminal. Could more be done? If these practises alleged were general would the trial have been ordered?

"The very newspapers which make the sharges based on the partial evidence presented in this trial are constantly assring the bonor, truthfulness, and high standard of our army officers. All believe this of them. Can not the national honor be safely left in their bands until their effort by the orderly process of military law to deal with military rime is completed?

"War is a brutalising trade. No one doubts it. War with a weak and treacherous race is the worst of all in its effects. Operations in such a war after an act of signal treachery puts officers and men under the strain of grave temptation. If any man officer is the American service has succumbed, he must be punished. Could a better proof be offered of the determination in Washington and at Manila to enforce high military standards in over causid men will wait before they ranch an hysterical snay judgment on the officers and men of our army jending an incomplete trial."

The New York Mail and Express, an expansionist paper, savs:

"It seems certain that indefensible cruelty has existed in Samar. The guilty man must be discovered, and, whatever his rank and past services, he must be made to pay a penalty commensurate in severity with his offense against American civilization and the hoor of our army."

#### CRITICISM OF A PROPOSED CABINET DEPARTMENT.

A BILL to create a Department of Commerce and Labor has passed the United States Senate. Manufactures are to be relegated to a borean of this department, which is a disappointment to many of those who hoped to see science and industry more prominently recognized. The American Machinist, in expressing it aliasatisfaction editorially, says:

"As in the creation of several of the other departments before this, the new department is made principally a dumping-ground for the surplus work of the existing departments. All but one of the bureans which are to constitute the new department are already in full operation in the older departments. From the Treasury are to be transferred the Life-Saving Service, the Lighthouse Board, Marine Hospital, Steamboat Inspection, Burean of Navigation, Bureau of Immigration, and Bureau of Statistics. The Bureau of Foreign Commerce is to be transferred from the Department of State. There are also to be added the Department of Labor, the Fish Commission, and the Census Burean. There is to be but one new bureau created: the Bureau of Mannfactures, with less than nine per cent. of the total working force of the new department. This bureau, it is understood, will be principally employed in the collection and publication of information relating to and presumably of interest to the manufacturing industries of the United States. This gives an idea of the extent to which the new department is really to be a department of manufactures.

"We have to confess that the scheme in the shape which it has assumed is more or less at disappointment to us., "We are saying nothing against the desirability of a department of commerce. ... But such a department is and must be entirely distinct in its field and scope from that of a department of manufactures. Commerce, and especially American commerce, has really more to do with agreniture than with manufactures; and, while there already exists a Department of Agriculture, it is ab-sard to put off the manufacturing interests of the country with a bureau in a corner.

"The Bureau of Mannfactures may be sufficient for the doing of what is now planned for it to do, but we had in mind much more and larger work. We would have had a department of mannfactures as distinctively an executive department, and with perhaps as much to do, and with as clear and distinct a field of its own, as either the War, Navy, or Post Office department.

"Besides what the department might and should do directly for all the branches of the doverament, there is much that it might also properly undertake to do for the manufacturing interests of the country in the line of test and experiment, and in the providing of gages and standards. This is a subject too extensive to be gone into here, but, with a revenue so great as to embarrass, here surely is a proper outlet for a portion. If a department of manufactures was really being created it would seem that it should surely have the Patent Office as a part of it, rather than the department which now controls it. From the hints above that the department within one controls it. Such as the proper of the property of th

#### LETTERS AND ART.

#### IS COEDUCATION A FAILURE?

D. R. EDMUND J. JAMES, president-elect of the Northwestern University at Evanston, Ill., in presenting his first communication to the board of trustees, has taken occasion to strike what is widely regarded as a heavy blow against coeducation. He said in part:

"There are many signs of a marked renetion in the public mind on the subject of coeducation. Friends of the movement may well view it

DR. EDMUND J. JAMES.

with some concern. The tide seems in certain ways to have ebbed. A prononneed reaction has set in. Not only has the system. ceased to make new converts, but there are indications that it is losing ground in the very territory which it had so completely won. A new period of questioning is upon us, A sort of vague prejudice has arisen in the country at large. which indicates a new attitude of the public mind toward the whole problem.

The system is at-

"The notion that women are ineasyable of doing college work, so commonly raped a generation ago, has completely disappeared. The objection that young near and women can not be trusted to observe proper relations in their social intercourse has lost its force, in view of the plain fact that the moral tone of coeducational institutions is desirately higher than that of the community at large, and is certainly not interior to that of schools for more see, also

"But, on the other hand, one hears oftener the claim that the increasing number of women tends to feminize the institutions where they are, in some cases to such an extent as to discourage the attendance of men. It is urged with increasing persis-

tence that the social distractions and dissingtions with their widening invasion of the secret purpose that should go with school life, form a serious problem, while others emphasize the fact that the broad difference in the future careers of the two sexes should find a more adequate recognition in the college currienla."

Dr. James added that the number of women in the North-western University is increasing relatively much faster than is the number of men, and that at the present rate of increase it will not be more than

ten years before the women will form half the student body—"a condition which many friends of the university would view with concern." "The fact is, "be continued, "that in our natural and praiseworthy desire to advance the education of women we have been neglecting to a certain extent that of the men. We ought not to have done less for the women, but we should have done far more for the men.

Dr. James's remarks have aronsed keen interest in the daily papers, which comment sympathetically on the views set forth by him. The Chicago Recod-Herald thinks that a "serious crisis in coeducation is impending"; and the Indianapolis News propheses a gradual reversion to the old policy of an educational system based upon the separation of the sexes. The Philadelphila Price says;

"The present apposition to coeducation does not take the form of denying to women a college education. It is simply an expression of an opinion that women are out of place at a man's college. And the strongest expressious of this opinion come from the men undergraduates themselves. These are heard from nearly every college and naiversity that has established coeducation. Not long ago the opposition to women students became so decided in Leland Stanford University in California that a rule was made limiting their number to a certain percentage of the total attendance. And in the Northwestern University, Chicago University, Cornell University, Columbia University, and Brown University the male undergraduates are manifesting their dislike of coeducation in ways that are more annoying than chivalrous. It may not be very manly for the male undergraduates of Chicago University to insist that the women undergraduates shall sit in the galleries at convocation exercises and take no part in the singing and cheering, and for the men students at Columbia University to object to the use of the campus and baths by the women students; but such things would not happen if there was not a public sentiment to authorize them."

The Boston Transcript says:

"It would hardly be just to say that occlueation, so far as it had been tried, but falled in the East, but it is nevertheless true that it has not been as popular as in the West, especially where it has been grafted on to the old method, as has been shown by the somewhat strained relations at Wesleyan University. There has not been the same necessity for it been, and a conservative spirit has rather discouraged it. We think both young men and young women, as a matter of abstract preference, would choose to be educated in separate institutions. There is more freedom for both under such an arrungement, and they fall more easily and naturally into the line of college life best suited to each class. If the same tendency is beginning to be experienced in the

States of the Middle West, it is an indication that that section also is becoming more conservative.

"We can hardly be-Heve that in the newer commonwealths fare ther west they have yet tired of the cocducational system, It meets more promptly and adequately the educational requirements of a new section, and If it is ever finally abandoned in our higher institutions of learning it will only be after wealth and population have so increased all over the country that economy and distance will cease to be vital considerations."

JOHN 8, PHILLIPS.

SAMUEL SIDNEY MCCLURE.

EDITORS OF CURRENT PERIODICALS.—V. McCLURE'S MAGAZINE.

#### "THE APOSTLE OF MEDIOCRITY."

THE greatest figures in modern literature hardly seem to be secure from attack in these days of iconoclastic criticism. We have already had occasion to note Mr. Fancis Gireson's article on "The Blunders of Matthew Arnold." In the March issue of The Nineteenth Crutury and After, Mr. Walter Frewen Lord launches a philippic against William Makepeace Thackersy, whom he duts "the apostic of medicorth;" Mr. Lord does not mean by this phrase that Thackeray was a medicore writer, for he conceled that Thackeray was "a kecn social observer" and that "his narrative style was as near perfection as possible." What he does mean is that Thackeray's novels mirror medicore people. The test he applies is, "thow far did Thackeray represent the social life of the innicenth century" and he answers the question by saying that Thackeray was the satirust, rather thau the portrayer, of the age in which he lived. Il goes out to say;

"The social life of any century is made up of men and women and institutions. In any century of English history an early question, if not the first question, must be. What was the position of the church? We can hardly do better, to begin with, than inquire how far Mr. Thackeray's presentation of the church is trustworthy. There are many clergymen in his six novels. . The church of the nineteenth century is represented by the Rev. Charles Honeyman and the Rev. Tufton Hunt. Charles Honeyman was the perfect type of the clerical humbig. He was untruthful, shifty, luxurious, and half-educated. To associate the idea of sacred functions with such a man, or with any of the other five men whose portraits Mr. Thackeray has given in full, is mere profanation. The Rev. Tufton Hunt was a criminal, a blackmailer, and a drunkard. The Rev. Bute Crawley, an under-bred, ignorant man, noisily vaunted his birth and position, drank too much, backed his foolish opinious on horseflesh and lost heavily. He could not have been anything but a barden to his family and his parish, and a discredit to his calling. The church of the nineteenth century sprang from that of the eighteenth century, which is represented by Parson Sampson, domestic chaplain to the Castlewood family. Parson Sampson was everything that a priest ought not to be. He was a gussip, a gambler (not a very honest gambler), a sycophant, not without good-nature, but wholly a worldling. . . .

"If, then, we are to imagine (say) a candidate for examination replying (some time in the twenty-second century) to the question: 'What was the status of the English Church in the nineteenth century as seen in Mr. Thackeray's works?' his answer may be not unreasonably foretold in the following words: 'The English Church in the nineteenth century was officered by incompetent and underbred men. The prelates were men destitute of taste, of gross habits, and worldly ideals (examplesthe Bishop of Ealing, the Bishop of Bullocksmithy, Fred Bayham's uncle), and the rank and file were either foolish drudges or men of second-rate capacity who entered the church with the view of advancing themselves in life (examples in plenty). The church of the nineteenth century is further represented as springing by natural development from the disorderly institutions of the eighteenth and seventeenth centuries. Charles Honeyman is the feeble descendant of the Sampsons and Tushers, who were themselves the last expression of sturdy vulgarity.

Mr. Lord continues the indictment by declaring that Thackeray in his novels belintes the Indian civil service and the diplomatic corps, abuses the aristocracy and the wealthy, and foments bitter feeling between Englishmen and Irishmen. Then there is his treatment of the arms.

"Let any student hold a level, so to speak, in his own mind of the Ralph Spurries, the Michael O'D-work, and the George Tritos and their blees, and then ask himself; 'Does this collection of boobies and fops and gluttons really represent the might British army?' Of course it does not; it merely represents what is is biderious and discreditable in the ways of the British amy.' There was much that was both; but there was more that was untiret the one nor the other. The exception massly goods is Chould be a superior of the contraction of th of excellence, even when it is his own handiwork, he must needs bespatter it with ridicule—make his ereation a goose when he marries and a perfect idiot in business."

The author's ignorance or inexperience or carelessness can not be urged in extenuation, for Thackeray is recognized by all to have been a "consummate artist, a conspicuous social figure, a distinguished man of the world." Mr. Lord sums the whole matter up hy saying:

"The man is so great and convincing, his atmosphere so captivating, that one reads and rereads him fascinated, and does
not stop to examine or criticiae. As Mr. Thackeray says, so
must it be. There are surely very few young readers who can
be proof against such an influence. Perhaps Mr. Ruskin was
thinking supposed. Schopenhauer, loo, wielded an admirable
proof style, and he taught permicious nomenes with so grave a
face and in so convincing a manner that he wrought inconceivable mischief. Mr. Thackeray did not in so namy words enjoin
middling ways of life and thought. He adopted a far more desterous and telling plun of campaign. He carried the war into
the enemy's country, pursued excellence, fastened on it, flung
vitriol in its place, and trampled it under foot.

"If, then, we find that in all great walks of life—in the clurch, in war, in commerce, and in diplomacy—In. Thackeray has nothing but abuse and success for success; if we find that he lowes to portray the ludicrous and the discreditable only, is it unfair to say that he is the apostle of mediocrity? Mediocre ways of life, mediocre thoughts, mediocre inclinations (miscalled passions), mediocre endicievements—linese, if not positively empined, as they sometimes are, are in effect all that is left to one who takes Mr. Thackeray for his guide. For the rest, never had a mean google by doughty an ampstle,"

### LARGEST CIRCULATING LIBRARY IN THE WORLD.

THE Booklovers' Library was founded in Philadelphia on March 5, 1900, and during the two years of its existence its growth has been so remarkable that its claim to recognition with largest circulating library in the world' is not extravagant.

There are now more than fifty branch libraries in as many Amerlean cities, and deliveries of books are made in almost every city and town of 1,000 population or over in the United States. The library is owned and managed by a corporation with a fully paid-up cash canital of \$1.000.one. A branch corporation has been established in Canada with a capital of \$100,con und an Ense

SEVMOLE E CLOS.

Inh curporation, with offices in London, Paris, and Berliu, is at present being organized. The member-ship is finited to a certain number of persons in each locality, and lins already been closed in New York, Philadelphia, and Boston. The library guntanties to "delivier use basks in the best bindings, always clean and pleasing to handle" (all suded copies to be withdrawn from circulation); to "deliver the very books asked for"; and o" eall regularly, weekly or nonthly, to make exchanges." The

Booklovers' Bulletin, a semi-monthly publication containing literary gossip and descriptions of new books, is sent free to members.

As might have been expected, opinions differ in regard to the efficiency of the Booklovers' Library service. "Some people are speaking of the service in terms of unstinted enthusiasm," remarks The Bookman (April), "while others are gruinbling because they did not receive the book they wanted the week before

Che Mirst Reals

last. But they are all talking about it. In rural libraries, on seashore pavillons, and the verandas of summer-resort hotels—everywhere, the idea and the service have been discussed."

Mr. Seymour Eaton, the organizer of the movement, has carried a very definite and forceful spirit into the new enterprise, and even its details are planned by him. In a recent issue of The Booklovers' Builtin he says:

"The public library is gradually taking its place with Institutions intended for special study and researchbook museums where the literature of all times is gathered and collated. It is to-day that people want, just as much in their books as in their newspapers. An old book bears precisely the same relation to a new book that nn old magazine does to a new magazine, or that an old newspaper does to to-day's six o'clock extra.

Mr. Eaton has set his face against the estab-

lishment of reading-rooms in connection with the Booklovers' Library because he believes that "the best reading-rooms in the world are the homes of the people." "Our whole system," he declares, "is based on this principle." In another place he says:

THE "TABARD INN" BOOK-CASE.

"I saw it stated somewhere that the interest on the millions spent in the United States for buildings for the loosing of books would carry a book a week to every man, woman, and child In the United States and pay for the annual depreciation in the value of the books. I haven't done the arithmetic of this and don't know. There are instances of very fine library buildings with no money left to buy book.

The following account of Mr. Eaton's personality appears in The Bookman:

"Were the Bookhover' Library to cause to exist to-interrow, it, mewert belose, would have served to place its originator. Nr. Seymour Eaton, among those fow men who succeed in placing a pet islen before the public. He has done more than this: he has Seed Ithis islens ineradicaidly in the public mind. Some years mgo he went to work on a plan for the Government to make through the post-office a great circulating library of the Congressional Library. Out of this plan grew the Bookhovers of to-day. Mr. Eaton was born about forty years ago on a farm in Canada. Despite scant advantages in his early youth, he succeeded in fitting himself for a broader life, serving the usual apprentices ship as a school-teacher. For the last fifteen years he has been

engaged in educational and newspaper work in this country, Some of his text-books have had extraordinary sales. He has contributed frequently to the magazines, acted for five years as the managing director of the Dreed Institute, and was for four years on the literary staff of the Chicago Resord. He is now librarian of the Booklovers' Library Incorporation, and is its largest stockholder. His home is in Lansdowne, a little country place just outside of Philadelphia.

The latest development of Mr. Eaton's plans is found in the "Tabard Inn" Library, which is already established in New York, Philadelphia, Boston, and Chicago. In addition to these four central offices, branch libraries will be organized in every city of the United States, and revolving book-cases made specially for the "Tabard Inn" service will be located in drug-stores, and other shops throughout the country. The book-cases will held about 100 books each, and the stock of books will be changed frequently. Exchanges may be made at any library station in the United States upon payment of five cents, the "Tubard Inn" book being the only identification necessary.

#### TOLSTOY ON READERS AND CRITICS.

By no means flattering is the extinate of the intelligence and taste of connemporary renalers formed by Count Tobstoy. He evidently disagrees with G6rky, who recently declared that it is exceedingly difficult for novellast to meet the exacting demands of the "new classes" of readers. The greater and veteran artist, on the contrary, fluids a deplorable corruption of the general taste, and has only words of censure and blame for the readers and the critics of the present day.

These words are uttered in an elaborate and striking introduction to a translated novel, entitled "Tite Peasant," just brought out in a new elition. The author of that work, Von Polens, a German, is almost unknown, and Tolstoy sees in that fact, and especially in the complete neglect of the novel named, one of the proofs of literary decadence and reaction. Count Tolstoys says:

"Within my recollection, in fifty years, there has been wrought this amazing decline of the general taste and the common sense of the public. This corruption is easily traced in every branch of our literature, . . The ignorance of our editurated circles is such that the truly great thinkers, poets, and prose-writers, whether of antiquity or of the mineteenth century, are regarded whether of antiquity or of the mineteenth century, are regarded refined demands of the present generation; we either pattonize these matters or frankly demiss them with a contemptions smile,

"In philosophy the last word is found in the immeral, crude, inflated, incoherent stuff of Nietzsche; as poetry of the highest order we have the senseless, unnatural juxtaposition of words connected only by meter and trythm. In all the theaters are produced plays whose meaning no one understands, not even the authors themselves, while inflinions of copies of so-called novels are circulated in which there is neither art nor significance of content."

Upon whom does the responsibility for this corruption and ignorance fall? Count Tolstoy is inclined to lay the blame largely at the door of the critics and of the periodical press. He is especially severe upon the latter. He refers to Matthew Armold's famous essay on criticism, and agrees with the statement that the duty of the critic is to discover excellence wherever it was or is, and to direct the attention of readers to that exacellence. Of this kind, he says, criticism is not only necessary in our day of the flow of pipurys, magazines, and netvertisements, but upon its appearance and influence depends the whole future of the intellectual development of European Society. Overproduction, continues Tolstoy, is injurious in any direction, but it is especially injurious in things which properly sever as means to an end, and not as an end in themselves. Speaking of the printing-press and the cheepinging of papers and books, he says:

"The printing-press, undoubtedly a great boon to the masses

of uneducated people, has become, in the hauds of the well-todo, the chief instrumentality for the dissemination of ignorance rather than of knowledge. Books, magazines, and, especially, newspapers are colossal commercial enterprises, which need the highest possible number of consumers. But the interests and instincts of the overwhelming majority of these consumers are always low and vulgar; hence the success of any book or publication demands that it reflect and represent these low and course tastes and instincts. And the press, indeed, does satisfy this condition of success, since the number of journalists and writers sharing and sympathizing with these instincts is much larger than the number of people having elevated aims and cultivated tustes. Besides, there is more profit in pandering to the masses, and thus the flood of printed matter grows and rises constantly, constituting by its magnitude alone, apart from the mischief of its substance, a huge obstacle to culightenment.

"If in our day a bright young man from the common people, desirons of elucinting himself, should be given access to all the extant books and papers, and left to his own efforts, it is highly probable that for ten years he would read nothing but trivial and immoral things. It would be as hard for him to run up against a good book as to find the proverbial needle in the haystack. The worst of it is that, reading had books constantly, his understanding and that would be commonly prevented, so that if he ever found a meritorious work he would have no capacity to connucled his."

Count Tolstoy plends for a conscientions, competent, houses criticism, free from party ties and commercial designs, devoted to art and truth, and determined to oppose quackery and falsehood. Such a school of criticism would have to fight and overcome the noisy clamor of the market-place and acquire authority over readers. Only in that case would society be saved from intellectual and moral corruption and chaos. —Translation mode for The Library Distars.

#### REAL CHARACTERS IN FICTION.

H OW far is it permissible for an author to make use of his friends-or his enemies-as characters in a novel? Richard Le Gallienne, who propounds this question in the New York Journal apropos of the publication of an anonymous novel, "The Imitator," in which several well-known society leaders are introduced in the "thinnest and flimsiest" of disguises, answers it half-jestingly as follows: "The whole question is, I imagine, one for the novelist and his victims rather than for the public. It is also a question of the novelist's personal taste and -personal safety." The London Paily News, discussing the subject more seriously and instancing the case of a recent successful libel action brought by a Bournemouth band-master against a lady novelist who had pictured him in false colors, goes on to recount several examples of the introduction of real characters into fiction. Dickens, as is well known, clearly portrayed Leigh Hunt and Landor in "Bleak House." Thackeray was often accused of caricaturing his friends, but would never admit the charge. Says The Daily News:

"Thuckeray's worst offense was against Andrew Arcedeckne, a schodefelow of his at Charterhouse, who was—according to Edmund Vates—the too exact original of our dear friend Harry Foker. . . . He haded his time, the Prosper le Gia, and it arrived on the night of Thackeray's first lecture on the Engangement of the Enga

two men could differ more widely. 'But from whom, then,' said a friend to George Eliot,' did you draw Casaubon,' 'Which was quite in carnest, however, she humorous solemnity, which was quite in carnest, however, she pointed to her own heart.' One wonders if she was thinking the heart of the sonnet which describes Sidney's perplexed search for a poetl-cal subject, nutil—

Foot! said my Muse, look in thy heart and write.

This leads us into a field too wide to cover—that of autobiographic fiction. Every writer has had a shot at that. Dickens was Copperfield, Thackeray was Pendennis, Fielding was Capatin Booth, Sir Charles Grandison represented the fat little printer's idea of what he could have been as a man of fashion—even Mr. Kipling has not disdained to depict himself as the 'inky schoolboy,'"

An average novelist, continues the same paper, is in a dilemma as to the reality of his characters. If they are to be lifelike, he must have a model. He must decide whether they are to be taken from his own inner consciousness or from the few other human beings whom he knows well enough to paint with success. The Netro concludes:

"Oliver Wendell Holmes was loath to write a novel- tho he overcame his shrinking-because he said that he would have to show up all his friends in it, and they might object to being 'butchered to make a Roman holiday,' There is, of course, what the schoolboy called a third alternative. The novelist may rely on 'documents,' like that eminent writer of 'penny dreadfuls' who lately confessed that when he needed a new sensation for his next chapter he merely took up a daily paper and studied the inquests and the police news. The highest modern example of this method is M. Zola, who once boasted that he had a 'document' for everything that the critics blamed as untrue to life in his amazing picture of the Second Empire. Charles Reade, who adopted a similar plan, describes it for the good of future novelists in his 'Terrible Temptation,' where the author puts his best foot foremost as the versatile and omniscient Rolfe. But it is only the rare writer who has sufficient 'fire in his belly,' like Ram Dass, to fuse all these odd fragments of metal into a perfect cast. The man of genius, whose psychology has not yet been made clear even by Dr. Lombroso and Mr. Havelock Ellis, can somehow produce a living and breathing being out of the heel-taps and fragments which Thackeray mentions. But the ordinary respectable povelist is bound to copy from life, if he wishes to produce people who are not mere wooden puppets. Hence it arises that keys are made to such works as those of Alphonse Daudet, that we discover the remarkable resemblance of Robert Elsmere to J. R. Green, and that Mr. Kipling's schooldays have been described-on the lex talionis principle-by the alleged original of McTurk. It all contributes, no doubt, to the general sum of harmless amusement, but we can hardly be surprised if the too enterprising novelist finds himself regarded with some shyness by his friends."

#### NOTES.

THE library of the late Moses Colt Tyler, of Cornell, has been offered for sale. It is especially rich in Americana, consisting largely of books gashered by Dir. Tyler as he was writing his admirable volumes on the "listory of American Revolution."

"Instory of American Literature" and "The Literaty History of the American Revolution."

DE. THOMAS DENK ENGLISH, who died in Newaits, N. J., a lew dars angro, was author, peel, dramatist, physician, laweyr, Congressman, and journal; is in the coarse of his long eareer. But he will be remembered chiefly because he wrote the popular song, "Hee Bolt," which had an immense voque at the time of its first appearance, and was revived by the publication of Du Maurier's "Trilby,"

MR. EUWEN H. PIRECE, director of the Holyone College of Music, writes to the delitor of The Lerrianav Direct, appense of an erect article on "The Vermanenee of Rag-Time Music," decising that, its his opinion, the marked rhythm; "a-wararantably proach." He continues: "Rag-Time is a pacular form of dance-drythm in which, by the use of synespation, the accept, which is usually preserved in the acceptance of the continues of the property of the property of the continues of the cont

#### SCIENCE AND INVENTION.

### WERE HEATHEN GODS DEFORMED HUMAN

### BEINGS? THAT the supposed appearance or even the very existence of the gods of nutiquity was often suggested by human

deformity or monstrosity is the theory of Professor Schatz, a German nuthority who has set forth his ideas in a recent address on "The Greek Gods and Human Moustrosities." The idea that the birth of monstrous human infants was the origin of the deformed deities of mythology is not new, according to The British Medical Journal, which reviews Dr. Schatz's address: but probably the various aspects of the subject have been considered by him with unusual care. The writer goes on to say:

"There is much to make us think that, so to say, the gods did not create men but men made the gods, in the sense that in early times the occurrence of a monstrous birth suggested to the people of these early times that their gods, or at least their demigods, might have appearances similar to these seen in the deformed products of human reproduction. When, therefore, we call the one-eyed infant the cyclops fetus, after Polyphemus, the king of all the Cyclopes, we are really in error, and ought to say that Polyphemus owed his existence in the pantheon to the birth of a human or (animal) one eyed fetus. So much seems fairly certain; but there are several speculations which spring from this generalization. . . . There is the identification of the monstrosities which gave rise to some of the demigrads which do not show obvious resemblances to any teratological products; there is the question why certain comparatively common monstrosities do not seem to have suggested any gods at all; and there is the consideration how far the national character was potent in guiding the choice of the monstrosities to be made use of in constructing the national gods. Professor Schutz touches suggestively upon all these topics from the special standpoint of Greek mythology,

According to the German professor, the Siren is to be identified with a human monstrosity having both lower extremities united: the Centaur, with a monstrosity having two pairs of legs; the Gorgon head, with a monstrosity whose head is imperfectly developed: Atlas, with a child having an enormous excrescence on the head, etc. The various types of united twins and other common deformities and monstrosities are not represented in the Pantheon, but Dr. Schatz assures us that this is because the na tional taste led to the selection of monstrosities which were "not in themselves ugly or inartistic." Says the writer in conclusion:

"It would be a most interesting line of investigation to apply this principle of selection to the mythologies of other nations, and more especially to those of the East, and to the gods worshiped by primitive peoples. The results might be of unexpected service in clearing up most points in comparative mythology and racial folklore."

#### THE SCIENTIFIC PRIMACY OF ELECTRICITY.

HE position that electricity occupies in modern science is becoming more and more commanding. Even in biology It is stepping to the front, as Dr. Loeb's striking theory shows, But in the physical sciences it is now easily at the head. Says an editorial writer in The Electrical Review (April 5):

"It is enrious to note how nearly all of physics and chemistry has come to be regarded as electrical. This has even gone so far that the search, protracted through many years of the last century, to discover a mechanical explanation of electricity and its action has been almost transferred into a research for the electrical explanation of mechanics. Already tentative theories have been timidly advanced looking to the suggestion that mass, that apparently cardinal attribute of matter, is after all an electrical phenomenon, and that even gravitation may fall measurably within the category of electrical manifestations. Perhaps by this substitution of one mystery for another we have not advanced so far as we might naturally be led to think; but no insight that can be gained into the working of natural forces or into the processes of nature is nnavailing. With every addition to our knowledge we come closer to the great and final generalization which shall open for us the door to the inner sanctum of the universe.

"It is true that we can not yet define what electricity is, nor, for that matter, can we define anything in absolute terms. We do not yet know even what is the nature of matter or of force or of the all-surrounding other. But every new step that is not founded upon a false conception leads us inevitably nearer to the truth, nud nearer to that final understanding which no man of science can fail to feel is the ultimate heritage of the race. The older idea that nature itself was an insoluble problem and that the mystery of the universe was one that no man could ever unfold is pussing away, and recent research has done much to show that we may hope in the end to know the real and ultimate rensons of things-the actual logic of cause and effect,

"Toward these solutions the new science seems inevitably to tend. Already the atomic theory of Dalton, the foundation of what has been regarded as chemical science, is shaking, and a new light has been east upon some of the most difficult and obsense regions of chemical and physical action,"

#### STEEL-CUTTING WITH THE ELECTRIC ARC.

"ONSIDERABLE prominence has been given of late in the daily press to the fact that steel can be cut, or rather melted, by the electric arc. According to the newspaper writers no safe may be considered burglar-proof any longer, and bankers are in a panic. Readers of THE LITERARY DIGEST will recognize in all this a repetition of a similar discovery and reported panic that was duly chronicled in this department several years ago, At that time some of the technical papers made much of the burglarious possibilities of the are, apparently with a view to the Invention of electrical safeguards against it. Now, however, the electrical press dismiss the matter with curt notice. Says Inc. Electrical World and Engineer, under the heading "A Newspaper Discovery":

"The ability of the daily newspaper reporter to make a brandnew discovery out of some old and well-known practise is well illustrated by the amount of space recently given in a large Chicago daily to the alleged new discovery by a storage-battery maker in that city of the process of cutting steel with the electric arc. Of course, the use of the electric are as a substitute for the drill has long been known, and as far back as 1895 ares of large current volume for piercing and cutting heavy metal vault plates and steel girders were practically applied in a workable method by Mr. Clyde I. Coleman at Chicago. Since that time much metal cuiting with heavy ares has been done in that and other neighboring Western exties, and it has proved a great help and time-saver in some cases where alterations in steel frame buildings or in large chrome-steel vaults have been made."

Of course, the fact that the method is not new does not make it any the less true, and apparently it is one that in favorable circumstances might be used by burglars, even if it does not quite enable them to cut open safes "as one would cut cheese with a knife," in the words of the reporters. Says the Springfield Republican, condensing the Washington correspondence of a New York daily:

"The first public exhibition of this invention was made not long ngo in Milwaukee. An enormous boiler foundation was to be removed from the basement of a building. It was impossible to get this great mass of metal out of the building as it lay without tearing down a portion of the walls. And it was seemingly impossible to cut the plate into pieces. Some one mentioned the new process of cutting steel like soft butter, and the inventor was invited to go to Milwankee and make a test. The inventor ensconced himself in a little steel house, placed two pairs of blue spectacles on his eyes, and, after connecting his carbon point with an electrical current, touched the steel plate. Speciators saw a brilliant flame shoot up. It was a white light, producing extreme heat, and nearly blinded the onlookers. The operator was well protected, and did the work with apparently little disconfort. At the rate of a foot in the minimes, cutting or burning a wide space in the plate, the carbon point with its wondering lower worked along, and in a short time the enormous mass of steel had been reduced to fragments that could be easily handited.

"The matter was reported to bankers of Chicage and Milwankee, and they investigated the matter carcially. They at first found some comfort in the belief that the value of the carbon point as a criminal agency was virtually nullifield by the fact that considerable voltage was required, and that a bright light is caused by the carbon point when it is in operation. This comfort, hwever, has since been removed by experiments which have been conducted by the inventor limited and by an investigation which has been made by Treasury Department experts.

"The inventor makes the statement that his apparatus is simple and can be operated by a current of only go votles. Such a voltage can be obtained by tapping the wires of almost any large building. The modern office building is altie with electric wires, and a shrewd operator could easily find a surface main ang ext from it all of the power needed to me his cardon point. The inventor, however, has obviated the necessity of tapping wires by constructing a little storage-battery which he uses in connection with his work. This hattery has 2s cells, and the inventor gets just as satisfactory results with this as with a direct or alternating current. The power contained in an ordinary electric automobile would be sufficient to do the work."

### INDOOR TARGET-PRACTISE WITH GREAT

THIS feat, which would seem impossible, is now accomplished in the armory of the Thirteenth Regiment, Brook lyn, by substituting compressed air for powder. The guns used are only models, but they work perfectly and the dimensions,

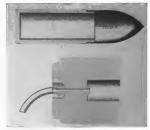

REAR VIEW OF \$ INCH OUR SHOWING COMPRESSIONAR ATTACHMENT AND DUMMY SHELL.

Converge of The Scientific American (New York).

form, and functions of every part are exactly the same as in the army guns installed in coast fortifications. Since the traversing and elevating mechanism and the mechanism of the breech of the gun are identical in design with the service gun, the full benefit of drill with actual guns is obtained. Says The Scientific American (March 29) in describing these interesting

"It occurred to Licut. Kingsley L. Martin, who is one of the civil engineers in charge of the construction of the new East

DET GES OF DUMMY SHELL AND COMPRESSED AIR ATTACHMENTS AT BRS ECH OF 8-INCH GUN, Courtesy of The Scientific American (New York).

River Bridge, that the value of the gan drill, to say nothing of its interest, would be greatly increased if the weapons could be arranged to fire dummy shells at actual targets in the armory, lowder was impracticable for three reasons: First, that there would be danger of cracking the thin cast-iron linings which are inserted in the dummy guns to earry the rifling; secondly, that

the concussion and noise of the discharge would be undesirable and dangerous to the glass windows and lighter structures of the armory; thirdly, that no projectile that would withstand the sheek of powder discharge could be made so light as not to injure the armory floor when it fell.

"The compressed air is led into the powder-chamber through the breech-block in the manner shown in our illustration. The mushroom head and the spindle were removed from the breech-block and a 2-inch pipe threaded at its ends was introduced in place of the spindle, and an air-tight connection made by screwing up a pair of flanges tightly against the front and rear faces of the breech-block. To the outer end of this pipe a length of fire-engine hose was attached by means of a couple of clamps, the other end of the hose being connected to the compressed-air main. When the order to fire the gun is given, a quick-opening gate-valve admits the air instantly to the

"The first projectibes used were cylinricial with fait heads, but for the future pointed heads of molded rubber, of the kind shown in our illustration, will be substituted. In the earlier projectiles, the body was made of rubber helting for the 8-inch was made of rubber helting for the 8-inch was made of rubber lediting for the 8-inch was made of rubber helting for the 8-inch and bases consisting of cup leathers. The 4-inch shells were paper tubes with wooden disks at the ends and a felt rilling band. The new 8-inch shell, shown in our engrav-

one-quarter of an inch in thickness, with a disk of wood at the base, and with the overlapping pointed rubber head riveted to the inner cylinder, as shown. As we have already stated, the guns are fitted with a half-inch liner, in which the rifing is cut. The rifting band in the case of the dummy shells consists of a strip of felt or leather, and it was found that this answered admirably.

"Ha a recent trial of the guns, the gun crews were taken from the Third Battalion of the regiment. Base lines and stations had been previously established, and the azimuth, plotting-board, and rangefinder were used in getting the proper elevation, etc., just as they would be in actual service. The stations were connected by telephone, and also signal flags, wielded by members of the signal detachment of the regiment, were used as a means of comtention of the station of the signal station of the signal tention of the signal station of the signal station of the twenty from the spine rapid-free gun, the majority of which were hits; and this in spite of the facts that the target was moved and the angles frequently changed."

#### CURIOSITIES OF THE HAND.

U NDER this title a number of interesting facts regarding the human hand have been collected in an article contributed to La Science Illustrée (March 15) hy M. G. d'Angerville. The writer begins with a description of some curious anomalies and deformities of the hand. Ile says:

"An infirmity as frequent as it is little noticed is the presence of a sixth finger. We say that this is little noticed when the supplementary finger is

LYMPHATIC VERSELS IN THE PINGERS, 1 and 5, Network of capillary lymphatics, 3, Roots of the larger vessels. 4. Large vessels leading to the heart.

well formed; the more or less authentic tale is told of a husband who failed to notice until several months after his marriage that his wife was six-fingered. In asking for her hand he lad got more than he bargained for—at least, so far as fingers were concerned.

"The supplementary finger is a soutelmes a a second thumb, which is very much in the way; more often it is a second index or little finger. In this case the supplementary finger follows the movement of the other fingers, and can pick up objects. Seven-fingered hands are not extremely rare.

"Polydactylism is easily transmissible by heredity. It affects sometimes not only the two hands but also the feet, "Ectrodactylism, or re-

duction of the number of fingers, is also quite frequent. In fourfingered hands the fingers are placed symmetrically and include, so to speak, two thumbs, opposable to two other fingers. Some hands have but three fingers; others only two. This anomaly is known commonly as "lobster-claw."

In normal hands, M. d'Angerville tells us, the middle finger is always the longest; the thumh and little finger the shortest, the lodes and ring-fingers being intermediate. But here he notes a curious point. With many persons the Index is longer than the ring-finger; with others the reverse is the case. Professor Ecker of Freuburg has taken up this question. He remarks in the first place that in large monkeys—the gerilla, the chimpansee, and the corag—the index is always aborter than the ring-finger. Of 2s negroes the fing-finger was found to be longer than the index in 2 x cases by about 8 millimeters [5] (incl.) in the remaining case the length was the same. With Europeans, the index is sometimes longer and sometimes shorter; with women the ring-finger in often shorter. In antique works of art the index is always longer than the ring-finger, Ecker thinks that the long

index-finger indicates a higher type of hand and that it is found by preference among women. An Italian anatomist, Dr. Mantegazza, has taken up the investigation. In a series of 711 observations he finds that the index is generally shorter and that equality of the two fingers is very rare. The long index, he also finds, is met most frequently among women. M. d'Angerville assures us that the relative lengths of these two fingers has no racial significance. It is not an anatomical characteristic, and we can not properly affirm either that man has an index-finger shorter than his ring-finger or the versa. He goes no to say;

"The hand may play a very important part in anthropometry. M. Bertillon takes account of this is his system. It is curious to find a similar process in use in Annam. To identify a person, a find a similar process in use in Annam. To identify a person, a find person of his left hand; the base of the angle and the distance between the pitalanges are noted by marks. This piece of hamboo is kept, and when the person comes again to the village his identify as established by placing if the tween his findshed by placing if the tween his fingshed by placing it between his fingshed by the property of the

"In Annam, also, the signature, in the case of illiterates, is replaced by measurement of the index-finger. The illiterate seizes the writing that he wisites to sign between the index and the middle fingers ou that the angle between them just touches the edge of the paper; then the place occupied by the index-finger is carefully marked by punching the paper, noting the base of the nail, the knuckles, etc. ... The signature of a woman is the left.

"Another authropometric index of the first rank is the digital print that has often been discussed. By pressing the finger as an inked plate and then on a sheet of white paper, there is left on an inked plate and then on a sheet of white paper, there is left on on the latter the trace of a thousand thy ridges formed by the charge agglomeration of the sudoriferous glands. It is impossible to find two prints exactly alike.

"A distinguished pianist, Madame Jaëll, has conceived the ingenious idea of applying finger-priuts to the study of the qualities of touch and to their improvement. By this method it is possible to ascertain how the pupil applies his fingers to the keys, and thus his touch can be regulated and systematised.

"Dr. Feré, a well-known scientist, replaces chiromancy by an examination of finger-tips. The palmist wants the whole hand; the end of the finger suffices for the doctor. This physician maintains, in fact, that the more fine, detailed, and delicate are the digital prints, so much more perfect is the action of the finger and so much superior the man. This is quite possible,

"This hair is evidently the remains of the fur that our prehuman ancestors possessed. . . . It is thus unequally distributed because the end joint is much more exposed than the others to contact and friction.

"The hand is a factor of the first importance in hygiene. Certain maladies, including some of the most serious, are transmited through it. 'How many people,' says Dr. Pinard, 'takeo df heir shoes, solling their hands with the duat, and then sit down to a meal without washing! Is it necessary to explain how contagion may result?'

"Again, the hands, which in the case of a workman are always in contact with his tools, and in any case are always in motion, are more subject to wounds and hurns than other parts of the body. Every tesion of the skin is a door opened to possible latefaction; so the means of defense are very abundant in the hand. The lymphatic acpillaries form over it a thick network, especially at the ends of the fingers. . The leucocytes or white-hlood coputacles abound in them, and when a burn opens the gate of invasion to microbes, they hasten to the spot, surround the tiny invaders, and digest them. This is the important phenomenon of phagocytosis discovered and studied by Metchnikoff."

—Translation made for Tux LITLERAN DIGEST.

Infection of Oysters by Sewage.—Those who are afraid to eat oysters because of the possibility that they may contain typhoid germs will not be greatly reassured by an inves-

tigation on the oyster-beds of Narragausett Bay described in a paper read before the American Bacteriological Association by Caleb A. Fuller, of Brown University. The following are his conclusions as abstracted in Science:

The city of Providence discharges, daily, about 14 000,000 gallons of sewage into upper Narragansett Bay, chiefly through a single main. This sewage is carried down the bay by tide and comes into more or less direct contact with some of the ovsterbeds. Samples of water and oysters were collected from different localities in the bay, and analyses made before the material was six hours old. The ordinary tests for sewage contaminations were used, the fermentation-tube, carbol broth, and litmus lactose agar. The results showed that water, oysters, mussels, and clams from a point one-quarter of a mile distant from the sewer opening contained three varieties of intestinal bacilli, and water and oysters from a bed two miles below the sewer contained the same organisms. Thirty per cent, of the oysters and about sixty per cent, of the water samples from a bed situated in a strong tidal current, about five miles from the sewer, contained the common colon bacillus, and forty per cent, of the oysters and seventy per cent, of the water samples from a bed in slaggish water, five and a quarter miles from the sewer, contained the same organism. Oysters from a bed six miles and one-half below the sewer contained no colon bacilli, altho the water showed their presence occasionally on a falling tide. Beds still farther down the bay were entirely free from contamination.

#### SHALL WE BURY ALL THE WIRES?

THE enormous expense of reconstructing overhead telegraph systems throughout the country, due to the wholesale overhrow of poles and wives by February's genes sleet atorn, has set the telegraph people to thinking. Says The Electrical World and Engineer (March 20) in its editorial columns:

"The question arises whether, in view of the enormous cost of restringing the destroyed lines of wire, it would pay to carry the wires in the open country underground. In large cities the wires are buried already. This is a very large question, involving great outlay and engineering difficulties. It is a question of engineering economics. It would seem, however, that under existing conditions it would not pay to bury the wires at large, While the buried wires would be sheltered from sleet, they would be at the mercy of pick and plow. Wherever a wire runs, through earth, water, or air, its continuity is threatened by special dangers, and immunity is n mere matter of degree. Moreover, there would be enormous expense in making and laying the wires and relatively large expense in repairing them, althorepairs might be less frequent. The buried wires would be very much slower in transmission than the overhead wires, and the cost of transmission would be increased, ,

The solution of the difficulty must be found along existing methods of construction. As time goes on it will probably be found economical to use larger and stronger telegraph wires and stronger poles, or to increase the capital cost of trunk lines in order to reduce the cost of maintenance and repair. It is quite likely, however, that it would pay to carry a light underground cable of twisted pairs of insulated wires between important cities, such as New York, Philadelphia, Baltimore, and Washington, which are not far apart, and where the expense of cabling a few wires would be justified by the necessity of maintaining telegraphic communication under every condition of weather. These wires would form a handful of conductors as an alternative route to the ordinary overhead trunk lines, and while they would be slow-speed wires for the quantity of copper they contained, they could, with sensitive instruments, be made to carry all the essential telegraphic traffic during emergency. Outside of such selected underground trunk lines, we must be prepared to carry wires overhead over the length and breadth of the land, in stormy weather or fine. Moreover, if wireless telegraphy or telephony impend, on land, to any serious extent, it can certainly be largely used in such emergencies of storm and stress, if only as a 'stand-by ' auxiliary, like fire-escapes and lifeboats; and then the expensive undergrounding of cross-country telegraph and telephone wires would prove to have been rather unnecessary."

Is the Mushroom Nutritious?—In reference to the notion long held that the mushroom presents the same composition as that of animal flesh, the London Lancet has this to say:

"In one repard, at any rate, the mushroom does resemble a beefsteak-in that it contains practically the same amount of water. But the dry solid constituents of the mushroom differ very materially in kind from the solids of meat. The most important difference is due to the rich proportion of proteids-the so-called flesh-formers-in meat as compared with the feeble amount in the mushroom. This fact, as ascertained by recent analyses, hardly justifies the mushroom being regarded as a 'vegetable beefsteak.' It may be a blow to the vegetarian, but he would have to consume at least ten pounds of mushrooms in order to gain the equivalent of a little over one pound of prime beef. Indeed, in the light of modern inquiry there seems to be no reason for believing that mushrooms possess any greater food value than other ordinary fresh vegetable foods, and in many respects they compare unfavorably with them. Still, the fresh, tender mushroom is undoubtedly easily digestible, and as it contains earbohydrates in addition to some proteid, it is obvious that it is of some dieteric value. This value is not comparable with that possessed by essential foods such as meat, milk, and eggs, The mushroom, however, contains an unusual proportion of notassium salts. Few will deny that the mushroom is an excellent adjunct to many dishes; it has an appetizing flavor, and this quality alone makes it dietetically valuable,"

Height of Birds' Flight,—Some data on this subject, collected by Yon Lucanus and communicated by him to the International Zoological Congress at Berlin, are given in the Revue Scientifique:

"The aeronant Hergesell of Strasburg met, in the course of his ascensions, an eagle at a height of 3,000 meters [9,800 feet]. On March 10, 1890, some aeronauts saw a lark at 1,000 meters [1,280 feet], and on July 18, 1899, two crows were met at 1,400 meters [4,590 feet]. But these are exceptions; birds are rarely found above 1,000 meters; above 400 meters [1,300 feet] the number is very small; most of them live in the zone below this. The German Ornithological Society has made experiments to study the flight of birds in the upper strata of the atmosphere; birds taken up in a balloon were released at different heights between 900 and 3,000 meters. The birds taken were pigeons, except in one ease, that of a linnet. When the air was clear, the birds dropped vertically toward the lower strata; but if clouds hid the lower atmosphere the birds flew at first around the balloon only to dart down like arrows as soon as an open spot presented itself. The influence of the presence of clouds on the sense of direction nossessed by pigeous was proved by the following experiment. Carrier pigeons were released at 50 kilometers [31 miles] from their home, in cloudy weather; the first pigeon took three hours to return, the second an hour longer; and the others did not arrive until evening, altho they had been released early in the day. The experiment being repeated in clear weather, the pigcons made the same jonracy in an average of 45 minutes." Translation made for THE LITERARY DIGEST.

#### SCIENCE BREVITIES.

"KNOS SOLOMOV was right in a good many things," says The Historial K-rion." It crainity begins to appear as if nothing is centifyed year. On the occasion of the seventy-second annual featival of the school-children of Beston, held in Music Hall of that tity on July 41, 86, Wendell Phillips was the orator. Among other things he said: 'I supect, if I tive forty years, to see a clergoph that will seed messages without wrees both ways years, to see a clergoph that will seed messages without wrees both ways telegraphy has yet likes years once it which to cluff completely as

"OMAY during very recent years," says Prof. W. L. Moore, of the Unived States Weather Brearan. In The Marine Perior, "have we begin to realise how extremely this is the stratum of air over to the earth that has suffiant very thing the profit of the profit of the profit of the profit of the state of the profit of the profit of the profit of the profit of the Clip observatory from an elevation of su-feet above the street to an election of yor feet has consed an apparent lowering of the mean annual temperature of 35 degrees. On the hottest dept in summer, if one could be cool as to be pleasant and conductive to bodily vigor." a temperature of cool as to be pleasant and conductive to bodily vigor."

#### THE RELIGIOUS WORLD.

#### OUTLOOK FOR THE CHRISTIAN RELIGION IN ASIA

OHN R. MOTT, secretary of the World's Student Christian Federation, who has returned to this country after a most successful missionary tour through Japan, China, India, and Ceylon, gives it as his deliberate opinion that "the non-Christian religious are losing their hold, especially on educated men." Writing of the impressions recorded by him during his trip, he says (in The Congregationalist and Christian World) ;

"On my journey through the Orient six years ago, I formed the impression that the power of the non-Christian religious was waning. Recent observation has strengthened this opinion. In Japan, Buddhism is the only non-Christian religion, Shintolsm being really nothing more than a patriotic association. Among the lower and illiterate classes, especially in the country districts. Buddhism certainly still exercises great power. In the centers of population, however, even among the lower classes, its influence is weakening. Among educated and thinking men it has practically no hold as a religion. Such hold as it does have is more as a result of custom than of conviction and principle. So far as it attracts young men, it is as an antiquarian matter or as a philosophy. I met a few students who professed interest in it as a philosophy, but I do not recall one who regarded it as his religion in the sense of being a spiritual, regulative force in his

"All that has been said about Buddhism in Japan might also he said of its position and influence in Ceylon,

"In China the non-Christian religious are Buddhism and Taolsm. They both manifest less enterprise and vigor than does Buddhism in Japan and Ceylon. In fact, they show no activity whatever, but rather give one the impression that they are played out. As a religious power they are practically nil, but their influence as custom and as superstition is great. Strictly speaking, Confucianism can not be regarded as a religion. Should we consider ancestor worship as upheld by Confucianism a religion, it must be admitted that its hold, while perceptibly loosening in many places, is tremendous, taking the country as a whole. It is still altogether too true of China that the living are in the grip of the dead

"Hinduism is the principal non-Christian religion of India. As a social system its power is still very great. Caste observances are losing their hold to some extent in the cities. But tho the outward observances are being less religiously followed, the spirit of caste is apparently about as strong as ever. Popular Hinduism is losing its hold. The great religious festivals have become virtually only a show. Very few thinking men adhere to aucient Hinduism in an unmodified form, and not many of them have a real, vital faith in it as a religion. Within the past few years there has been a movement to revive Hinduism. This is the result of patriotic causes and not of religious motives. It is being strongly emphasized that the truly patriotic course is to stand by the ancient religion of the land.

"Mohammedanism has a stronger hold on its adherents than

has any other non-Christian religion. This hold is not relaxing, apparently, so far as the illiterate classes are concerned, but signs are not wanting that it is weakening in the case of educated men.

The decay of the non-Christian religious, claims Mr. Mott, has been accompanied by an equally marked growth of vitality in the Christian religion, which "Is now so securely planted in Iapan, China, Ceylon, India, and some of the other nations of Asia that were the missionaries obliged to withdraw, it would live on and spread as a self-propagating force." He continues:

"There are many facts to support this conviction. In each country the native church has leaders who possess the spirit of independence, consecration, and real leadership. Among them one thinks at once of such workers as Honda, Kozaki, Miyagawa, Ihukn, Motoda, and Uemura in Japan; Meng of Paotingfu and Shen of the London Mission in China; Dr. Chatterjea of the Punjab, Banurji of Calcutta, the Satthianadhans of Madras, and Pundita Ramabai of Western India. With these and scores of other clerical and lay leaders who might be named guiding its affairs, it is inconceivable that the church perish in these lands, Moreover, not only does the Church of Christ in the Orient have leaders of genuine Christian experience and of large ability, she also has among the rank and file of her membership many who impressed me as comparing favorably with Christians of the West in grasp of the essential doctrines of our faith, in depth of spiritual insight, in exemplification of the spirit of Christ. in unselfish devotion and in burning zeal. The fact that in each country the number of self-supporting churches is steadily increasing is further proof that Christianity is anchored in different communities. I met scores of pastors and other Christian workers who are serving the church on much smaller salaries than they could receive in commercial or political positions,

"The missionary spirit is developing in the native church in an unmistakable manner. It is to be seen in Japan in the efforts put forth by Christians on behalf of Formosa, Korea, and the soldiers in China. It is to be seen in Korea, Manchuria, and China in the immense amount of personal dealing carried on by the Christians within the sphere of their daily calling. It is to be observed in Ceylon in the Jaffua Students' Missionary Association, which is sending natives to help evangelize Southern India. Again we note it in the growth of the volunteer movement in India, and in the starting of bands of voluntary workers in Calcutta and other student centers of India. It is a most impressive fact that the recent great revival in Japan has been organized and carried forward very largely by the Japanese them-

The supreme need, however, now as in the past, concludes Mr. Mott, is "more missionaries." There never has been such an opportunity as the present, he says, for aggressive evaugelistic effort in Japan and in several parts of China and India. But the workers should be thoroughly furnished men. "A few hundreds of well-qualified missionaries will accomplish far more at the present time than would thousands of men of merely average ability and of insufficient equipment,"

#### A DEFENSE OF THE SPANISH INQUISITION.

THE Spanish Inquisition, which is generally regarded by Protestants, at least, as furnishing one of the blackest pages of human history, is not without its apologists. The latest defender of it is a woman, Eliza Atkins Stope, who writes in two recent issues of The Ave Maria (Rom. Cath., Notre Dame, Ind.). "There is, perhaps, no historical question more deeply overlaid with prejudice, fallacy, one may even say superstition," she declares; "none as to which popular conceptions are farther removed from the facts as scholars know them." She ascribes popular ignorance regarding the subject of the Inquisition to many different causes, but chiefly to the exaggerations of Protestant historians and to the lack of any capability, on the part of the great majority of people, to look at past events in the light of historical perspective. She writes:

"The Inquisition, like all important, long-enduring institutions, was no arbitrary erection, but the natural and spontaneous outgrowth of conditions deep-seated and far-spread. Ecclesiastical courts, judging questions of faith and visiting hereties with ecclesiastical penaltics, had indeed been matters of course from apostolic times; but from the reign of Constantine the civil power, too, had been held responsible for the religious belief of the people. And the Constantine code regarding heresy had been taken over, with trifling modification, by the governments of renewed Europe; the apparatus for its enforcement being varied according to circumstances. As in course of time the interests of church and state became more and more nearly identified. the conception of heresy as a crime against society as well as against religion came to be practically universal in Christendom, In the general view, the right of government to inflict even capital punishment in cases of flagrant heresy was unquestioned."

During the twelfth century, the writer goes on to say, there arose a number of heretical sects, which directly menaced the public order and morality of several of the leading European countries. The turbulent practises of the sectaries were "really civil outbreaks under religious pretexts." In the absence of standing armies and protective police, the ecclesiastical courts were compelled to adopt stern methods of repression, and but for their action "Europe would have been drenched in the blood of religious war before the beginning of the fourteenth eneture, and the march of civilization would have been impeded beyond calculating." From this action, tentative and relatively feeble in its beginnings, there at leugth emerged a unique tribunal—the Inquisition. It played its most important part in Spain during the fifteenth and sixteenth centuriers, when that country was best "by perplexities many and grievous." We quote the writer's account of the problems confronting Spain at that time:

"Let Protestantism get a footbold in Spain, and the immediate result there, as it has been elsewhere, would be civil war; and civil war would be more disastrous to Spain than it has proved to other countries, inasmuch as her situation is more critical. The elements of the monarchy are heterogeneous, lightly cemented, ready to part at the first shock. Factions flourish everywhere. The Moors are still in sight of Spain; the Jews have not had time to forget; both are feeding fat their ancient grudge, alert to strike at their enemy of old. The Protestant corsairs of France and England, ruthless as their fellow believers on land, are swooping on the rich-freighted Spanish fleets; Spain must either crush or be crushed, and the engine of defense is at hand, In the eyes of her sovereigns and of the mass of her people, too, the Holy Office is the only hope. 'Tell the Grand Inquisitor,' writes the abdicated menarch, Charles V., from his menastic retreat amid the chestnut and orange-groves of Estramadura,-'tell the Grand Inquisitor and his council, from me, to be at their posts and to lay the ax at the root of the evil.' Solemnly from his convent death-chamber does he conjure Philip, his sen and successor, to ferret out and bring to justice every heretic in his dominions. 'Cherish the Holy Inquisition. So shall you have my blessing and the Lord will prosper all your undertakings."

Count de Maistre, a brilliant French apologist for the Inquisition, has said: "Never can great political evils—never, above all, violent attacks upon the body politic—be prevented or suppressed but by means equally violent. If you think of the severities of Torquemada without dreaming of those they prevented, you cease to be reasonable." The present writer, who quotes this statement in support of her position, points out that Spain was largely free from the revolutions and compiracies which rent most of the European countries during the sixteenth century, and maintains that this period of comparative quietude was due to the repressive measures of the Inquisition. She continues:

"An Inquisition court began operations by giving out a time of grace, during which 'every now could be absolved and sawed from heavy punishment who, conscious of apostasy, presented himself and dul penance." The grace was often extended; and children of heretics, who might be supposed to have been led astray by their parents, were, if under twenty, to be kindly received even after the expiration of the time. An order for arrest could be issued only by the joint action of two focal Inquisitors,—once a jurist, the other a theologian; or, if these disagreed, only by the grand counelt. Those thrilling atles, according to make the control of the co

"A word here concerning the dungeons of the Inquisition. Like the prisons of the past in general, most of them were, no doubt, in outrageous violation of what we—thank heaven!—call common humanity; but—and this is the solo point with which we have to do—there exists no scintilla of evidence that they were ever one whit more dreadful than their contemporaties......

"Lacking the prisoner's own confession, the statutes of the Holy Office made conviction for heresy difficult to a degree. If, however, proof of guilt were held to be practically complete, the tribunal did its utmost to extort confession; in such cases, and

In such only, it sometimes made use of-torture, 'Aha!' ery those who condemn the Inquisition off-hand. 'Torture! Thumbscrews, redbot pincers, the rack, the press, the wheel! For these at any rate you will hardly find anything to say.' Certainly no one at this time of day is going to defend torture per se; but we are bound to consider that there has been a complete bouleversement of public oninion on this point: that while torture was employed by the Inquisition, it was likewise a routine feature of riminal proceedings the Continent over. In England, too, as Hallam has it, 'the rack seldom stood idle in the Tower during the latter part of Elizabeth's reign'; nor were it and its grucsome fellows permitted to rust in the hands of the early Stuarts. -that is to say, torture was high in English favor throughout the period during which the Holy Office most frequently resorted to it. The records of the Star Chamber and of other royal tribunals in England-which, he it remembered, were, like the Inquisition, secret courts-have never been thoroughly gone over; but such reports of them as we have go far to justify the apologists of the Inquisition in challenging comparison, as they do, with English as well as continental practise in this regard."

In brief, says the writer, we have totally misunderstood the luquisition, because we have attempted to judge it by the standards of our time, not by those of its own. We have everlooked the frail human nature of 'men of hike passions with ourselves—eften weak, often cruel; yet by no means devoid of 'capacity,' of spiritual earnestness and asoluration.'

#### IS THE AMERIC IN SABBATH IN DANGER?

THE Rev. Dr. George C. Lorimer, of New York, in a recent sermon on "The Religious Crisis in America," made the startling prophecy that "in fifty years we will have no Sabbath," unless present tendencies are checked. He said, in part

"There is such a thing as a religious crisis in America, however much we may scoff at the idea. Religion, especially evan-

REV. DR. GEORGE C. LUNIMER.

gelical religion, is to-day of very low vitality. The attendance at church service is shamefully small. At the evening services this is painfully apparent. We are attacked by secular writers. They tell us that the ministry is deteriorating; that they and their churches have lost their influence to the schools, and that education alone can encompassall the activities of life. They say that the churches spend more for the superfluities of life than for the Gospel, and point with scorn

at the ice-cream suppers and other cheapening methods of securing mouey to support the Gospel. They condemn us for sending missionaries abroad when our people are spiritually starving at home.

"Some phases of the crisis are disheartening. In the past hundred years, more than 23,00,000 foreigness have come to our shores. Many are God-fearing men, but many more are entirely out of harmony with our religious institutions. Some 1,20 arrive in our land every day. The majority are not from Scotland, England, Irianda, and the North of Europe, but they are Majyars or are from Italy and Southern Europe, and have no incliation to our feet and the control of the control of the control our feet of the control of the control of the As has been said, we live for money by day and pleasure by night. I have no fear is saving that at the present rate at which we are living in fifty years we will have no Sabbath. And the saloons? It will no longer be a question of opening them for a few hours on Sunday, but they will be open every minute of the week."

Dr. Lorimer's statements have aroused considerable interest and discussion in both the religious and secular press. The New York Sun makes the following comment:

"The 'American Sabbath,' as the method and theory of observanceof Sunday banded down from Puritainism are called, is manifestly passing away, and it fifty pears it may be gone altogether. Great changes due to declining religious faith are taking place, and if they continue at the rate of progress they have reached during the last generation the religious situation fifty

years hence must be transformed very radically. . . . . . . "But the change which has taken place in the observance of Sunday can not be said to be a consequence of immigration, The 'American Subbath' as it was in the past is an institution which has departed largely from New England communities, where these foreigners are unknown and few of the foreign-born of any nation or any period of immigration are to be found. Of recent years, church-going, once a necessary badge of respectability, so that those who neglected it were under social reproach, has fallen off without the visitation of any such penalty on those who refrain from it. Sunday has become more and more a day of social festivity, and outdoor recreations once frowned upon as disreputable are now pursued without criticism. The prayermeeting, formerly one of the most important of religious institutions of the America about which Dr. Lorimer talked, preserves now only a feeble existence. . . . . .

"The religious crisis," Dr. Lorimer, can not be attributed to any such particular influences as you describe. It has a far larger and broader cause, and the character of the present immigration has had nothing to do with it."

Several Roman Catholic papers quote The Sun's comments with words of approval. While the religious services in evangelical churches are notoriously neglected by their nominal adherents, "remarks the San Francisco Monitor (Rom. Cath.), "Catholic services, to which the immigrants of whom Dr. Lorimer complains chiefly subscribe, attract ever increasing multi-tudes for Sunday worship." The Philadelphia Jestich Est. Journal thinks It at singular fact that the Christian denominations which have "the powerful aid of a Sabbattle enforced by law "should be in the condition described by Dr. Lorimer. It containss:

"Similar conditions confront the Jewish people, but they are largely due to the great disadvantages which the Sabbath problem presents. There are few, if any, considerations of hard necessity to prevent most Christian people in this country from active attendance at ehurch. And still the majority of them stay away. After all is said, it must appear that religious largif in both church and synagog is largely due to the materialistic soliriot (the age.)

An interesting comment on the questions at issue is made by Mr. F. M. Camp, the head of a new-bureau in New York which supplies the daily and periodical press with current church news. Mr. Camp takes the view that a faise alarm has been raised, and declares that he can "puve that churches are better supported to-day than they ever were before." Withing in The Church Economist (New York, April), he says:

"This support may be taken (1) in the number who unite with them, which number outstrips the growth of population; (2) in their finances, which are greater in aggregate amount, and in proportion to sums spent in other ways, than ever before; and (3) in moral support, for there was never a moral question which affected more people than the recent arbitration convention between equival and labor, and the church was more largely odic, than any other one interest.

"Concerning attendance njum public wership on Sundays or week-days permit us to say that our trained men, who perhaps get to more churches than anybody else in New York, find the churches filled. There is no fallingsoff. On the contrary there is a gain, because there are many more churches. "During Lent just closed the noon-hour services in New York were attended by more people, by actual count, than in any previous year. And there were no 'star' preachers or scusational-ists to draw the crowds. Preachers were such as the churches can aford the year round. We can furnish figures to prove these Lentenservice assertions if anyholy wantstem. Finally, regarding the statement that churches are not as well supported as formerly being admitted by length and haymen alike, we beg to say that we can find no clergy and laymen who admit anything of the sort.

"More people attend church on Sundays at the 'regular services' than ever before. But this is a very partial eablist of characteriates attendance. Within a generation a multitude of week-day and extra Sunday meetings have come into vone, many of the very important and largely attended, Comning these in, the aggregate weekly attendance has enormously increased."

### THE CHURCH AS THE MAKER OF CONSCIENCE.

THE Christian church has many functions in the field of evangelistic work and of missionary extension, as well as in the quickening of the devotional spirit; but over and above this stands its task

as "the maker of conscience." To the Rev. Samuel Zane Batten, a Baptist elergyman, of Morristown, N. J., there appears a serious danger of the clinrch's underestimating this purely human side of its message and of its falling into the acceptance of merely conventional standards of morality. He cites two of the ideals that are frequently held up before the young men of to-day, the ideals

REAL BANGEL Z. BATTEN,

of wealth and of militarism. Has the church really spoken out against either of these "false ideals"? He answers (in *The American Journal* of Sociology, March);

"In church and college, in society and in the press, itel men are honored and filtatrend, and are held up as models to be adored and imitated. The influence of all this, as any one can see, is to degrade the common morals; it is to set up a false ideal of life; it is to fire the imagination of the young with unholy and unworthy ambitions; it is to east discredit upon the poorer and humbler workers in the kingdom of God. Every careful student of modern society declares that the reign of commercialism has come, and with the reign of this commercialism the same and continuous of moral values. This commercialism places as and continuous of moral values. This commercialism says expelled and the same and

"Closely akin to this is another false ideal which is set up before the people for home and mitation. As every one knows, the the military ideal has held sway for untold ages over the minds and hearts of men, and the great men of history are langely miitary leaders and conquerors. How for militarism is necessary in an imperfect and evolving society it does not concern us here to Inquire. The military caytain no doubt has had his work to do in the world, and let him have his wreath of laurel leaves, But the military ideal, it is needless to sny, is not the Christian ideal, and the two can never be completely harmonized."

It is also the bounden duty of the church, continues Mr. Batten, to quicken the political conscience of the people. There is no more ominous sign of the times, he thinks, thau that men have ceased to look for unselfish and disinterested service in politics:

"As every one knows, a double standard of morality prevails, and men have one kind of right for their personal and family lives, and a different kind of right for their political and commercial lives. All such things us sentiment, conscience, and love are ruled out of politics, and we are told that the Decalog and the Sermon on the Mount have nothing to do with a political campaign. . . . The chancellor of the German empire has lately declared. 'I can not conduct foreign policy from the point of view of pure moral philosophy. It is not ours to ask what is right and what is wrong. The politician is no judge of morals; he has solely to maintain the interests and rights of his country. Another man, not himself a practical politician, but a political philosopher, Professor Willoughby, declares: 'It is, in fact, quite superfluons to show in this age that from their own Inherent nature divine and moral sanctions can have no application to political matters.' So long as such sentiments prevail in high places, it is not surprising that they should appear in low places. And so long as such sentiments prevail, whether in high places or in low, that long the church of Jesus Christ will have a most fiery and relentless mission."

Mr. Batten next proceeds to inquire into the church's attitude toward social questions, and declares his belief that "in our time the power of Christianity is to be proved by its ability to create a Christian type of human society." On this point he Says:

"It is intolcrable to all right religion that numbers of people should be miserable and needy while there is plenty and to spare in the Father's house. No one who believes in Jesus Christ can believe that it is the will of the heavenly Father that one part of the human family shall go hungry and destitute while another part is living in luxury and case. The most tragic fact about this poverty and Ignorance is not the hunger and suffering, tho these are sad enough. . The saddest fenture about it all is the waste of human life, the fact that the wonderful possibilities in these human brothers are never unfolded and realized. A social and industrial system in which one man controls thousands of lives and is possessed of millions of money; in which able-bodied men willing to work walk the streets in desperation looking for a job; in which thousands of women, owing to oppressive labor and small remuneration, are under a continual temptation to barter womanhood for gain; in which are tenements not fit for pig-sties where women fight with fever, and Infants pant for air and wail out their little lives; in which the sweater's den and the grog-shop thrive-such a society is very far, indeed, from that order which God wishes and ordains."

It may be said that preaching on such controversial topics would be hazardous. To which the writer replies:

"That may be; but hazardous to whom? To the preacher? All the real huzard to him arises from the fact that he is faithless to his trust. To the hearers? Would to God that it were more hazardous to those who are guilty of the monstrous wrongs which hurt their fellows and hinder the kingdom of God!.

"The mission of the church is evident; the church's credentals are clear; the need of the world is great. Nothing could by more weak and pitful than for the churches to confess that whole provinces of life lie beyond their interest. Nothing could be more cruel and cowardly than for the churches to say that they have no word to offer on the problems which make the peril and the opportunity of our time. Nothing could be more calamitous and short-sighted than for the churches to leave to outsiders, to unbelievers often, the discussion of current wrongs and the leadership in moral reform."

#### PROGRESS OF PROTESTANT MISSIONS.

THE Protestant propaganda is invading the countries domiuated by the Greek Catholic as well as those dominated by the Roman Catholic Church. The Vaterland (Vienna), a Clerical organ, has recently denounced the influence of Protestant missions in the Balkan peninsula. According to the Vaterland, large numbers of American, German, and English missionnries are now to be found in Macedonia and old Servia. "Protestant missions," it declares, "are more dangerous than Roman Catholic for the Orthodox faith," for the Protestnut missionaries are devoting their attention to reforming the bospitals and medical service, and educating the poor, all which matters are notoriously neglected by the indolent Turkish authorities, At Ruschuk there are Protestant missions of three kinds, Evangelical, Baptist, and Methodist, the last two consisting exclusively of converted natives. The first are chiefly recruited from immigrant Germans. The Vaterland quotes from a detailed account of an Ægean contemporary going to show that Protestantism is steadily gaining ground at the expense of the Orthodox (Greek) Church: many parents are tempted by the good order, cleanliness, and wholesome food at the Protestant schools to send their children there, and they are then brought up in the Protestant religion.

The subject of the invasion of Protestant missions in Italy has recently been impartially treated by M. de Chanoine Pisani, in the Quinzainle (Paris). He is far from indorsing the opinion of certain Clerical journals, according to which the Protestant missionary is a being without conscience or faith, seeking only his case and trafficking in the Bible as in merchandise. "One should," he writes, "apart from all sectarian spirit, pay homage to the noble sentiments animating men who with insufficient means at their disposal, like the apostles, have succeeded in overcoming prejudice, and bringing about in the heart of Protestinitism a wonderful growth of missions for the purpose of spreading Christianity among the heathen." M. Pisani upholds his own church, the Roman Catholic, but declares that "the grandear of celibacy is sometimes too far above the comprehension and appreciation of the heathen." "We share this belief," comments the Revue Chritienne (Paris), "but above all are we convinced that the Christian family is one of the most important factors of the mission." In support of this may be taken the following passage in M. Pisani's article; "According to the testimony of our Catholic missionaries, the greater part of Protestant societies are recruited from good and wise men, whose lives are edifying and whose zeal bears no resemblance to fanaticism." After paying tribute to the Society of French Evangelical Missions in Paris, and its work, M. Pisani concludes as follows:

"Protestantism is progressing with rapidity, and before this ribrate dide Catholics should redouble their efforts, and develop, for the success of their cause, as much activity, real, generosity, and spirit of self-sacrifice as the Protestant nations. It is the duty of governments to assist a cause that is theirs, for the economic expansion of a people is usually inseparable from its religious expansion."—Translation model for Tue Latternax Discret.

MR FRUITRIC HARRISON, who is now seventy-one years old and has been president of the London Positivist Committee since #86, has decided to withdraw from active service in the English Positivist Society. He recently delivered his valedictory in Newton Hall, London.

Tim Manila American has the following in any on the religious question in the Philippines: "One observal take to Use in the Philippines: "One observal take to Use in the Philippines are in realize that the friests are themselves to Shame for the bitter feeling which prevails against them in these blades. They are arrangen, overbearing a property of the property of

#### FOREIGN TOPICS.

#### THE CAREER OF CECIL RHODES.

\*ECIL RHODES, according to the English papers, was one of those few empire-builders who, like Clive, have attained an enduring renown. His personality is considered at great length in the entire European press. It is best, perhaps, to begin with this appreciation from the London Times, for it gives an idea of the man's proportions in the European perspective:

"He has carried the British flag over a territory nearly as great in extent as another Bestish India. He has done more than any

single contemporary to place before the imagination of his countrymen a clear concention of the imperial destines of our race: and, with all the faults which can not be denied, with all the errors which have marred his noblest work, he stands an heroic figure round which the traditions of imperial history will cling. Mr. Rhodes has met the fate which attends great empire-builders : on the one hand they are enthusiastically admired and arplanded, on the other they are stones of stumbling, they provoke a degree of repugnance, sometimes of hatred, in exact proportion to the size of their achievements. We know how Clive was reviled, and with what persistence Warren flastings was pursued. We remember how rancorously the memory of Pitt was attacked, so that neither in the House of Commons nor in the Common Council of the city of London was it agreed, without the buterest debate, to render him the common postlumous honors which are voted as a matter of course to less exceptional statesmen. To be a great man in such conditions as those which surrounded Cecil

Rhodes is to be certain to arouse passions in friends and opponents which do not quickly subside.

He was "unscrupulous in his methods." according to The Westminster Gazette (Londou), which praises him neverthe-

"We recall what Mr. Chamberlain said to Mr. Barry O'Brien about Mr. Parnell: 'A great man. Unscrupplons, if I may say so. I do not wish to be misunderstood in my meaning of the word "unscrupulous." I mean that he was unscrupulous like every great man.' We wonder if Mr. Chamberlain would say the same of Mr. Rhodes? To do justice to him it must be remembered that gold and diamonds do not seem to be conducive to a nice or exact morality-whether in the case of a pastoral Boer tace to face with the gold-mining Uitlander, or in that of the pashful Britisher intent on making his own fortune and increasing his country's influence. Mr. Rhodes, it must be confessed, had excessive notions of what could be done by money. We all know that it will do much, but he seemed too often to imagine that it would do everything. He was free from vulgar greed; he merely wanted counters for use as stakes in the great game of empire, in which to take a hand was the supreme object of his existence."

The great blunder of his life, it seems admitted, was the Jameson raid, on which point The St. James's Gazette (London) says:

"No one knew better than he, or confessed more onenly, that

his conduct in the matter of the Johannesburg revolt and the Jameson raid was, to use his own word, 'indefensible' in the county of nations. He 'faced the music,' he owned his fault; but he was quite well aware that, in the minds of many, his crime was failure, and the lofty tone in which he was lectured on high moral grounds drew from him the savage sneer concerning 'unctuous rectitude.'

A somewhat unsparing view of the man is afforded by The Daily News (London)

'He had a false ideal. His aims were exclusively material, and his religion was 'the sensual idolatry of mere size.' He had no literary or oratorical faculty, and his phrases were for the most part ineffective. But his famous and much-quoted remark

that 'territory is everything' goes far to explain his colossal failure. It is not only profoundly false. It shows an incurable blindness to all that makes a nation really great. No wonder that Mr. Rhodes could not understand why the Boers should fight for the freedom and independence of their little republics. His favorite book is said to have been the 'Decline and Fall,' But he, naturally, did not understand the moral to be learned from the greatest of modern, perhaps of all, historians. If territory were everything, the Roman empire would neither have fallen nor declined. The truth is that Mr. Rhodes meddled with things which were above him. . . . 11e was a man of remarkable energy, of great determination, who did with money everything which money can do. But there are things which money can not do, and Mr. Rhodes could not do them either,"

"He showed his stay-at-

home countrymen that the days of expansion and colonization were not yet at an end. He plunged them into the heart of what might almost he called a new continent, and proved that the work of the Elizabethans of Clive and Hastings, of the founders of New England and Canada, was not yet exhausted. There were still realms to be founded, great tracts of the earth's surface to be explored, vast populations of savages to be added to the White Man's Burden. The settlement of Rhodesia struck across the closing period of the nineteenth century like a breath from the gallant world of the past. It fired and stimulated that revival of imperial sentiment which other causes had tended to produce, and caused Mr. Rhodes to be regarded, not without some justification, as the man of the new era-the type and personification of Greater Britain."

The British press throughout South Africa speaks of him as a patriot. The Cape Times (Cape Town) says:

"A United South Africa, merging all antagonisms in common interest and patriotism, was the dominant impulse of Mr. Rhodes's life. The lesson to be learned from it is that every son of South Africa, every Afrikander in the best sense of the word, has to devote his energies, regardless of race and political difference, to the great work of civilization and development for which the white races on this continent are responsible."

The death of Cecil Rhodes "leaves the Cape parliament without a man of commanding ability," according to The Argus

CECIL RHODES

(Cape Town), while The Diamond Fields Advertiser (Kimberley) says:

"His loss is felt at Kimberley with greater intensity, and with keener poignancy and personal sorrow than can possibly be felt by any other community, for his death creates a blank in the diamond-fields which will be felt by every living soul, and which is beyond the power of the pen to describe."

Napoleon is the name linked with that of Ceell Rhodes by French papers generally, attho they score him freely. "One of the greatest men in the history of England," says the Echo de Partis, but it declares that his work will not last. One must go back to Napoleon to find a man of so few scrupels in attaining great ends, says the Echoir (Paris). "Scruples did not restrain him," says the Echoir (Paris).

"He negotiated with Lobengula, King of the Matabeles, the treaty that was to serve lim in running that prince and his people. From Mashonaland to Matabeleiand, adventurers, those land fillibusers, spread like a in unination. When they had finlished their work Rhodesia was created, a new empire was boru. The savages had learned that there is a barbarism worse than that of the children of nature, and that civilization commits crimes more fearful than those of the Stone Acc.

His selfishness was cold-blooded, and it trampled over monntains of corpses and through streams of blood, according to the Vossische Zeitung (Berlin), while the Socialist Vorwarts (Berlin) savs:

"Cecil Rhodes was the fauntical pioneer of English imperialism in its specific senses—the creation of a great unified economic domain through a closer union of the British colonies with the metheraland on the one side and an energetic colonial expansion policy on the other side. Rhodes not only stood for this idea in theory, but he set to work with immense energy and lack of scrupic to create a great United South Africa under English sovereignty, a political undertaking which aroused passionated to Dutch eposition, and at last led to a terrible war which has a raged now over two years and the end of which its author has not lived to see."—Translations made for The Laterary Dicent.

#### EUROPE ON CUBA.

THE Cuban republic as it will be, is a subject of much interest to the European editorial mind. The general impression abroad appears to be that the great vested laterests of the United States will not allow the island to get her due. Says the Temps (Paris):

"The Culaus complain that the United States, more cruel than Spain, denies them the means of existence. . . The truss and syndicates which have grown up under the shelter of fiscal and tarnft legislation, of which the object seems to be the creation and maintenance of monopolies, possess formidable power. The federal Sentae itself is scarcely more than the nonuthineer of vast organized capital instead of being, in accordance with the spirit of the Constitution, the amphicityonic council of the sovernick organized capital instead of being, in accordance with the pair of the Constitution, the amphicityonic council of the sovernick organized capital instead of being in accordance with the pair of the constitution of the

The struggle to win tariff concessions for Cubn is then considered in detail, after which the French authority proceeds: "A breach has been made in the ramparts of prohibitive tariffism. It behowes the citizens of the United States to enlarge it."

The right of the United States to interfere in the affairs of Cuba in the event of disturbance, and the assumption of Cuban foreign interests by the State Department at Washington, are noted by the Vessische Zeitung (Berlin), which says:

"Within the limits prescribed by the Americans, the Cubans may move freely. The great unjointy of the population greets this conditioned autonomy as the fulfilment of long-cherishte of the great Union is welcome. Moreover, during their protracted executions, the three circumstances the protectories of the great Union is welcome. Moreover, during their protracted executations with the Americans with reference to the Consti-

tution, the Cubans displayed such self-control and good sense that they may be credited with capacity for self-government."

The new Cuban Government will enter upon its functions on May 20 under favorable auspices, thinks the London Times:

"While electing its own Government, the island remains under the tntelage of the United States, and, without wishing to call In question the elevating influence of representative institutions, we can not help thinking that such tutelage is a very good thing for Cuba and a great help to anybody who may essay the task of administration. . . . The Cuban experiment, however fairly it may begin, can not be satisfactorily carried on unless the United States know how to make Cuba prosperous. The Cubans have the defects of their origin and their climate. They are not among the most hard-working and contented races of the world. Unless they are fostered and helped economically and commercially, the protectorate may be expected to give a considerable amount of trouble. But, whatever the difficulties, we feel pretty confident that the sturdy common sense and energy of the American people will know how to overcome them."-Translations made for THE LITERARY DIGEST.

#### DEATH OF A CREAT HUNGARIAN STATESMAN.

K OLOMAN VON TISZA, the Hungarian statesman, who died in Budapest on March 23, has received almost as much notice as Cerl Rhodes in the European press. Born in Gest, Hungary, December to, 1850, of a rich Calvinist family, he entered public

life carly, became a cabinet minister in 1875, and from that year until 1890 was Premier. Says the Neue Freie Presse (Vienna:

"In Koloman von Tisza Hungary loses the best and truest of her sons and one of the foremost figures of her public life. For thirty-three years in the political advance guard of his native land. Koloman von Tisza, during the fifteen years he was called upon to guide the Hungarian Govern-

KOLOMAN VON TISZA.

ment, stamped it with the imprint of his personality. Its conception of the relation between Illungary and Austria, readed to a certain extent upon the development of Austria herself, eversit this phase of his achievement did not become fully manifest, nutil Koloman von Tisza had surrendered the tiller to other hands."

His career is analyzed at length, after which this authority proceeds:

For his greatest successes in state-smanthip Kolomian von Tissa was indelined primarily to his sharp and clear political in sight, and to his way of taking things practically and settling them practically. He was no man to ride principles, . . . Twas was always rendy to accommodate the practical questions of the day to principle, or, if this was not feasible, to accommodate the practical questions of the demands of the day. His brillmant, trevelours, often evasive coleptence came powerfully to his and not every lettim in the harch. Whi is characteristic easy-going theory in which nothing seemed premeditated, but in which nothing was anything else, he dominated parliament, which remained syellbound by his speech as he cut the arguments of his opponents

Every attribute of statesmanship was his, according to the

Fremdenblatt (Vienna), which even credits him with administrative capacity, which some deny that he possessed:

"Tissa made it possible for Hungary to find the means to discharge her obligations as a civilized state. As he looked about for colleagues, his glance fell upon a young man who to great natural grits untied a training in the modern spirit. It was Koloman Szell, Tissa's first finance minister. What the two accomplished in three short years seemed a miracle. Through rigid economy and an increase in the revenue-yielding capacity of the country, the deficit was reduced several millions and the government credit to strengthened that the issue of Hungarian bonds became a possibility."

From the point of view of internal Hungarian policy, Tisza represented what are generally termed liberal ideas, according to the *Journal des Debats* (Paris).

"But Hungary, like Austria, is subject to such complex ethnical and religious conditions that to govern it rationally it is not enough to liave a simple, well-defined program and to adhere to it and to seek victory for it. A stateman of large ideas must reckon with other factors than those to be taken into account in more homogeneous countries. Now, it may be justly said of the political system adopted by Tiosa that it was defective or initational and the state of the state of the state of the state it aimed at establishing the superienacy and government of two minorities: the Magyar race, to which he belonged, and the Calvinist religion, of which he was a fervent adherent."

But adept as ho was in carrying out his scheme for Magyar supremacy, proceeds this authority, "ho saw a breach effected in the unjust system that formed the foundation of his policy."

"The close of his life was troubled at sight of what is going on in Austria, where Slavism tends to shake off the German yoke, as the non-Magyar elements of Hungary rebel against the Magyar yoke,"—Translations made for Thy Literary Diess,

#### THE TOBACCO BATTLE IN ENGLAND.

THE "characteristics of comic opera" are assumed by the struggle of the American tobacco trinst to gain control of the English market, according to an exhaustive editorial study of the situation in the London Times.

"A financial force has revealed itself to the public as the Amer-

ican tobacce trust, the by the initiated we believe It is more compendiously spoken of as Mr. Duke. We gather from the New York Kreining Fast that the trust is not greatly beloved even in the land of its briti, and that is methods are thought dubious by people accustomed to trusts, somers, combines, and other latter-day developments. It apparently aims at othing less than control of the tobacco trade of the world, but its particular object at the present moment is to monopolic the tobacco business of this country. Its operations have excited some alarm, or, perhaps, have furnished a not unwelcome occasion to British manufacture ers to do a little combining on their own account. At all events, the Imperial Tobacco Company has been formed to construct the machinations of the American trust, and issue has been fairly spined between the belligerents."

The English tobacco "combine" led off with an offer to "set aside £50,000 per annum as a bonus for division among retailers who should sign an agreement to deal in its wares and to eschow those of its American rival":

"Whether by design or by accident, the offer has been a huge success. It has drawn the American trust and developed the consedy of the situation. The trust is evidently overjoyed at the smallness of the offer, and has hastered to show what it can do in the same line. It offers to pay to the retailers by way of obbours the whole of its profits upon asles in this country and to add to that a further sum of \( f x00,000 \) per annum. This splendid evidence of friendship is guaranteed to last four years."

"This sort of thing invigorates one's faith in human nature," proceeds The Times:

"Guida at cost price for four years and a bonus of £800,000 to the struggling British traders." We are almost ashamed to speculate upon what is to happen at the end of the four years. To doubt the persistence of such hobble disinterestances seems almost infidelity. Can any one be guilty of the turpitude of asking whether the £800,000 is in the hands of trastess? Can any one entertain a doubt about the auditing of the manufacturing accounts, or the inclusion of the £200,000 in manufacturing generates. For our part we should prefer to believe that, when the time, the such a science will be alterated for adding to the enrichment of the British retailer the provision of the British consumer with the finise tiggartees in the world at twenty for a penn,"

"The true meaning of this Homeric contest over the body of

Auditard Roch New Zealandt.

THE RIVILRY OF GERMANY AND INCLAND.

Great Belly-Crawling Competition.

—Der Wahre Jakob (Stuttgatt).

Gazette (London) :

"It is clear that the aim of each of the combatants is to gain a complete monopoly of the trade, so that when all rivals are driven off the field the winner may be in a position to regulate the price of tobacco without fear of effective competition. When that result is achieved the man in the street will have to smoke whatever stuff the monopolists choose to give him, and to pay for it whatever price they choose to demand. The warring tobacco Titans do not besitate to expend thousands upon thousands of pounds for a few years, simply because they know that as soon as they gain the mastery they will be able to recoup themselves at the expense of the public. And they must also know that the public, if they think about the matter at all, perfectly understand the maneuvers taking place under their eyes. The net is being spread in the sight of the bird, and the snarers take no trouble to conceal it, for the very simple reason that they know the bird is powerless to resist or to escape. How is it that the consumer, who in theory holds all the trumps, is in point of fact unable to play a card in the game at all? The reason of course is that the tohacco-smokers of the country are utterly without the means of acting in combination, and that without combination it is impossible for them to make their weight felt. It is an example of the irresistible force of organization.

"On the whole, the war seems to have come to a very amusing and edifying deadlock," says The Speaker (London) :

"The two mighty champions, British and American, sat down one on each side of a chessboard with the British retailers for pieces; but as soon as they wanted to begin to play, the pieces said 'We don't like your style of game and you can leave us alone, thanks.' It is really very satisfactory to see that this boycott business is a cock that will not fight in this country. At present the two mighty combatants look extremely foolish.

#### THE FRANCO-RUSSIAN DEFIANCE OF ENGLAND AND JAPAN.

CIGNIFICANT" and "far-reaching" are the terms applied to the declaration in which Russia and France have apprised the world that the Dual Alliauce extends to the Far East as defined by the scope of the Anglo Japanese Alliance. Says the Nation (Berlin), a weekly organ of the Liberal element:

"If Russia and France declare that the observance of the fundamental provisions of the Anglo-Japanese treaty is also a guaranty for their special interests in the Far East, and if in the same declaration they aver that they are equally constrained to con-

A PRESIDENT'S EXCUSES TO HIS MINISTERS

LOUBET: "I assure you, gentlemen, the postponement of the Rossian trip was not my fault. I wrote the Cznr that once the month of April was passed, he ran great risk of never seeing you agaio.

-L'Intransiceant (Paris).

onr Lady Nicotine is ohvious enough," says The St. James's template the possibility of aggressive action by the allied Powers and of new complications in China, there must be small hope in St. Petersburg and Paris that the Anglo-Japanese treaty can safeguard peace in the Far East. Declarations of this import are not made with reference to vague and far-off dangers. They are made only when some threat to immediate interests is within the limit of possibility. The note is therefore a warning to England and Japan."

> The declaration is simply a Franco-Russian retort to the Anglo-Japanese treaty, according to the Conservative Areus Zeitung (Berlin), while French opinion is indicated in this extract from an editorial in the Journal des Débats (Paris) :

> We called attention, on the publication of the text of the [Anglo-]apanese] treaty, to the fact that its avowed object could injure no one, since it was, in appearance at least, merely defensive and a protection to the established order of things. We added, however, that upon pretext of defense and by means of the intervention clause, the contracting Powers could easily assume an offensive attitude. Such seems to be the point of view of the two allied governments of France and Russia,

> It goes without saying that England and Russia can not constitute themselves sole guardians of the existing order in the Orient, says the Temps (Paris): "These two Powers can not presume to be sole judges of when the status que shall be deemed disturbed. To avoid all misunderstanding France and Russia too have 'reserved' the right to defend their interests."

> English opinion is divided, but the possibilities are admitted to be serious. Thus The Daily News (London) :

> "It is exactly as we foretold. The Anglo-Japanese treaty, which seemed at first to create no stir in the world, has now met with its first response. It comes in the form of a semi-official note published in Paris. There is no mistaking the significance of this document. It is a counter-cry of 'check' to the British move

> Somewhat perfunctory and non-committal is the opinion of the London Times, which does, however, say:

> "Russia and France accordingly have thought it better to 'say ditto' to the Anglo-Japanese agreement than to say nothing. They affirm, it is true, at the end of the note, that they also must contemplate the contingency either of aggressive action by third Powers or of fresh disturbances in China which might menace their interests. In either event, the allied governments reserve to themselves the right to take into eventual consideration the means to protect those interests."

Perhaps the summing up by the London Standard is the best of all:

"In presence of the Anglo-Japanese Alliance, Paris and St. Petersburg have thought it expedient to speak. They reply by reminding the world that there exists a compact for mutual aid between France and Russia, and that it extends in full vigor to the affairs of the Western Pacific."-Translations made for THE LITERARY DIGEST.

#### POINTS OF VIEW.

SPAIN'S POSSIBLE DICTATOR. - "For the time being, all the combinations which the despatches from Madrid speak are premature," says the Journal des Debats (Paris). "It is scarcely worth while to keep track of them. There is indeed, in the event of complications, a final solution that may be summed up in a single name-Weyler. But without denying that in the history of nations circumstances arise which are compatible with the concentration of power in one man, it is preferable not to have recourse to such extreme measures until there is no longer any way to avoid them.

IN THE SAME MAIL. The fact that THE LITERARY DIGEST is a journal that aims faithfully and impartially to represent (re-present) the views expressed on all sides of all questions without injecting its own editorial views into any controversies (except as its book reviews seem to require). is generally understood, but not by everybody even yet. As witness the following extracts from letters in the same mail :

"Please find enclosed money order. . . . Why is it that you never my anything sympathetic of the Hoers?

That from Maryland. This from Ontario :

"I very much like THE DIGSET; but it has become so evidently pro-Boer and anti-lititish as to make many of its articles anything but pleasant reading to a British subject."

#### NOTABLE BOOKS OF THE DAY.

#### A GREAT INTERNATIONAL GAME.

THE MASTERY OF THE PACIFIC. By Archibald R. Colquboun, author of "China in Transformation," "The 'Overland' to China," etc.; formerly Deputy Commissioner in Burma; Administrator of Mashonaland. South Africa: Special Correspondent of The Times in the Far Rast, etc. Cloth, 6% x ok inches, 440 pp. Price, \$4.00 net. The Macmillan Company. New York

"HE author of "China in Transformation," who made himself heard with the deference due to a sacracione observer and states. manlike student of "foreign affairs," here deals with the portentous shiftings of human interests, activities, and rivalries which are transforming the great ocean zone of the Pacific. In more than one

ARCHIBALD R. COLOUROUN.

sense that "waste of waters" can no longer rejoice in the fitness of the name bestowed upon it by its earliest discoverer, when it was free from the entanglements of modern competitions and policies-as when "stout Cortez, with eagle eves, stared at the Pacific : and all his men

Looked at each other with a wild our Silent upon a peak in Darien."

Young Powers have arisen, barriers have been broken down, and the great flood has become "an arena for the ambitions of the nations and a highway for international commerce," a keen conflict of interests. wherein the great Powers shall meet with an eager clash of diplomacies and formidable resources, that must determine the status and the pretensions of more than one of them.

The anthor has visited all the principal Islands; and in a recent journey has charged himself with the great task of ascertaining the conditions and possibilities of that vast and diversified region, and of gaging the pretentions of the Powers presently interested-Great Britain and Holland, the United States and Japan; and prophetically of Germany and France, Russia and China.

The beginning of the nineteenth century witnessed the first stir of activities in exploring the coasts of Australia and New Zealand-the story of which, as Mr. Colouboun tells it, conducts the reader to a conclusion so significant, so fraught with possibilities of new alliances, new potencies of empire, that he is prepared for the prophetic import of the author's argument : as when he says :

"On the possibilities of this newest of continents [Australia] depends very largely the future of the Pesich Geena; and indeed, as the writer hopes to show, the forthcoming struggle will argely take its color from the developments in the United States of America and the Federal nonneed character. A hundred—nay, fifty years ago—such a condition of aftars would have seemed beyond the region of possibility.

In the American undertaking and partial performance in the Philippines, the author finds " a problem such as has never confronted Great Britain, or any other colonizing Power; because the conditions are complicated by the presence of a mixed race who can neither be treated as 'natives' nur as Americans

The evil traditions of three centuries, he declares, hang over the islands-traditions of corrupt government; and the task is rendered doubly difficult by the necessity of pulling down the edifice before building it up again. But he finds that, "with characteristic self-confidence. ' the Americans "are practically setting on one side the accumulated experience of other colonizing nations, and have resolved to meet these new problems with an entirely novel experiment "-concerning which Mr. Colquhoun expresses his reasonable misgivings in terms of manly criticism tempered by good-will.

In conclusion, the author finds in the newness of the chief factors in the Pacific problem a remarkable feature. "The young republic of the States," he reminds us, "is little more than two centuries younger than the young autocracy of Russia; the regenerated Japan is only a little younger than the commonwealth of Australia, whose birth is of yesterday. The naval development of the United States and Japan will, he predicts, be the earliest outcome of the situation; "and other Powers, hitherto regarded as chiefly military, are already straining in the same direction." But this inevitable precaution, he maintains, does not necessarily point to an ambition of forcible domination, but rather to the maintenance of commercial rights, the control of communications, and the dietation of favorable policies.

"The dominant factor in the mastery of the Pacific will be the United States": such is the unqualified conclusion of this wellequipped observer. There can be no rest, no pause, in the march of a great empire, he declares. "It must advance or recede-history has made that plain.

Special maps, forty full-page illustrations in half-tone, and one hundred drawings, add their charm of elucidation and significance to the text.

#### A MATTER-OF-FACT AUTHOR IN A ROMAN-TIC COUNTRY.

A ROWAY MYSTERY. By Richard Regot. Cloth, sky a mohes, see pp. Price, \$1.50. John Lane, New York

"NIS is a story of modern Italian life by an English suthor of some reputation. It is a pleasure to be able to say at the outset that it is a novel, and not an adventure story or a melodrama under the serone name

The herome of the book is an English Roman Catholic lady, who marries a Roman prince; the material of the story is made up out of two themes, the opposition of the

two parties-the Bianchi and the A'cri-who divide Roman society, and a terrible form of hereditary insanity which afflicts the family of which the heroine becomes a meniber. As to the first theme, we are told by the publishers that Mr. Bagot depicts remorselessly the truth about the Roman Catholic Church in Rome. It seems to us, however, that the whole situation with which he deals-the petty intrigues of the parties favoring or opposing the temporal dominion of the Papacy-is one of no interest whatever, and not worth the depict-

The greater part of the story, fortunately, has to do with the more important matter. The Roman prince has, unknown to himself, au

RICHARD WAGOT

insane elder brother, whom his mother conceals. The developments which grow out of this situation are well set forth, with one important reservation. Mr. Bagot will leave nothing to the reader's imagination, he will not allow that a reader may have a mind. He has written a book of 350 closely printed pages which might be cut down to 200 without any one's noticing the difference. Every development of the plot is elaborately explained, you are not allowed the pleasure of inferring anything. At each stage of the story the author expatiates by the paragraph, often repeating himself in a most offensively tedions man-The diffuseness which characterizes every scene can not be called "padding," because the work is both sincere and dignified; the trouble seems to be the matter-of-fact nature of the author's own mind. His story can be comprehended entirely by reading the first sentence of each paragraph.

Mr. Bagot appears to have a satisfactory knowledge of Italian life, tho he portrays nothing very striking, and does not display either great breadth or depth. He has scattered through his pages the necessary number of Si signeres and Cara mias, etc., and has spelled them correctly, more than one can always say.

#### LOVE AND THE VENDETTA.

THE CLOSTFRING OF URSULA. By Clinton Scollard. Illustrated by Harry C. Edwards. Cinth, 3x71/2 inches, 273 pp. Price, \$1.50 net. 1. C. Page & Co., Boston.

"HE qualities of a fine style, which mark Mr. Scollard's work in prose or poetry, may all be noticed in this story of a remote period, which seeks to revivify the social aspects of an Italian life long past. The precise date is not given, but color and atmosphere alike seem to place it somewhere between the dissolving gloom of medieval days and the sunrise of the Renaissance. The hereditary foud between two noble houses furnishes the theme. After ages of ancestral slaughter on both sides, the Nerl have made overtures to the Uccelli, and to the marvel of all citizens of their respective towns, over whose destinies they dispute as masters-a marriage has been arranged between Grifone, eldest son of the Uccelli, and Fiammetta, daughter of the Neri, and the clans of both houses are invited to the Neri palace to celebrate the betrothal.

In telling his story, Mr. Scollard has resorted to a device that has done much duty during the present revival of historic romance, He makes Andrea Degli Uccelli, youngest son of his house, and its only surviving male, write down for the benefit of his descendants the scenes of that night, together with his subsequent adventures. This method, the somewhat hackneyed, affords Mr. Scollard the more scope for his own poetic diction and turn of thought, since Andrea was reputed both poet and artist in his own day. It was as a poet no less than as the youngest son that Andrea was left out of the family councils in the matter of this fateful betrothal, and it was his poetic instincts, too,

CHARLES SCOUL AND Courtery of Pittsburg Gazette.

only protector, Andrea, by a miracla of alertness, finds egress through an unobserved door, dodges pursuers, gropes his way to the apper region of the palace, and, aided by a light glimmering from under a door, is admitted by a damsei who seems less a human being than a vision. Petitioning ber in the name of Heaven, she aids his escape from the roof by means of an

improvised rope, which she berself holds while Ugolino Neri seeks admittance. This damsel is Ursula Allegreati, an ophan heirers, over whom the Neri was made joint guardian with the bishop of her native tuwn, and whom he boped to see become sented to halt at his house on her way to a favorite convent in whose sented to halt at his house on her way to a favorite convent in whose sanettary she preferred to seek safety from the terrors of the time. This made no becomes the start of Aidrea's Jile, and the story turns on

the question whether he or the closter will win her. As an excellent the questions whether no or the counter was win an arr. As an excellent picture of a time when might was right, no less than as a piece of ex-cellent literary workmanship, the story is to be commended. The reader is not likely to nap over its pages.

#### THE RECRUDESCENCE OF MR. HOLMES.

THE HOUND OF THE BASKERVILLES. By A. Conan Doyle. Cloth 5 x 7% inches, 248 pp. Price, \$1 30. McClure, Phillips & Co., New York

THERE are comparatively few characters in books who gain recognition from more than one or two strata of the reading public. There are books that sell by the ten thousand every year that are advertised but little, that are never reviewed, and of which we never hear. The historical novel has done a good deal to bring the various classes of readers down to a common denominator. From

A. CONAN DOYLE

princes, fair ladies, and adventures, it is not a very far cry to the stories of Bertha Clay, or to the doings of the personages in a dime novel. Every now and then, however, there is a character created sufficiently exaggerated and sufficiently versatile to appeal to readers of every sort. One of these characters is Mr. Sherlock Dolmes. His name has become a by-word and his adventures have been read by almost every class of the reading public. Whether Mr. Conan Doyle shelved his hero in good faith, meaning to have done with childish things, or whether Mr. Sherlock Holmes went into retirement as a matter of policy, while the public appetite was being whetted for more detective stories, we do not know

At any rate, here he is again : his friends will welcome him, but there will be undoubtedly some grum-blers and ungrateful persons who will say that Mr. Hodmes is not quite at such great pains to entertain his public as he was formerly, and others desirous of showing their eleverness will say that they guessed the secret of the Baskervilles quite early in the book.

the secret of the Baskervilles quite early in the book. But this is not the pipt in which to approach a Sherlock Holmes But this is not the pipt in which to approach a Sherlock Holmes We should always be overwhelmed at each new proof of the great detective's amazing powers, and as for topoping to reason out any given to the proof of the great detective's amazing powers, and as for topoping to reason out any given guessing a conundrum would. The only way to road any detective sory in to be carried along on the stream of events, and the detective to the proof of the proof of the stream of the proof of the proof of the proof of the stream of events, and the detective Newton to the proof of the stream of events and the detective Newton and the proof of the stream of events, and the detective Newton and the proof of the stream of events and the detective Newton and the stream of events an

whether readers with thee," In a found of the basservines," will reduce the cettle story is not a form of literature over which it is possible to arouse a discussion, any more than it would be possible to argue over eagerness the "deventures of Shericke Holmes" will read "The Hound of the Baskervines" will read a "The Hound of the Baskervines" with eagerness, and if some of us fail to range over a start of the start o lost his cunning.

#### A STORY OF LOGGING-CAMPS

THE BLAZED TRAIL. By Stewart Edward White. Cloth, 3% x 8 inches,

"HE author of "The Blazed Trail" has chosen a picturesque atmosphere for his story. He knows the life he is writing about, and he knows how to tell a good story. It is, in fact, rather

hard to be judicial in the presence of a book like this a story of the kind that is being awaited by those critics who are most earnestly interested in American literature. It is a vigorous narrative of a dramatic phase of American life, a book dealing with strong contrasts, as strong as life and death, and yet, in a literary view at least, in no way overwrought; a story in which the development of the main character, and indeed of some of the subordinate characters is unobtrusively indicated. The main character is not very complex One might cavil at the opportuneness of the aid which comes to the hero at the exact second when it is needed : and might feel shocked at the apparent sanction of the author to the murder and scalping of a modern villain in the midst of a community not altogether barbarous. The book how

STAWARD SOWARD WHITE

ever, was evidently not written to please lovers of still life. It is a record of outdoor life, of life in the logging-camps along Lake Superecord of outdood life, of life in the logging-camps along lake Superior, a story of the fight of men with nature. An analyse of the book shows that the author carries the neto from his first experience as a owner of a great logging-camp. When he has finished the book, the reader knows as much about the preparations of a log for the sawnill the properties of the superior of the subject in the contract of the co

means neglected the poetic forest-setting of his drama of logging-life.

#### CHILDREN'S STORIES FOR GROWN-UPS.

THE MADNESS OF PHILLIP. By Josephine Dodge Daskam. Boards, 34 x 8 inches, 273 pp. Price, \$1.50. McClure, Phillips & Co., New York. HERE is no new phase of civilization that is not reflected in litera-

ture. Interest in sociological conditions and genume self-consciousness bred the problem novel; great industrial activity, the sociological novel; and the evolution of the child from a subordinate place in family life to the powerful position it now occupies, has given

POSEPHINE DODGE DASKAM

birth to a class of books that are altogether delightful, the stories about children that are written for grown-ups. Occasionally in pastime some great author would write a sketch of a child altogether delightful, but until recently the children of fiction have been monotonous, and were used for purposes of pathos, or to serve in some way to round out the anthor's plot. The writers of the present moment apparently remember their own childhoods to more purpose, for they certainly have a greater insight into the working of the minds of children than had our forefathers.

The latest of such books is Miss Iosephine Dodge Daskam's "The Madness of Phillip." Miss Daskam is not a sentimentalist, and her stories abound with real children. They are for older people and are extremely amusing. There is a certain satirical vein running through several of them that is most refreshing ;

in fact, in these stories Miss Daskam is at her best. "The Madness of Phillip," the title of the first story, which is a take-off of kindergarten methods, and "Ardelia in Arcady," whose heroine is taken against her will to the country, are perhaps two of the best, altho "The Little God and Dickey "is delightful. Miss Daskam is a young writer and her work shows it by its unevenness. "Edgar, the Choir Boy Uncelestial," for instance, is a little forced, and in one case the author has vicious."

for instance, is a little forered, and in one case the author has viciously Miss Isakain is sometime of an isomeclast. The college settlement and the kindergrafen have been supposed to bring only unimized good, and the college settlement is sufficient to be supposed to bring only unimized good, as many satures. Not that the stories read as the they were written for the purpose of ridicalling settlement or kindergrafen, for the author's only what she had observed. It always they are the bad uniply set down.

## Men

In every walk of life should have a keen interest in their physical welfare.

After showage hiral of The stone Method Particularly should Lawyers, Doctors, to Bankers, Ciergrawe, frectators, Merchants and those who what better hangs, having after their physical being. The minutes each day devoted to intelligent, systemic, and present the physical being created and the stone of substantial candidates and the stone of substantial candidates and the substantial candidates and the substantial candidates and the substantial candidates are constrainted by the substantial candidates and the substantial candidates are constrainted by the substantial candidates are constrainted by the substantial candidates. The substantial candidates are constrainted by the substantial candi atic, persistent exercise will actually add years to one's life—a benefit which can hardly be measured in dollars and cents. We are successfully teaching The Stone Method of Scientific Physical Culture to men and women in every part of the world. It requires only to minutes time each day, in your own room, just before retiring, or upon arising. No apparatus whatever is required, and there is no expense aside from our modest fee. Individual instruction is given in every case.

Conscientiously and systematically fol-

low our instructions and we can promise

Is it you, O my comrade, who laughed at my

jest?
But you wept when I told you I longed to be free.
And you monned for a while when they laid

me at rest.

I've been dead all these years! and to-night in

your heart
There's a stir of emotion, a vision that slips -It's my face in the moonlight that gives you a

start, It's my name that in joy rushes up to your lips:

Yes, I'm young, oh so young, and so little I know! A mere child that is learning to walk and to rin; While I grasp at the shadows that wave to and fro I am dazzled a bit by the light of the sun.

I am learning the leason, I try to grow wise, But at night I am baffled and worn by the strife; I am humbled, and then there's an impulse to rise, And a voice whispers, "Onward and win! This is Life!"

And the Force that is drawing me up to the Height.

That inspires me and thrills me-each day a new

birth.

In the Force that to Chans said, "Let there be Light!"

Light!"

And it gave us sweet glimpses of Heaven on Earth.

#### PERSONALS.

The Founder of the Red Cross Society.-The Royal Academy of Sweden has awarded Henri Dunant, founder of the Red Cross Society, a sum of 104,000 francs. This sum was one of the Nobel prizes to be awarded to those who have rendered the greatest services to humanity. The Magazin Fittoresque gives the following sketch of M. Dunant and his work :

M. Henri Dunant was born in Geneva the 8th of May, 1828. He was of French ancestry, his family having sought refuge in Geneva at the time of the religious persecutions following the Reformation. From his youth he had been interested in charitable works. Before devoting himself to those ounded in war, he devoted himself to the poor, the disinherited, the oppressed. Already his mind was occupied with questions of universal harmony and fraternity among nations as well as among todividuals: bis broad and becevolent spirit alendy soared above distinctions of race

It was upon the battle-field of Solferino and in the charpel-house of Castiglione that the idea of the Red Cross Society germinated. At Sollerino n 1850, Donant was the sad witness of the sufferogs which the wounded endured, while lying for days upon the ground deprived of all succor. Aided by a few high-souled women, he organised a corps of relief in the little town of Castiglione, binding up the wounds of the men with his own hands, working indefatigably among these men devoured with fever and suffering all kinds of

"The gentleman in white," as Dunant was called by the wounded, because on account of the heat he was cied in white imen, carried away with him from these scenes of desolation the thought that devoted volunteers, skilled in the management of litters and possessing some knowledge of nursing, well organised and disciplined, and enjoying likew se with the hospitals and supplies an absolute neutrality, might be of inestimable service in the wars of the luture. Dunant believed that this result might be accomplished if the various nations would adopt the same signal of recognizance, a sacred standard that should insure absolute immunity to all those beneath its folds. Such is the origin of the white fing with the red cross, to-day dopted by simost all civilised countries. The blood of the wounded at Sofferino caused to germinate the seeds of pity and generosity.

Upon his return to Geneva, Donant wrote a Sonvenir of Solferino," in which he laid bare all the borrors of war. The book made an immenae sensation, and was immediately translated into several different languages. If he had his detractors, he had on the other hand warm delenders. The French Minister of War at this time, M. Randon, did not hide his bostility to Dunant, and cried: "What business have these civilians to meddle with what does not concern them?" But MacMahon, Leborni, and Canrobert, and later Napoleon ranged themselves on the side of Dnnant, and Victor Hugo wrote to the anthor of Solferino: "You are enlisting humanity and serving the cause of liberty. I applaud your noble efforts." And General Trochu said: "All that Dunant says is perfectly true; he has even understated the truth." These were precious encour-agements when the violent opposition of Marshal Kandon came near compromising the ancress of his work in France. "In other countries Donant found from the be-

ginning the most favorable reception. Sovereigns nod people equally responded to the appeal made by the philanthropist upon universal charity."

in October, 1862, the conference of Geneva was called. This was followed in August, 1864 by s congress which met in the Hôtel de Ville of Geneva, at which the "Convention for the amelioration

#### Problem Composition.

The B. C. M. (March) publishes an extract from a letter by A. P. Mackenzis to the Chess-editor of The Canterbury Times, in which he refers to the fact that he is generally considered to be handscapped in problem-composition on account of loss of sight. Mr. Mackenzie is not sure of this, and continues:

"I have lately come to think that problem composition is peculiarly a mental work, and that employment of board and men is in many ways a nuisance. It cramps the imaginative faculties. Certainly the three-movers I have composed since I lost my sight are infinitely superior, as a whole, to those composed before. Then see what fine work Lane is turning out, and he is a comparative beginner. He, however, I understand, usee a board and men especially made for him. I work by mental efforts only, and never maks any record whatever of my work. The only time it is placed on diagrams is when my brother prepares the problems for transmission. I am sorry to say, and you will doubtless be surprised to learn, that I have no record whatever of a single problem composed since I lost my sight,"

## HOW THEY MANAGE.

Doctors' Wives Trained to Arrange Things.

Sometimes the wife of a doctor can bring her huband around when he don't know exactly how to help himself. The wife of a certain well-known physician in Washington, D. Comoladd that coffee was the cause of the doctor's sleepless nights. She aays, "If thought perhaps he was nervous from the coffee which he drank at his meals and suggested that he try Postum. To my sarprise he objected most decidedly. I said nothing but the next morning made Postum Coffee instead of the regular croffee and gas that to the doctor. I made it according to directions and it had a besulful coffee color and fixer. If le drank his cup and remarked that the coffee was unwaulty good that morning and advector morning and remarked that the coffee was unwaulty good that morning and advector morning and self-or more.

From that time I served him Postum at every meal, and in the course of a week or two he showed such remarkable signs of improvement in health and strength that I told him he had been drinking Postum from the time he had begun to get better.

You never saw such a surprised man. He said, Well, if the good coffee! have had is Postum, and leaving off regular coffee has made such a change in my health, I never want any other kind in my house. Since then he regularly prescribes Postum to many of his patients and with good results." Name given by Postum Co, Battle Creek, Mich.

# New Table Linens

at "The Linen Store."

Most prominent among the new designs are those suitable for round tables which are now so popular. We supply these cloths either entirely round, or in the usual square shape with the center part of the design adapted to fit the round table.

The prevailing fashion is to have the center of plain satin damask, with an artistic scroll or floral border around the table a few inches from the edge and a hanging border to match.

The sizes in these cloths are 2, 2\frac{1}{2}, 2\frac{1}{2}, 3, 3\frac{1}{2}, and 4 yards in diameter, or square, and prices range from \$4.50 to \$72.50.

Prices range from \$4.50 to \$72.50.
Besides these we show our usual very large and select
assortment of designs in cloths for oblong and square
tables, in all widths, from 2 to 5 yards, and in all
lengths, from 2 to 8 yards.

Mail orders have prompt attention.

James McCutcheon & Co.,

# Rheumatism

A writer in THE LANCET, (London, Eng.), says:

"Tartarithine has given results superior to any preparation which I have tried. The promptness of its action is in many cases autonishing. The use of the preparation has sufficed in all cases so far treated to our disorder."

MISCELLANEOUS:

# RECENT STANDARD FICTION

# Heralds of Empire

By A. C. LAUT, Author of "Lords of the North," 12mo, Cloth, \$1,50,

A story that tells of the days of Charles II., of the refugees of Boston Town, of Puritanism and Witchcraft, and of Radisson, that picturesque adventurer who juggled empires and who changed allegiance as readily as he would change his coat. There is a tender love romance running through the tale that reaches a satisfactory conclusion,

# Deep-Sea Plunderings

By FRANK T. BULLEN, Author of "The Cruise of the Cachalot," "The Apostles of the Southeast," etc. Illustrated. 12mo, Cloth, \$1,50,

Mr. Bullen, who has proved himself a past master of deepwater literature, affords in these pages a series of brilliant and often dramatic pictures of the sailor's life and adventures.

# A Damsel or Two

By F. FRANKFORT MOORE, Author of "The Jessamy Bride," " A Nest of Linnets," etc. 12mo, Cloth, \$1.50,

An officer and a gentleman and a Napoleon of finance are two of the types contrasted in Mr. Moore's interesting story of modern London, suggesting some of the "promotions" and consequent entanglements of recent years, involving a tale of loyal friendship and love.

## The Outlaws

By Le Roy Armstrong. 12mo. Cloth, \$1,23,

A vigorous, red-blooded story which shows the romance and stern reality involved in the building of the Middle West. The author pictures the quant life of the early settlers in Indiana seventy years ago, and he turnshes vivid glimpses of journeys by canal, the raids of outlaws, the amusing house-raisings of the settlers, and a race with death when the cholera came, before the great canal was finished.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

#### TOPICS OF THE DAY.

# THE DUTY ON MEAT AND THE DUTY OF CONGRESS.

A LONG with the sentiment within the Republican party in favor of cutting the tariff on other "trust" products, such as steel and sagar, there is a growing feeling that the tariff on meat should be cut, to relieve the present high prices. It scarcely need be said that the Democratic papers favor a change in the tariff. The New York American and Journal has an editorial fifteen inches wide and thirteen luckes deep on the subject, in five different styles of type, in which it says, in letters half an inch tall, "Take the Tariff Duties off MEAT!" A Democratic prepensative has introduced a hill to abolish all duties on meat or poultry imported from foreign countries, but it is said that it may be shedved in committee on account of its source.

The New York Mail and Express (Rep.) warms the packers that if they continue to "monopolies meat products and make them more dear," it may become "impossible to defend the retention of the protective duties on meat." The Brooklyn Standard Union (Rep.), too, declares that "the obvious remedy" for the advance in prices "is to increase the supply by bringing in Canadian or other foreign cattle," and it adds: "The prohibitive tariff, however, bars the way. Should it not be immediately removed?" The Kansas City fournal, a strugyly Republican paper published in a city that rivals Chicago as a meat-packing center, declares.

"The cattlemen are thriving too hig'ally at the expense of the whole people. What is needed, and needed urgently, is rolled for the millions who are forced to pay extravagant prices for one of the necessities of life. Congress should throw down the protection bars and permit the ingress of the cattle of Mexico, of Canada, and of other convenient countries. This would not do away with the present trouble, but it would belly. The way to meet a condition of scarcity is to open all available sources of sapply.

"If Congress will suspend the tariff provisions which now effectually har out Mexican and other foreign cattle and sheep, and the Administration will push the fight against the best frust with all expedition, the outlook for the consmer will not large remain so dark as it is now. Mr. Cudahy's admissions that prices are higher than they have been before in twenty-five years st ... the entire reasonableuess of demanding that everything possible be done toward relieving the situation."

The Philadelphia Ledger, another Republican paper, expresses a like view, and the Boston Transcript (Rep.) says:

"Letting down the tariff bars that shut out the cattle to the north and sonth of us would soon provide an alundance of meat as good doubtless as what we are getting from the West now. Protection is all right in its way, but when, as in the case of some other trusts, the beef combine persist in capturing and holding foreign markets at the expense of the home consumers and appeal to the patriotic impulses of the American people as exemplified in the policy of exclusion to keep the tariff intact, it is time to cease shamming and to take the bull by the horas tho it may wrench the feelings of some well-intentioned advecates of the Chinese wall and cause a spasm of indignation within the circles of the 10m Market Chi.

Tariff revision is condemned as dangerous, however, by other Republic nn papers. The St. Louis Globe-Democrat (Rep.) would not alter the Disgley law "in any particular," for it believes that "nothing is more certain than the tendency of any tariff tinkering to involve the whole tariff. "The New York Times (Ind.), while not objecting to tariff reductions, believes, however, that in this case the reduction would be useless. It observes:

"To repeal the tariff (probably meaning the duty) on beef would render further oppressive combinations between the stock raisers and the packers impossible. Shiploads of English and continental beef-rich, juicy, and generally palatable, not to say nutritious-would at once come this way. There are at least a hundred cows in the Bermudas lowing for the American hutcher, certainly half as many in the West Indies, and of a sprety some in Canada, which will not be happy until embalmed for the American market. Put beef on the free list and the march of food cattle to this country would recall the days when the buffalo roamed the Western plains in herds covering many square miles. Some statistical uncertainty may exist as to where the imported beef would come from, but Tammany is not statistical, and its committee very properly leaves to such as have a taste for figures the solution of the problem. Ex-Sagamore Nagle might have helped them, as he is a great statistician; but really it was not worth while to incumber the report with tedious details.

"To repeal the daty on meats is eminently proper and desirable, but the reason for so doing is not that it would afford any relief to the momentary situation. It is a nucleus duty, yielding no revenue and valueless even for the vicious purpose of protection."

Meanwhile the query as to whether there is really a beef trust is receiving continued attention. The Attorney-General has directed two of his assistants to look into the matter, and says;

"From their reports, I am satisfied that sufficient evidence is in hand upon which bills in equity for an injunction can be framed to restrain the combination mentioned from further proceeding under their agreements, which clearly appear to be in restraint of interstate trade. I have, therefore, in compliance with the law that provides: 'It hall be the duty of the several district attorneys of the United States in their respective districts, on the direction of the Attorney General, to institute proceedings in equity to prevent and restrain violations of this set,' injunction against the corporations and persons who are parties to the combination mentioned, to be filed in the United States circuit court for the norther of states it will be under the states of the combination mentioned, to be filed in the United States circuit court for the norther of states; of Illinois.'

#### SUGAR TRUST AND SUGAR TARIFF.

T will not be a had idea, while relieving the people of Cuba with reciprocity, to relieve the people of this country with a cut in the sugar tariff that will bring down the retail pricesuch is the view a considerable number of newspapers are expressing in their comment on the Cuban reciprocity bill and the Morris amendment, now before the Senate. The Morris amendment provides for the abolition of the differential tariff on refined sugar, and its presence on the bill is due to a combination of Democratic and beet-sugar Republican voters, not one of whom, many papers believe, really expect that it will become law. The Democrats, it is pretty generally thought, voted for it to put the Republican party in a dilemma, and the "beet Republicans" voted for it in the idea that it would kill the reciprocity bill. But the Philadelphia Ledger, the Buffalo Express, and a number of other Republican papers, especially those in the West, are urging the Senate to indorse the cut in the sugar tariff. The people "have paid tribute to the sugar trust a long time," says the Des Moines News, "and will be immensely pleased to have the Senate pass the Morris amendment." The Minneapolis Journal (Rep.) says:

"The Senate will be wise if it quietly accepts the house bill, only amending it to increase the reduction of the sngar duty so as to give Cuba not less than 35% per cent. off regular duties, and 50 per cent., if its liberality can be stretched that far, for 50 per cent. might do some good. To wrangle over yielding any-thing and resisting any reduction in the height of the tariff will is not very creditable to the statesmen so contending. They take not thought whatever of the absolute equivalent we shall get in Chban trade. Isseed of limiting the arrangement with Cuba in Chban trade. Isseed of limiting the arrangement with Cuba least five vent."

"The American people would rejuice," declares the Chicago News (Ind.), "if the sugar refiners' trust incidentally were deprived of the power to secure extortionate profits from the American consumer," and the Chicago Tribune (Rep.) says that "if Congress were to do nothing else than to order the sugar trust to the rear, it would live in the memory of all men forever." The Chicago Record-Iterath (Ind. Rep.) says that such a result

10-SIGN FOR NEW BEEF EXTRACT LABEL,
- The Philadelphia North American

"is what the people have been longing for and praying for, but scarcely hoping for," and adds:

"There is no need to waste any sympathy on the sugar trust. It possesses all the facilities, processes, and machinery to refine sugar cheaper than it can be done anywhere else on earth. It has never paid a cent higher wages because of the differential of i cent a pound in its favor, but has simply divided the \$0,000,-000 or \$0,000,000 permium annug its promoters. Moreover, the oper cent. reduction on the duty on raw sugar from Cuba will the proof of the cent a pound of the European refiner, while the proof of a cent a pound only the European refiner, while the proof of a cent a pound of the European refiner, while the proof of the cent a pound of the European refiner, while the proof of the third of the European refiner, while the proof of the third of the European refiner, while the proof of the third of the European refiner, while the proof of the third of the European refiner, while the proof of the third of the

"Viewed from an impartial economic point of view, irrespective of its effect on politics and political parties, the House reciprocity bill should be entirely satisfactory to the American people, who may be forgiven if they rather only the spectacle of the best combine hoist by its own petard while assisting in squeezing 86,000,000 to 88,000,000 to 18,000,000 to 18

trust into the coffee-cups of the republic.

"The Senate should complete the good work begun by the House."

But even if we are to have tariff revision along anti-trues lines, the place to begin the movement is not by an amendment to a Cuban reciprocity bill, so a good many papers think. "The wise thing for the Senate to do," in the opinion of the Boston fournaf (Rep.), "is to prepare and bring forward a reciprocity proposition of its own, starting from the beginning and granting Cuba a concession of more than a meager so per cent. This will have the support of a very great and earnest public sentiment. It will be a clear-cut, intelligible measure." So, too, thinks the New York Commercial Advertises (Rep.); and the New York Mail and Express (Rep.) asys.

"To alolish the differential on refined sugar from all sources would undoubtedly do harm to our refining interests, and would have the beet-sugar producers most, especially if, as is claimed, the countervailing duty upon bounty-ded foreign sugar would go with it, while it would add somewhat to the relief of the Cuban planters by enabling them to send a higher grade of sugar to our markets. But it is not worth while now to discuss this aspect of the matter, because it is simply a tariff question relating to our general policy, and is not germane to the purpose of the measure total than been made in that body by shiping that the produce of the control of the c

The New Orleans Picayune (Dem.) and Times-Democrat

IT HITS BOTH WAYS.

-The Cleveland Plain Desler.

(Dem.), devoted to the cane-sugar interests of Louisiana, are firm in the hope and belief that the addition of the amendment has killed the reciprocity movement. The latter paper says: "Cuban reciprocity has run its course. It has been beaten because it deserved to be beaten. Conceived in madness and sursed in hypocrisy, it was but natural that it would meet with an unhappy end. Its passing will awaken lamentations only among stockholders in the sugar trust and stock-jobbers in Cuba."

# EFFECT OF THE STEAMSHIP TRUST ON THE SUBSIDY ENTERPRISE.

E ITHER the new steamship consolidation destroys the last argument for the subsidy bill now before Congress, or it supplies the very best reason why it should be passed—it all de-

pends upon which class of newspapers one credits. The Philadelphia Inquirer (Rep.) points out that the new combination does not increase the number of ships flying the stars and stripes by a single vessel, hence the need of such a measure as the subsidy bill to increase the American merchant marine is as urgent as ever. The trust ficet itself, managed by American capitalists, will sail mostly under foreign flags, and can be turned against us in war time, says the New York Mail and Express (Rep.), a situation which it declares "unendurable," and one which "can not be permitted to continue." The ship-owners, inside the trust and out of it, adds the same paper, should therefore be encouraged by government aid to construct ships "under American control and subject to American jurisdiction, which will give us a carrying trade that

will make our commerce safe in time of war as well as of peace." The Brooklyn *Times* would use the subsidy measure as a weapon to fight the new "combine." It says:

"It the people of the United States are alive to their own interexts, the consummation of this great international trust should create a strong popular demand for the speedy enactment of the shipping arbaidy bill. The formation of this streendous trust makes it more difficult than it ever was before to establish competing American lines of steamslips. . . The only way in which competition can be fostered and made effective is by the enactment of such a measure as the Pype bill, amended so as to provide that any line receiving a subsidy from the Government any combination or traffic arrangement with competing lines. If the enactment of such a measure was expedient and desirable before, it becomes alsolutely necessary now, if the commerce of the world is not to be held at the mercy of this gigantic contination. It is not now merely a matter of pride and of sound policy that the maritime interests of the United States should be protected and promoted; it is now a matter that concern is rectly the most vital interests of the whole American people and of American commerce."

But the new trust includes the International Navigation Company, and the favorite argument against the bill has been all along that that company would get a large silice of the shisidy. Under the new arrangement the subsidy on the steamers of the International Navigation Company would go into the trust treasury and benefit all the shareholders, so that "some of the money thus taken from our people," in the opinion of the Indianapolis New (Ind.), "would go to foreign stockholders of the trust." But the idea that money from the national Treasury should be paid to a trust at all is thought so objectionable by many pagers.

that the formation of the trust is regarded by the Minneapolis Journal (Rep.) as "a finishing touch for the obsequies of the subsidy bill." And the Philadelphia Times (Ind.) says: "What little chance there was for this ill-starred bill seems now to have disaupeared. The American people will never agree that public money shall be donated to a trust. A business which is profitable enough to be made the subject of a stockjobbing operation by Mr. Morgan is a grotesque candidate for subsidies " So, too, think the Boston Herald (Ind.), the Springfield Republican (lud.), the Philadelphia Record (Ind.), the Cleveland Leader (Ren.), the Chicago Inter Ocean (Rep.), and many other papers. The Chicago Tribune (Rep.) declares: "The proper sequel to the proclamation of the transatlantic freight combine will be the immediate rejection

The Chicago Tribune (Rep.) declares: "The proper sequel to the proclamation of the transatianties freight combine will be the immediate rejection by the House of Representatives of the Senate ship-subsidy bill. Deferring action on it will not do. Alleged 'shelving it' will not do. It can not be locked us in a foster ussess and unbeard of until after the fall

should be now, and the House of Representatives abould be the executioner."

Woman's View of "One Man, One Vote."—While the American daily papers are sympathizing with the poor Belgian workingman who does not get his full share of the suffrage, The Women's Journal (Boson) rises to remark that there are

ciection, to be decapitated then, perhaps. The day of execution

"Belglum is on the verge of civil war over the question of 'one man, one vote.' At present, one man is often allowed to cast

others, It (or she) says:

several votes, in virtue of various qualifications, with the result that a minority of the men elect a majority of the legislature, as in Connecticut. In Alabama and Virginia, election officers are perjuring themselves in order to admit ignorant white men to the ballot-box while excluding ignorant negroes. The Outlook and other Northern papers denounce the injustice that is being done in the South, and declare that the ballot should follow' the line of good citizenship, not the line of race'; yet they believe that the ballot should follow not the line of good citizenship, but the line of sex. Alabama and Virgiuia are indignant with Connecticut, and the men of the country towns in Connecticut are indignant with the Clericals of Belgium. Meanwhile women at the North and the South, in Belginm and in Connecticut, have good reason to feel a mixture of amusement and wrath at the way in which the just claim of women to the ballot is ignored by many of the men who are most clamorous in regard to the 'sacred right of suffrage' for their own sex.

" Millions of throats will bawl for civil rights,

"But the women's turn will come."

# PRESIDENT ROOSEVELT AS A PARTY

WHEN Mr. Roosevelt became President, there was considerable speculation as to his qualifications as a party leader. Now, looking over his record that far, the editor of Tw World's Work concludes that he is a better leader than some of the veteran organization managers, and that the present conditions point to his nomination and election in the next Presidential campaign. Says Tw. World's Work.

"Mr. Roosevelt stands for the best tendencies of his partyfor reciprosity, for instance, against stupidity; for justice and hamanity to Cuha as against the very madness of special protection; for civil-service reform; for merit and efficiency in the army and the navy as against favoritism and bureancray; for the enforcement of the laws (the Sherman anti-turat law, for instance); and most of all for vigor and courage in the public service.

"The President gives promise of winning great popularity on his own account by reason of the evry party difficulties that he is encountering. For there is a likelihood of a struggle sooner or later between him and the great corporate interests that have found the atmosphere of the Senate and of the Republican party in general an acquiescent and balmy air. Deep-seated in Mr. Roosevelt's mind is the feeling that fair play is as desirable when great interests come into the game as when the players are little men and the stakes are small. He insisted while he was governor of New York that public franchises should not escape taxation. Certain great interests preferred that he should not be governor again. Therefore by an unexpected turn of fate he became President. He still tespes the feeling that great interests should have no favors that plain men may not have. He said this is not form in an address at Minnespols, that has been still the still t

We are further informed by the same writer that the President has never shown the least ill-feeling toward either the large or small corporations; but that he has been against the tendency of these large corporations to claim the privilege just as they please simply because they are large corporations.

Most public men, we are told, have either purposely or succonsclously helped these great industrial combinations to secure speeial privileges because they did not see a clear opportunity to stop them, while other men, like the late Governor Aligeld, have been violently hostile on general principles. To quote further:

"Now, apart from engaging qualities which make him [the President] agood leader (witness his dexterous management of the Cuban case in Congress), and which make him an admirable Executive (witness his nanagement of Germany in South America, whereby a prince of the royal Prussian house came to the United States on a friendly visit instead of German gunbast going to Venezuela on a hostile errand)—apart from his qualities as Executive and party leader, Mr. Roosevelt has a profound love of fair play, in great matters and in small, which gives promise of a struggle for mastery between him and the great interests which have found in his party a def zential hospitality. He, too, is hospitable, as he ought to be; but the higness of the giant does not, in Mr. Roosevelt's mind, entitle him to more than a giant's share of room.

"In every executive post that he has held he has fearleasly execated laws that easy-going executives had allowed to remain as a dead letter. On the other hand, the virtues of the old Republican managers are negative. The outcome of such a difference of temperament will not only increase the personal popularity of the President, but it will greatly strengthen the party. The moral danger of the party, when it appeals to the conscience of the people, it that it will be regarded as the party of special privileges. The patriotism of the people and their progressive mood blind them to the party, as well as their practical sense and their

#### PHILIPPINE OFFICERS UNDER CRITICISM.

foundness of lawing things brought to pass. The eternal role of the critic and of the complainer which the Democratic party of a too often taken in recent years is tiresome to the active American temperament. But the quality that may always be reckoned on in the American people as a stronger force than their allegiance to any party is their love of fair play.

"It seems likely, then, to come to pass that the temperamental difference between Mr. Rossewell and the old managers of its party and the beneficiaries of special privileges will bring to the party made his leadership the one quality that it stands mount in seed of. And if the party do not gracefully accept his leadership the whyse for its hip, so much the worse for it.

#### HOSTILITIES IN MINDANAO.

HE armed collision between American troops and the Moros in the island of Mindanao last week aroused the apprehension that we might have a new war on our hands in the Philippines just as the old one is supposed to be dying out. Two Moros, it appears, killed one American soldier and wounded another. The American commander demanded that the native chiefs surrender the murderers, but the chiefs refused or neglected to do so, and aif armed force started after them. The Moro villages ran up their war flags, a native force was quickly gathered, and a small battle was fought, resulting in the rout of the natives, who lost seven men. When this was reported to Washington the President cabled General Chaffee to stop the expedition, which is under the command of General George W. Davis; but General Chaffee replied that to withdraw all the American forces would ruin our prestige, and to withdraw part of them would be dangerous, so the President told him to use his own judgment. What the result will be is awaited with considerable interest. General Chaffee expresses the hope that a general war will be avoided.

The Philadelphia Ledger (Ind. Rcp.) says of the Moros:

"Mindano is the largest island in the Philippines except Lazon, being far larger than any of the others. Its inhabitants are principally Mohammedans, and have the Mohammedan belief that death in battle insures them a happy eternity, so that they are most formidable fighters. General Chaffee estimates that are most formidable fighters. General Chaffee estimates that principally the control of the control of the control of the principal of the control of the control of the control of the rifes and the rest with appearance of the control of the second of the control of the control of the control of the subjuzation of Mindano, the end of the war is not very in sight." A number of papers, such as the Philadelphia Press (Rep.), the Rochester Democrat and Chronicle (Rep.), and the Memphia Commercial Appeal (Dem.) favor a strong policy that will compel submission. The Brooklyn Engle (Ind.), too, says:

"The Moros of Mindanao, without seeming cause and undoubtedly for no other reason than the promptings of religious narrowness and hatred, have arisen against the representatives of this nation who were engaged in peaceful surveys of their country, prosecuted with the sole idea of gaining knowledge of its geography, resources, and people, and of establishing closer that the sole idea of the sole idea of gaining knowledge of a goography, resources, and people, and of establishing closer and the sole in the sole idea of the sole in the sole

"We can not recede from the position we have taken in the Philippines. We may better welcome a war that gives us an opportunity to overthrow slavery among the Moros, to punish murder and treachery. These people have carried matters with too high a hand. If they are longing for fight they shall have it,

UNCLE SAM: "This isn't my trade, but if you think you can't get along without it, I guess I can fix you."

— The St. Paul Pancer Press.

May 3, 1902

and in such measure as will satisfy them for years to come. There need be no tears of sentiment in this matter. A figure is on between ignorance and enlightenment; between savagery and civilization. The religious aspect is not significant when the philippines safe, and if the safety of the wise costs the lives of robbers and barbarians, so be it."

The Chicago Tribune (Rep.), however, recommends that the Moros be let alone. The anti-expansionist papers also advocate that policy. Thus the New York Evening Post (Ind.) says:

"The mere fact that President Roosevelt countermanded the punitive expedition shows that we have learned something in our three bitter years of schooling in the Philippines. We are not so terribly anxious now to uphold our prestige in the archipelago, if it means a needless and bloody war. If such orders had been issued to Otis as have now been sent to Chaffee-tho so unfortunately late-there would have been no war in Luzon, . . . It is something to have had the Administration commit itself to the doctrine that our best policy in Mindanao is 'hands off.' The Moros may not govern themselves in all respects as we should like, but they can at least run their own government better than we can do it for them. To interfere is bad both for them and for us. If that maxim were only to be consistently applied throughout the whole archipelago, it would save both us and the natives a world of trouble, and would solve our Philippine problem. We shall have to come to it, in the end, in Luzon and Panay as well as in Mindanao. We are gradually but surely learning the truth of the principle which Cobden laid down in respect to India: 'Its people will prefer to be ruled badly-according to our notions-by its own color, kith and kin, than to submit to the humiliation of being better governed by a succession of transient intruders from the antipodes."

#### THE POOR MAN'S CHANCE IN THE WEST.

THE West is no place for poor settlers, according to Daniel McDonald, president of the Western Labor Union, who avers that the railroad advertisements that say it is "are false and misleading in character, and nothing less than criminal in their effect." Mr. McDonald is sending out a circular letter to the newspapers declaring that "if the plain truth were known, there would be no inecutive for settlers, homeseekers, or working people to come West to improve their conditions"; and this let-

ter is stirring up some comment out in that part of the country, Says Mr. McDonald:

"There is not a desirable tract of untaken land in the Northwest that will not require hundreds, and in most cases theusands, of dollars to make it productive. The statement that the Northwest is a boundless tract of rich, productive, and frietful land open for settlement, and only awaiting the magic touch of the poverty-striken farmer from the East to make it yield forth in abundance all the best products of the farm, is just as false as it is well-sounding. If the rallmon officials who make these statements, and advertise them, were given their just deserts, they would be considered as reminals and tracted as such. Their advertisements will bring years of bardship, privation, West in the expression of security homes or employments.

"We have no desire to give a setback to the development of our country's resources. These resources are limitless,—to men of capital. But to the farmer without means, and the laboring man, there is not the slightest inducement to come West.

"In Bute, in the Cripple Creek district, in the Cœur d'Alenes, in British Columbia, on the Pacific coast, and in the agricultural communities everywhere in the West, there are handreds and thousands of idle men. If the West afforded such exceptional opportunities to homeseekers, settlers, and workingmen, these able-bodied and industrious people would not be found in hundreds and thousands begging for a chanee to earn amer ly lving."

The Cripple Creek Press indorses Mr. McDonald's statements, and says that he tells "the actual conditions." The same paper continues:

"It is to be regretted that conditions are not otherwise. It is a deplorable state of affairs when all who wish can not obtain work at living wages, but there is no sense and no humanity in the circulars to which President McDonald alludes in his letter. Laboring men of the West are not selfash in this matter, nor do they wish to appear as denjug to any one the opportunity for securing profitable employment. It is to prevent suffering and hardship on the part of those who may be misled by erroneous the manufacture of the part of the own may be misled by erroneous for the corn protection that the unions also market.

So, too, thinks the Wallace (Idaho) Tribune, which observes:

"The circular of the Western Labor Union contains very much truth. Eastern people are often induced to avail themselves of

WHICH PIPE? - 7 he Minneapolis Journal.

PEACE NEGOTIATIONS IN CARICATURE.

excursion rates to the West by representations which lead them to believe that they can pick up gold unggets everywhere, that labor is in great demand, and that a great empire of rich agricultural land is free for the taking. No such conditions prevail in the West. There are already more laborers and mechanics here than can find employment. Good land is not on the homestead list, and business enterprises and professional pursuits are fully up to the demand.

Other Western papers, however, take quite a different view of it. The Great Falis (Mont.), Tribane while admitting that "there is no great opportunity for any large number" of "those who work for day's warges," yet maintains that the outlook for farmers with small means is excellent, and declares that "when Mr. McDonald states that there is no opportunity for settlers who wish to develop the lands of these Western States, he states what is absurdly false, and the statement can be excused only on the ground of ignorance of the real conditions." The Denver Krephtician rebukes the Wessern Labor Union rather sharply, Its says:

"The Western Labor Union could be engaged in better business than that of sending out a circular from its beadquarters in Butte, Mont., advising laboring neu and others of small means to remain away from this country. This circular represents that to men of capital the resources of the country are limitless, but that to 'the farmer without means and the laboring man there is not the slightless inducement to come West."

"There may be some localities where there is little need of laboring men, but that the circular in question is a gross misrep-resentation is seen in the declaration that 'in the agricultural communities everywhere in the West there are hundreds and thousands of idle men.' This statement is untrue, and every well-informed man in Colorado knows that, as far as this State is concerned, it is untrue.

"The aggrass of the Western Labor Union to keep out competition in the labor market should not make it instrupersent the West and throw obstacles in the way of its development. It would be well for the laboring men who care for the growth, improvement, and development of the country where they have established their homes to take steps to discipline the Western Labor Union unless it can show that it is not responsible for the circular sent out from Butte.

"Whatever Butte may want, the people of Colorato wish thousands of now settlers to enter this State and make their homeshere. Our people, whether laboring men or capitalists, know that there is room for thousands of farmers to settle upon and cultivate the irrigable lands of our valleys. Let the agricultural population increase, and there will be an increased demand for

labor. Men are in poor business when they make war upon the country in which they live and do that which they know must retard its development. We do not believe the laboring men of Colorado as a class are in sympathy with this Butte movement.

#### LETTERS AND ART.

#### THE HUMANITARIAN NOVEL.

M ANDRÉ LE BRETON, a French critic, writes in a recent issue of the Revue des Deux Mondes (Paris) on the humanitarian motive in fiction, selecting as the basis for his critique two of the greatest humanitarian novels of modern times. Victor Hugo's "Les Misérables" and Tolstoy's "Resurrection," Both novels are, in a peculiar sense, the products of social idealism. They are dominated by "a passion for a more just and beautiful social order": they assume that "the present order is radically unjust, favoring the few and crushing down the many." That Tolstoy himself recognizes the affinity between his own purpose and Victor Hugo's is shown by his statement in "What is Art?" that he regards "Les Misérables" as the most beautiful literary creation of the nineteenth century. "What, indeed, is there in 'Resurrection,'" asks M. Le Breton, "that we do not find in 'Les Misérables'? A fallen creature who rises; paupers. convicts, prostitutes, all the riff-raff and all the victims of social life assembled in one vast picture; hard-hearted bonrgeois, light-hearted judges; avowed revolutionists who attempt to set the world right and who die at the task; hospital and prison scenes; and, more than all that, passing through these frightful or heartrending visions, a great breath of fraternal love and compassion,-such are, in substance, the two books, and the title of one belongs equally to the other." The writer continues;

"Where shall we seek the equivalent of 'Les Misérables'? In the works of English novelists'. We could do so. They felt and expressed emotions analogous to those which overflowed from the heart of Hugo, and at about the same time. The book of Mrs. Harriet Bevelur Stowe, which had such great success and so happily contributed to the abolition of slavery in America, appeared in 1852. 'Adam Bede' and 'Silas Marner,' by George Ellot', date, the first from 1854, the second, 1851. Among the novels of Dickens there is scarcely one in which is not tenderly pleaded the cause of the humble.

"But this breath, this sentiment that I am trying to analyze,

not equally the soul of the Russian nevel? Of all the people of Europe there are usone today more profoundly Christian the the Russian; and as for the democratic spirit, it was strong enough with them, in the nineteenth century, to provoke the event that certain thickers have not feared to like a almost to the French revolution: I refer to the emancination of the serfs.

Nevertheless, admits the critic, the art of the two masters is quite different, and no less great is the difference between their general views of life and society. "The emotion inspired in us by the great scenes of 'Les Misérables' is that experienced by as at the theater when the play represented is by Shakespear or Corneille. The emotion aroused in us by the narratives of Totsory is that which we feel before the spectacles of life, in the presence of real suffering, at the death of some one whom we love." But he asks:

"What matters it, after all, that their ideas differ if they are animated by the same desire for justice and the same pity? What matters it if their art be realism or romanticism, if they both know how to touch hearts? What matters it, in a word, what separates them, if they are united by the highest inspiration of their genius?"

For twenty years, continues the writer, the works of Tolstoy have but continued the spirit of "Les Misérablea." The grand figure of Myriel, who symbolises, in all its gentleness and sublimity, the evangelical morality, does not, with Tolstoy, wear the priest's gown, but is a poor mushik whom suffering has taught to understand and practise the great law of love and pardom. It was Karantied in" War and Peace"; it was Akim in the "Power of Darkness"; in "Resurrection," it is the old workman who sits on the jury with Nekludov, and who says, refusing to condemn any of the accused; "We, ourselves, are not saints: "There is nothing more beautiful in any language, declares M. Le Breton, than the words of Myriel to Valjean:

"Driven from door to door, hooted by the children, barked at by the dogs, as tragical in lis wanderings as Cdipe or King Lear, Valjean finally, panting and defaast, entered the humble dwelling of Myriel. He called himself by name; he showed his passport of freed convict, that passport which served, he said, to cause him to be driven, bunted, from wherever he went. But, instead of driving him away, instead of crying as had the tim at his table and centiv said to him:

"You need not tell me who you are. This is not my house, it is the house of Jesus Christ. This door does not ask of the one who enters whether he has a name, but whether he has a grief.

M. G. CUNNIFF, Literary Editor

Managing Editor.

WALTER H. PAGE,

You suffer; you are hungry and thirsty; be welcome. And do not say that I receive you at my house. No one is a that I receive you at my house. No one is here at home except he who is in need of an asylum. I say to you, to you who pass: you are at home more than I am. All that is here is yours. What need have I to know your name? Besides, before telling me, I already know it."

"The man opened his eyes in astonishment:

"'Truly? You know my name?"

"'Yes," replied the bishop, 'you are called my brother.' " . . . .

"How not acknowledge after this," concludes M. Le Breton, "that is spite of race and temperament two writers in whose writings are to be found so much beauty, in whose writings the sentiment of human brotherhood rises, according to the formula of 'What is Art' to the height of a religious sentiment, are two writers of the same family? Hugo and Tolstoy have again brought into literature the submine, which had not appeared there since Corueille: they have brought it back and they have renewed it. The subline of Corueille vas that of Socio virtue; it resided in the proudest affirmation of the will and the personality. With them the sublime is that of Christian virtue; it resides in the effacement of ego, in the sacrifice and the absolute giving of oncestfu to other, in the prefet love of all the unfortunate and the guilty."—Translation made for Tue Literaay Disease.

#### MILITARISM AS A SUBJECT FOR SATIRE.

EVER since the days of "Don Quavote," "Hadibras," and "Baroa Munchausen"—and probably for long before that time—the soldier has been the butt of the satirist. In our own generation, two of the greatest of American humorists, "Mark Twain" and "Mr. Dooley," have taken keen delight in laying bare the humorous side of militarism. Ernest Crosby's new book, "Captain Jinks, Hero," entiles that writer also to a place among the satirists of war. "Captain Jinks" is a farcical portayal of the ridiculous aspects of military life as viewed by a radical, and it draws a most amusing parallel between soldiery and savagery. In the words of the St. Louis Mirere (April 9):

"It riddles the army fake and the hero pose most unmerrifully and successfully. It shows the harbarity, the inicompopery, the uproarious absurdity of the extreme military ideal, It illuminates, from the author's standpoint, the hyporrisy of this country's protestations as to Cuba, the Philippines, and China. It sticks close to what anti-imperalisis regard a established fact, and it marshals those facts with an effectiveness that is positively brilliant. The whole riddiculous military and maval tradition of honor and distorted ideals is ruthlessly, and yet with much humor, shown up. The begins nature of girty in three days is portrayed with only two smach trath. Even the military of the prover of Mr. Crosby's conic version of our war with Spain and its consequences. The great war fake has to be admitted by any candid reader of these pages."

The Springfield Republican (March 30) is led to an inquiry as to how far satire of this kind accomplishes the ends for which it is called into existence. It says:

"The value of satire as an instrument of reform depends on circumstances. As a rule, satire has only had effect when brief, sharp, and immediate, and breaking upon a condition of public feeling to which it gives point and purpose. In this way it is

-Success (New York).

that caricature has had its chief triumplis, as in the memorable case of Thomas Nast's pictures of the Tweed ring. But caricature is seldon the same thing as satire-when Gilray drew 'the bottomless Pitt,' the caricature was wickedly clever, but it was, for all that, a mere insult. Satire has had its place in literature in all ages, and yet its principal time and field has been in rotting civilizations, as when Juvenal and Persius set forth the Roman decadence; and at such times it served no purpose except. to furnish to future ages the gross record of the vices it could not check or even affect. Satire is indeed largely the weapon of helpless protestation, in its broader reaches; in criticism of manners and current tendencies, especially in personal attack, it has added brilliancy to many a period, as Dryden and Churchill and Pope have shown. If the measures of its effects could be taken, it is not likely that it could be reckoned high among the forces of the world for reform. And yet satire will continue to be a noteworthy exercise of human convictions at times when ardent or cynical souls can not keep silence, and are too impatient for the sober certainty of reasoning. That it contributes something to changes in public opinion is sure, for no human effort falls utterly fruitless.

In a time when nien supposed to have character succumh and conform to the commercialism and militarism rampant in our politics and policies, a voice like Mr. Crosby's, even tho nne unil, is to be welcomed, as a sign that the prophets have not died out from Israel."

Col. Charles W. Larned, a professor at West Point Academy, in a striking paper on "The Modern Soldier" in The Interna-

tional Monthly (April), lays great stress on the absurdities of latterday warfare. He says:

"The grim genius of the Boer war has scratched a plain, if somewhat ragged, line between the centuries, and marked the limit of remantic war-the bonndary of the kingdom of the iridescent Mars and of picturesque slaughter. Feathers and paint as attributes of the soldier are the stage properties of the centuries has hind us, and are be-

Oth CHARLES W. LARNED

coming as absard as the goings and hologoblins of the Chinese military establishment, for they were, togother with the appetite for war, our inheritance from the savage, and while we have not allogether outgrown the latter, we are beginning to appreciate the grotesqueness of war paint and spangles as its livery. Alas for the culrassier, the olihan, the binsart, the greantier of red, of white, and of blue, with incredible head-gear? their splendor has set with the sun of bromarce, and the glory of them will depart with the day of absolution. Their passing began with the by our Civil War, and is sone being consummated by the alert, practical Vankee as he appeared at Sautiago and in the Orient, and the uncould be appeared at Sautiago and in the Orient, and the uncould be supposed to the velocity of the Veldt.

"War is somber, bitter, outrageous, even when unavoidable, and surely the effort to clothe its sinister body in feathers titled, titled, in rainbow huses and extravagant garments, is a grimirony never so absurd as in a day when the citizen covers inself with raiment of black and dun, and shies at color as if it bore the germs of the bubonic plague."

The evolution of military clothes, adds Colonel Larned, "is largely a psychic question, and their morphology ought to be written by a man of scientific mind with a sufficient sense of humor."

# WHAT ARE THE BEST FIFTY AMERICAN POEMS?

M.R. FREDERIC LAWRENCE KNOWLES, the Boston of American poet and author, who complains that "no adequate history of American poetry has thus far a papeared," and that Edmund Clarence Stedman's "American Anthology" is "monstrously unwieldy and ib-balanced, "thinks that it would be a matter of gratification to many readers if we could have "an anthology which should contain not more than fifty or one hundred short poems, but all of these sutfactured by the least suspicion of medicertty." With this ould in view, he submits the following his:

Mr. Knowles, who prints his list in the Boston Evening Transcript (April o) "with full knowledge that he may have very few supporters," proceeds, at some length, to justify his choice. If it be objected that too little prominence is given to Bryant, ho replies that "Bryant, despite his great historical importance, has not anything approaching the literary value that many think." "Austere, elevated, chaste, sincere-he is all of this, but he is always cold, and his style is never brilliant enough to compensate for his chilliness," Edgar Allan Poe is awarded a more prominent place in this list than is accorded to any other poet because" his art is so extraordinary and the music of his verse so resistless and transcendent that his place is secure as the most brilliant lyrist, and, on the whole, as the most original poet America has yet produced." Longfellow's reputation "has gradually been declining since his death," but that of Whittier has "as steadily been growing." Mr. Knowles declares that "the man who wrote ' The Eternal Goodness' is already immortal." adding that "those remarkable stanzas constitute the highest word yet said on religious themes in America."

Emerson had "the foliest flight of any of our poets," but "he was fame in one wing: there was no telling when he would drop to earth." Holmes was "perhaps the greatest writer of occasional verse that ever lived." Whitman is the only poet "who has had no reserves"; yet "high rat he must of his work is wholesome." T. B. Aldrich "has produced probably the largest amount of finished metrical work of any man yet born in this country," and "if, added to his sense of music and color, he had the ethical earnestness and breathful of sympathy of Sill or Gilder, he would have made, out thinks, our foremost poet."

Mr. Knowles states that "the greatest feeling of dissatisfaction

with this list belongs of necessity to the critic himself." He continues:

"There are so many other poems nearly or quite good enough to replace some of those included. For instance, the stirring 'Health' by Pinkney, and Longfellow's 'Weariness,' and 'Chamber Over the Gate', and 'The Tiklo Kines, the Tikle Falls, 'Boker's 'Dirge for a Soldier,' and 'The Black Regiment,' James Aldrich's 'A Oach Bed.' J. B. Brown's 'Thealtat,' Sill's 'Fool's Prayer,' Gilder's splendid Ode 'I am the spirit of the morning sea, 'Markham's 'Man with the Hot,' Bunner's 'Way to Arcaty', Emily Dickinson's 'Parting (Tiklen Jackson's 'Coronation,' Paron's 'Paradiss' Giora, 'Woodberry,' 'The Secret' (not to moniton his fine elegy), Thompson's 'High Tide at Getty Tide at Getty and 'Tide at Getty of the standard of the standard

burg, Hovey's 'Ummanifest Destiny,' Miss Guiney's 'In Leinster,' and 'The Kings,' Field's 'Little Boy Blue,' Mrs. Moulton's 'How Long?' 'The House of Death,' and many of her sonnets.
